: Thanks for your time.
:
: Robert

Personally, I decided to do the hardware mods....my '50 is also 6M16..
I don't believe that 1.07 should cause a problem with the s/w mod though.
The hardware mods are NOT difficult ASSUMING that you have reasonably
steady hands and decent vision.
A fairly fine-tipped soldering iron(grounded-tip prefered, but if not
available, just heat up the iron, then unplug it, and ground it for a
moment, then work quickly, before the iron cools off).
If you are doing the TX mod too, then either a roll of solder-wick, or a
suction tool(either a bulb type, or the plunger type(but note that the
plunger tools tend to produce static, so if you use a plunger type tool,
get a anti-static one) is needed, unless you feel comfortable using a
solder-aid tool or a pick to clear the solder pad(I do NOT recommend
this-it's easy to lift a pad that way).
Both mods(the free-band AND the TX one) took me under 1/2 hour of total
time-and I did NOT use optimum equipment to do the mods.

2799. Simplex Repeater

Newsgroup: rec.radio.amateur.misc

Looking for a Simplex Repeater.. NOT the little ones sold at Radio Shack! A professional unit, (or at least well made) with tail beep, good sampling, and a CW-ID option.....A few companies used to turn these out....Any info appreciated...

Cecil, you still hauling that load of BS around? I'd have thought you'd have dumped that one long ago. Getting kinda smelly isn't it?

I deliberately "isolate" myself on HF when I choose not to do any VHF/UHF work.
Even tho I hold a license for that spectrum.

A No Code Tech deliberately "isolates" himself on VHF/UHF when he decides to pursue a no-code VHF^ license and forgoes HF and learning the code.

So how, then does this create your "caste" system? Both of us DELIBERATELY choose our own course. Each is free to choose whatever part of ham radio we wish to participate within. Your nonsense referring to a "caste" system is just more of the same old, stale load of No Code Agenda Bullchips.

What you can "thank" for the different procedures is the different operational needs. When all stations in an area monitor the same frequency, no one needs call CQ for several minutes while listening stations tune the band looking for someone looking for a QSO, as on HF.

All that is required is to drop your callsign on the repeater or simplex frequency, knowing that if anyone is monitoring who wants to talk, that is enough

You're gonna keep on until you convince all of us that you actually have very little experience at ham radio, in spite of your long years of licensure.

Available? want? impolite? While seeking Field Day QSOs on a repeater
is a liddy thing to do, a quick "CQ from..." isn't impolite at all. If
most hams you know would take offense at that, I'll repeat my suggestion
that you need to widen your circle of friends.

How do you figure? Do you believe that any large group with higher
class licenses avoid the VHF/UHF FM repeaters?

Back in Holland, we always had our cars modified for propane and even in Canada where I live now, this is NOT uncommon. You get a switch over system and a special carburator at a cost of a thousand or more dollars. Now having said this, it seems to me that the cost of modifying a gasoline generator to LP/NG is too expensive and parts may be VERY hard to obtain. It is also interesting that I saw a generator recently which was listed as 13 KW on propane or 10.5 KW when run on natural gas. It seems to make that much of a difference. Depending on the power, it seems that diesel might be the most reasonable. When you find out, could you send me an e-mail ? I'm just about ready to do the same thing. Rene VE6WCA (dutch)

Better check again, Art. Word I got was that congress did indeed give the FCC the authority to require the manufacturers to build consumer devices that wouldn't be susceptable to RFI, but that FCC declined to put that authority into regulations. So there is NO such requirement,

How will you know what repeater you're hearing if you "never use it"?
If you operate in a metropolitan area, there might be several rptrs
on a single freq'y - the only distinction between them will be their
MCW callsigns.

SB PROP @ ARL $ARLP046
ARLP046 Propagation de K7VVV

ZCZC AP46
QST de W1AW
Propagation Forecast Bulletin 46 ARLP046
From Tad Cook, K7VVV
Seattle, WA November 13, 1998
To all radio amateurs

SB PROP ARL ARLP046
ARLP046 Propagation de K7VVV

Solar activity was much higher over the past week. Average sunspot numbers jumped almost 34 points to 118.6 and average solar flux was up about 25 points to 151.2. The average for solar flux for the 90 days prior to this week was 131.3, and flux values were above this level on every day of this week, which is a good sign of an upward trend.

The most active day was Monday, when the solar flux was above 160. Unfortunately for HF operators this was also the second of two days of geomagnetic storms, with Sunday's planetary A index at 68 and Monday's at 78. The high latitude A index was 130 on Monday. It was a weekend of uneven conditions for the ARRL Sweepstakes.

These conditions which meant poor propagation on HF produced some interesting effects on VHF. W1JJM in Rhode Island reported working CX8BE in Uruguay on six meters, and W1LP in Massachusetts heard a beacon from Malawi on six as well. W1LP also reported a whole list of stations around North America worked via aurora on two meter CW.

For this weekend solar activity is expected to retreat a little, with the solar flux on Friday through Sunday forecast at 140, 140 and 138. Planetary A index over the same three days is predicted to be 15, 20 and 10. Solar flux is expected to dip below 130 after November 18, and bottom out around 120 from November 20 through 24.

Flux values should rise above 130 after November 27, and peak below 150 around December 1 and 2. Geomagnetic conditions are expected to be unstable until November 18. This is all based on activity during the previous solar rotation, and new active areas on the sun could appear at any time.

Next week look out for the big Leonid meteor storm on November 17. This should be a peak year in the Leonid's 33 year cycle, and the

best viewing should be over Northern Asia.

Sunspot Numbers for November 5 through November 11 were 137, 142, 144, 137, 107, 81 and 82 with a mean of 118.6. 10.7 cm flux was 152.7, 140.9, 148.5, 152.7, 162.4, 153.8 and 147.1, with a mean of 151.2, and estimated planetary A indices were 9, 22, 25, 68, 78, 6 and 4, with a mean of 30.3.

2820. Re: Alinco DR-605TQ- BUYER BEWARE

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-13 00:00:00 UTC
From: mjgilbert@wcom.net
Message-ID: <364c3ff7.58584029@news.compuserve.com>
Source record: 158061
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

Not seeing the original post, but attempting to figure out what is
going on. I have an Alinco DJ-X10T, DJ-C5T, DR605TQ and
a DX-70TH on order. The DR605TQ is a good radio for the
money. But I think the point that is being made here is DOA or
QA and customer service. My DJ-X10T worked fine out of the
box but I noticed it had holes in its receive (like from 1350 to
1500Mhz). I called Alinco to find out how to do warranty
serivce and packed it up, put a copy of my receipt in the box
and shipped it off to Alinco, 3 weeks later is came back - fixed.
No hassles, no fuss, the only problem I had with them is that on
the service sheet that came back they stated 'no problem found'
but I know they had to reprogram it. Overall, I have been very
happy with Alinco products, I continue to buy them and have yet
to be disappointed.

2823. Sony SW-7700 & Sanjean ATS-803A for Sale

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-13 00:00:00 UTC
From: n2rud@my-dejanews.com
Message-ID: <72hs1ugvb1@nnrp1.dejanews.com>
Source record: 158064

Two portable shortwave radios for sale --

1. Sanjean ATS-803A - $1OO, plus UPS shipping

Larger size (like Sony 2010), full-coverage (150kHz-30MHz), BFO/SSB, digital display, tuning knob, 4" speaker, FM w/ stereo on headphones, 9 memories, 24hr clock/alarm/sleep modes, runs on 6 D-cells and 2 AA-cells, comes with shoulder strap, AC power supply, box and manual. Excellent condition! Did the simple mod to eliminate chuffing - hear the DX. This radio got excellent/best-buy reviews in Passport to World Band Radio. Was also sold as the Realistic DX-440. Discontinued price was $150 ($200).

2. Sony ICF-SW-7700 (no, not the SW-77...) - $50, plus UPS shipping

Smaller, world band radio, AM/FM/LW/SW, digital, tuning knob, has large LCD showing tuning bands (like an analog radio) and also shows digital readout of frequency, includes Japanese FM band below 87 Mhz, runs on 4 AA-cells, has power and mono-earphone jacks, 24hr clock/alarm/sleep modes, 5 memories on each band, comes with nice faux-suede case and manual, no box. Very good condition. This radio makes a nice travel unit or gift for a beginning SWL. Amazingly easy and intuitive to operate.

If interested, send email to me at: ajninno@syr.edu

You've just confirmed that the purpose of field day is some kind of juvenile competition instead of the emergency preparedness drill that it was originally intended to be. _That_ is "liddy".

It does seem strange that Yaesu would provide a band layout apparently tailored to Canada, and then ship the radios with the same setup as the USA version.

Icom, at least, ships radios in Canada with different coverage than in the USA. I've heard of people driving to Vancouver from places in Washington to get the Canadian version of Icom scanners, for example. (Though no doubt the change is just a wire or switch or solder jumper).

Dave

I have an Aerotron Lowband Mobile (Model # APC9RB70SM100)

with diode matrix channel set in it.

I am looking for a diode cutting chart for this radio. and also if you have

cut this for the 6 meter band that's what I would like to do with it.

Any help will be greatly appreciated

Not that that makes any difference. I drove about 40 miles to go take my tests, because to get one close to me I'd have had to wait at least two more weeks. Better to drive a little to take the tests when you're on a mental peak than to wait too long, IMO. Besides, taking them sooner (usually) means you get your license sooner, and get on the air and meet some interesting folks...like the gentleman in the nursing home with whom I just spoke an half an hour ago...sooner as well.
Best of luck. :)

Active Beacon Wizard ++, ABW ++

Greetings,

In case you are unfamiliar with ABW ++, here is a brief description.

ABW ++ displays the currently active NCDXF beacon over a topographic
map, along with the solar terminator. Tools for setting the system
clock, via the net, are also provided.

ABW ++ will download and display up to five selected Space Environment
Center (SEC) solar reports and forecasts. In addition, ABW ++ provides
the comprehensive SEC glossary of solar terrestrial terms. This
glossary, along with report explanations, is provided in
windows-help-file format and may be useful when interpreting the
propagation reports and forecasts.

Screen captures and basic information along with the publicly download
able version, are available at:
http://www.taborsoft.com/softstuff/ABW_Page.html

I hate the ARRL proposal. If the ARRL proposal is accepted by the FCC, this VE is going to resign and turn in his badge. I won't participate in the dumbing down of amateur radio.

Are there any other V.E.'s with honnor and integrity who would be willing to join with me?

>
I think what needs to be done is for a script to modify the files in
the ADMS software, one would then just upload to the radio in the
normal fashion.

I also wonder if anyone knows of a way to make any version of ADMS
software work with the FT-5100. It should be doable with the
propper connector, since this is a clonable radio, but the Yaesu
people told me at the Boxboro convetion that they will not be
developing this since this is not a current model.

What do you think of the VEC Conference's Proposal? It's HIGHLY unlikely
that the FCC will embrace the ARRL Proposal they might use something but not
everything so, I doubt you will have to turn in your badge.

Wouldn't your resignation dumb down amateur radio even farther?
How about advocating more relevant written exams instead?

FCC LEVIES HEFTY FINE ON JERSEY HAM

The FCC has levied a $7500 fine on a New Jersey ham who interfered with a net operation on 40 meter SSB. James C. Thompson, KA2YBP, of Waretown also was ordered off 40 meters until further notice after the October 18 incident. The case against Thompson, 58, stemmed from interference complaints from other amateurs, including the Association of North American Radio Clubs (ANARC), which conducts a Sunday morning net on 7240 kHz.

The FCC charged Thompson with illegally retransmitting programs from a Standard Broadcast (AM) station on 40 meters and willfully interfering with the net. The FCC also said Thompson failed to properly identify.=20

The FCC issued an Official Notice of Violation October 21. In replying to the NOV, Thompson admitted the violations, the FCC said November 9. "Applying the Forfeiture Policy Statement and statutory factors to the instant case, we have determined that a monetary forfeiture in the amount of $7,500 is warranted," the FCC's notice said. Thompson has 30 days to pay the fine or appeal it.

The Thompson case marked the Commission's first amateur enforcement action since the FCC announced it would consolidate amateur enforcement within the Compliance and Information Bureau. The CIB's legal advisor for enforcement, Riley Hollingsworth, K4ZDH, says he's spoken with nearly 100 individuals about enforcement complaints or issues since the FCC's latest enforcement initiative began. The FCC expects additional amateur enforcement cases to develop as a result of calls to the Amateur Enforcement Line, 202-418-1184.

NEW MINI-SPUTNIK LAUNCHED FROM MIR

Russian cosmonauts launched a second mini-Sputnik satellite November 10 during a spacewalk from the Mir space station. The launch of Sputnik 41--also being called RS-18--comes just over a year after the launch of Sputnik 40, which commemorated the launch of the first artificial Earth satellite by the USSR in 1957.

Among the first in the US to report hearing the new satellite was Ken Carlstrom, N1WED, in New Hampshire. He reported hearing Sputnik 41 from approximately 0604 to 0609 UTC on November 11 at 145.8145 MHz.

The newest Sputnik was tossed by hand at the start of the spacewalk by cosmonauts Gennady Padalka and Sergei Avdeyev. According to an AP report, Padalka told Avdeyev to "toss it gently toward the moon."

Sputnik 41, which arrived on Mir aboard a Progress supply rocket late last month, was financed by the Aeroclub de France to mark its centennial. Two Sputnik 40 models were transported to Mir last year, but only one was launched. The other remains aboard the space station.=20

Like its predecessor, Sputnik 41 is just under 8 inches in diameter and weighs almost 9 pounds. It carries a 200 mW transmitter that transmits on or about 145.812 MHz (=B1 5 kHz and Doppler shift). The spacecraft has no solar cells. Its expected operational lifetime is approximately 30 days.

Sputnik 41 broadcasts pre-recorded voice greetings in three languages, French, English, and Russian. The Russian-accented English greetings say "1998 was the International Year of Air and Space" and "International Space School Sputnik Program." The French and Russian messages convey the same greetings. The new spacecraft provides a "bip-bip" beacon. The frequency of the audio tone indicates the satellite's internal temperature. The tone is transmitted every 90 seconds.

Sputnik 41 reception reports go to AMSAT-France, QSL Spoutnik 41, 14 bis rue des Gourlis, F-92500 Rueil-Malmaison, FRANCE. The 1998 International Year of Air and Space page is at http://www.ccr.jussieu.fr/physio/Satedu/sputnik41.html.

ARRL HAM GEAR ARRIVES IN HONDURAS

Portable and mobile VHF transceivers shipped by the ARRL last week have arrived in flood-stricken Honduras to help in the ongoing relief effort.

"Thank you for all your support and help on this great ordeal our country has been forced to undertake," said Omar Paredes, HR1OP, in an e-mail message November 11 to ARRL Headquarters. Paredes is secretary of the Club de Radio Aficionados Central de Honduras (CRACH) in Tegucigalpa, which accepted the equipment.

Hams in Honduras who still have operational stations or gear have been using Amateur Radio to maintain communication, since telephone service is erratic or out completely. "We are working very hard trying to provide communication within our country as well as with families abroad that need to know about their relatives," Paredes said. Stations in Honduras have been operating off batteries or from gasoline generators.

The League also sent a 2-meter repeater, diplexer and antenna to a club in La Ceiba to restore communication between the mainland and the islands of Roatan and Guanaja. The equipment is part of the League's disaster communications inventory, and some of it has seen service in other weather disasters.=20

Relief agencies from the US and elsewhere are undertaking massive efforts to feed, clothe, and shelter the thousands of flood victims, and some agencies have been making use of Amateur Radio for communication. The storm left more than 10,000 dead and one million homeless in Honduras, Nicaragua, Costa Rica and Guatemala. The storm left the communications and public utilities infrastructure in shambles.

The Salvation Army Team Emergency Radio Network (SATERN) continues to operate on HF. The Amateur Radio net is providing an information service to help families search for missing relatives, relaying information between Central and North America. SATERN also is handling logistical and emergency needs traffic. The disaster has revived the phone patch in this Internet era. "Since my involvement, I've handled about 10 phone patches between the folks in Honduras and various places from Maine to Washington state," said Harry Bryant, AA2WN, in New Jersey, who's been active on SATERN. Charles Lassiter, KD5AHW, in Texas, reports he and Bob Sanford, KC5SMC, have been relaying traffic to and from the Mercy Ships/Mercy Ministries in Tyler, Texas, to their orphanage and mission in Honduras.

Individuals in the US with relatives in the affected area may submit a health-and-welfare inquiry via e-mail to SATERN to be relayed via Amateur Radio. Requests should include the name(s) of the person(s) being inquired about; their last known address; your name, address, and telephone number; and your e-mail address. Send your inquiry to

qnwa4bzy@mindspring.com. A form also is available on the SATERN Web site at http://www.angelfire.com/il/satern411/emailfrm.html.

The FCC declared the SATERN 14.265 MHz frequency off-limits to hams who are not involved in handling emergency traffic. The mandatory communications emergency was declared to support the Central America disaster relief effort. Under the order, amateurs are required to refrain from using 14.265 MHz (plus or minus 3 kHz) unless they are taking part in the handling of emergency traffic. The order remains in effect until rescinded.

LEONID SHOWER: THIS COULD BE THE BIG YEAR

The impending Leonid shower on November 17 has generated both interest and concern within the Amateur Radio community. Leonids get their name from the constellation Leo, which appears to be their source in the sky. The meteors originate from debris and dust in the wake of the comet Tempel-Tuttle. They show up on the same day every year, and approximately every 33 years, the shower can reach storm proportions.

The last major storm spectacle was in 1966, when upwards of 150,000 meteors per hour blazed through Earth's atmosphere. This year--number 32 of that cycle--could be the big one, some experts believe, with the Leonid shower producing as many as 100,000 meteors per hour as Earth passes through the orbiting meteor stream. The shower--or storm--creates a bonanza of VHF meteor-scatter propagation for amateurs, especially on 2 meters. It also presents an interesting sky show. But because of the predicted intensity of this year's Leonid shower, some are worried that satellites might be at risk.

During their recent spacewalk, the cosmonauts aboard the Russian Mir space station attached a meteorite trap on the spacecraft to collect data on the Leonid storm. While it's not believed that the storm will threaten Mir, the cosmonauts will board the Soyuz escape capsule during its peak, just to play it safe. Some communication satellites and even the Hubble Space Telescope will be positioned to minimize any potential effects from impact.

NASA scientists will conduct unprecedented, detailed aircraft and ground measurements of the Leonid meteor storm. A main focus of the NASA investigation is to learn the composition of the debris and what happens to it when it enters Earth's atmosphere. NASA's goal is to understand how extraterrestrial materials may have helped to create the necessary conditions for life on Earth.

Meteors and meteorites enter Earth's atmosphere all the time. An average observer might spot a couple of dozen of them with the naked eye on any given evening. Increasing the number to the proportions of the expected November 17 shower does raise the statistical possibility that a chunk of space debris could strike and damage a satellite, "which is something of a possibility at all times anyway," says ARRL Technical Information Service Coordinator George Beloin, WA1PIX. Only a small particle could

cause damage to a satellite.

North American viewing opportunities are not optimal this year, since our side of Earth likely will be in daylight when it passes through the meteor stream. The best viewing sites will be in China and Southeast Asia. In any location, the best viewing should be from around 1 AM local time until dawn, after Leo has risen in the eastern sky. The actual "peak" of the shower or storm lasts only a few hours, experts say, and predictions vary widely.

For more information, see "The Coming Meteor Storm," QST, October 1997, page 98, http://www.skypub.com/sights/meteors/Leonids/98preview.html, and http://www-space.arc.nasa.gov/~leonid/.--thanks to NASA

FCC SHUTS DOWN FOUR HF PIRATES

The FCC has shut down four unauthorized HF broadcasters in Massachusetts, Illinois, Texas, and California. The stations all transmitted on 6955 kHz. Two of the operators are radio amateurs, according to an FCC spokesperson, who said the ham licenses "are definitely in jeopardy." The two hams were identified as 41-year-old Richard F. Jurrens, KC5RGK, a Technician licensee who lives in Katy, Texas, and 46-year-old Henry Lee "Hank" Landsberg, WB6MEU, an Advanced class licensee who lives in Sierra Madre, California. The names of the others cited were being withheld pending further official action.

In making the busts, the FCC's Columbia, Maryland, Operations Center coordinated and provided information to FCC agents from the Boston, Chicago, Houston and Los Angeles offices. FCC inspectors from those offices then performed on-site visits to the unauthorized stations.

With the exception of certain low-power Part 15 devices, broadcasting on the HF bands is not authorized without a station license. Under the Communications Act, violators may be subject to penalties up to $11,000 and the equipment used may be seized and forfeited by court order. Unlicensed operators also face criminal fines of up to $100,000 and/or imprisonment for up to one year, or both, for a first time offense.

DRAKE ENDS FACTORY SERVICE FOR OLDER GEAR

R. L. Drake Company has announced it no longer will provide factory service for most of its older Amateur Radio and marine equipment. The list includes much--but not all--of the popular 4-Line equipment.

Veteran Drake Service Manager Bill Frost, WD8DFP, says it's getting harder to get parts for the older Drake units. "The big switches, you can't buy those things anymore," he said this week. "The big electrolytics are not available."

Frost, who's been with Drake for 32 years, said his department has "reached a point where we cannot service the older products in the manner to which our customers have become accustomed." Technicians familiar with the older, mostly tube-type gear also are in short supply

these days. "Our technical expertise on the older equipment has gradually been diminished by the loss of long-time employees due to retirement," Frost said. He also said the cost of repairs can easily exceed the cost of the equipment.=20

The company has posted a list on its Web site at http://www.rldrake.com/tech/Outofservice.html of items that it no longer can service. The list includes The R-4 and R-4A receivers, the popular T-4X, XB, and XC HF transmitters, and the TR-3 and TR-4 transceivers, as well as most of the power supplies for those units, the SSR-1 receiver, and the TR-22, 22C and TR-33C 2-meter transceivers. Items on the list and sent to Drake for repair will be returned to the sender unrepaired accompanied by a bill for shipping, handling, and applicable COD fees.

Frost said Drake is still servicing "to an extent" the R-4B and R-4C receivers as well as the TR-5 and TR-7 transceivers. The company also still will provide factory repair service for the L-4, L-4B and L-7 linear amplifiers.

Drake says its supply of unique parts is limited, but it still might be able to supply individual owners with needed parts for do-it-yourself repairs. Frost encouraged Drake owners to call or write if they have any questions about repair or service of a particular piece of equipment--even if it's already on the list.

Call Frost at 513-746-4556 or e-mail him at Bill_Frost@rldrake.com. Frost's mailing address is Bill Frost, R.L. Drake Co, Service Dept, 230 Industrial Dr, Franklin, OH 45005.

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was much higher over the past week. Average sunspot numbers jumped almost 34 points to 118.6, and average solar flux was up about 25 points to 151.2. The average for solar flux for the 90 days prior to this week was 131.3, and flux values were above this level on every day of this week, which is a good sign of an upward trend.

The most active day was November 9, when the solar flux was above 160. Unfortunately for HF operators this was also the second of two days of geomagnetic storms, with the planetary A index at 68 on November 8 and 78 on November 9. The high latitude A index was 130 on November 9. So, it was a weekend of uneven conditions for the ARRL November Sweepstakes.

These conditions, which meant poor propagation on HF, produced some interesting effects on VHF. W1JJM in Rhode Island reported working CX8BE in Uruguay on 6 meters, and W1LP in Massachusetts heard a beacon from Malawi on 6 as well. W1LP also reported a whole list of stations around North America worked via aurora on 2-meter CW.

For November 13-15, solar activity is expected to retreat a little, with the solar flux on Friday through Sunday forecast at 140, 140 and 138. The planetary A index over the same three days is predicted to be 15, 20

and 10. Solar flux is expected to dip below 130 after November 18, and bottom out around 120 from November 20 through 24. Flux values should rise above 130 after November 27, and peak below 150 around December 1 and 2. Geomagnetic conditions are expected to be unstable until November 18. This is all based on activity during the previous solar rotation, and new active areas on the sun could appear at any time.

Look for the big Leonid meteor storm on November 17. This should be a peak year in the Leonid 33-year cycle, but the best viewing will be over Northern Asia.

Sunspot numbers for November 5 through November 11 were 137, 142, 144, 137, 107, 81, and 82, with a mean of 118.6. The 10.7-cm flux was 152.7, 140.9, 148.5, 152.7, 162.4, 153.8, and 147.1, with a mean of 151.2. The estimated planetary A indices were 9, 22, 25, 68, 78, 6, and 4, with a mean of 30.3.

CLARK MAGNESS, NI1U, SK

Clark Magness, NI1U, of Guilford, Connecticut, died November 7 after a long illness. He was 47. Magness had served as Connecticut SEC since 1991 and had been an ARRL member for 16 years. " He was a dedicated ARRL volunteer who did a lot to develop the ARES program here in the state," said ARRL Field Services Manager Rick Palm, K1CE. Connecticut Section Manager Betsey Doane, K1EIC, expressed her sadness at Magness' passing. "His life was certainly a wonderful gift to all of us," she said.

IN BRIEF:

* This weekend on the radio: The Japan International DX Contest (SSB) is November 13-15 (contrary to the announcement in November QST). The Worked All Europe Contest (RTTY), the OK/OM DX Contest, and the Peace Country Amateur Radio Club QRS Contest are November 14-15. Just ahead: The ARRL November Sweepstakes (SSB) along with the North American Collegiate ARC Championship (SSB; see SS rule 6, October QST, page 118) are November 21-22. See November QST, page 97, for details.

* Vanity update: The FCC in Gettysburg reports that vanity call sign applications received through October 22 have been processed. In the latest run, November 12, 119 hams got a new call sign. Applications from another 149 hit the work-in-process (WIPs) stack, however. The FCC says it received 1412 vanity applications during October, down only slightly from September when the fee dropped to $13. More than 80% of applications filed in recent months have been electronic. Over the more than two-year life of the current vanity call sign program, the FCC has received more than 36,250 applications for new call signs. One available estimate suggests that between one-half and two-thirds of those applications resulted in a new call sign.

* Product review archive expanded: The QST Product Review columns for the 1980-1989 decade have now been added to those available on the ARRL

Members Only Web Site archive. Files are in Adobe Portable Document Format (.pdf). Viewing past Product Review columns requires Adobe Acrobat, which can be downloaded free of charge.

* Happy Birthday, Mir! The Russian Mir space station celebrates its 10th birthday this month. Mir, which has been home to several Amateur Radio operators over the years, including several US astronauts, began functioning November 6, 1988. Over the intervening years, more than 60 cosmonauts and astronauts aboard Mir have made thousands of radio contacts with earthbound hams. A message from Sergei Sambourov, RV3DR, chief of the Cosmonaut Amateur Radio Department, expressed thanks to all who promoted and participated in ham radio communication with Mir. QSLs for R0MIR or R0MIR-1 go to Dave Larsen, N6CO, PO Box 1501, Pine Grove, CA 95665. Requests should be accompanied by a business-sized self-addressed, stamped envelope with appropriate return IRC(s) or postage.--MIREX

* Hiram BBS, on-line service accounts terminated: Effective January 1, the ARRL will terminate the Hiram Bulletin Board System (860-594-0306) because of declining use. Effective immediately, the ARRL has canceled its on-line service accounts with Compuserve and America Online. These services were deemed no longer necessary because of the availability of the now-expanded ARRLWeb, http://www.arrl.org/ and e-mail service. Members wishing to contact ARRL Headquarters via e-mail should direct correspondence to hq@arrl.org. Individual staff members may be contacted directly by using either <call sign>@arrl.org (ie, n1rl@arrl.org) or <initial+last name>@arrl.org (ie, rlindquist@arrl.org).

* Florida public service conference set: The ARRL Florida Regional Public Service Conference is Saturday, November 21, 1-5 PM, in conjunction with the ARRL Southern Florida Section convention (see November QST, page 94) at the Florida State Fairgrounds Expo Hall, Interstate 4 and US Route 301, Tampa. The main conference objective is to identify specific telecommunication needs of served agencies and the corresponding ARES capabilities over the next three to five years.--Rick Palm, K1CE

* QST Cover Plaque Award: The QST Cover Plaque Award winner for October was John A. Hansen, W2FS, for his article "Using PIC Microcontrollers in Amateur Radio Projects." Congratulations, John!=20

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.=20

Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

=3D=3D>How to Get The ARRL Letter<=3D=3D

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.=20

To subscribe, unsubscribe or change your address for e-mail delivery:=20 ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

2849. Re: City to pass ordinance to fight CBers

Newsgroup: rec.radio.amateur.misc

Good Evening;

May I suggest that when you say that "an ordinance from Wisconsin that has passed review by the courts." you must advise "which" courts have passed review? I assume that the statute was tested in the superior level of a county court in Wisconsin and the court found for the defendant, namely the city or county. However, you have not stated whether or not the appellate process has been completed.

This situation sounds to me, even though a rider from Senator Feinstein has passed the senate and presumably been signed into law by the president, quite unconstitutional in that the FCC has preemption in this matter. There is a conflict of interest in a duly authorized federal entity, the FCC, having its duties usurped by a local administration under the guise of federal protection to administer the federal law as set forth by said federal entity, no matter what the legislative system gives it permission to do.

Imagine, if you will, the Los Angeles Police Department being given permission to execute INS policies and procedures with reference to illegal aliens, by an act of Congress. The LAPD wouldn't do it for fear of civil litigation brought by defendants. The same thing will probably occur in your city. The proper way to defend against this situation is to not go to meetings and decry the new statute proposed by the city but to merely suggest to the city fathers that should any act of local law enforcement cause a loss to any citizen in that community by said act, there would start a groundswell of lawsuits against the city under numerous grounds by said defendants.

I do not believe that a small city would want to NOT consider this issue in that light.

Sincerely,

Paul, K6PY

2850. RS Simplex Repeater Controller

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-13 00:00:00 UTC
From: Clay Leister <cleister@fast.net>
Message-ID: <72ipu9hnl1@news1.fast.net>
Source record: 158091

The Radio Shack Simplex Repeater Controller (19-345) works pretty well for the money. It is fun to use with the small credit card HT's having an output of from 100 to 300 mw. It is definitely a range extender of convenience.
Powering the HTX 202 and Simplex Repeater Controller using AC can be a problem because of the grounding differential problem. I solved the problem rather simply by trickle charging the batteries.
Enjoy.
Clay/w3jey

>I also wonder if anyone knows of a way to make any version of ADMS
>software work with the FT-5100. It should be doable with the
>propper connector, since this is a clonable radio, but the Yaesu
>people told me at the Boxboro convetion that they will not be
>developing this since this is not a current model.

The ADMS-1 software isn't a single program. It is a whole suite of
programs, with separate binary images for each different model of
radio: FT-10, FT-40, FT-50, FT-11, FT-41, FT-51 (and probably VX-1
in the later versions).

So the chances of making any one of those programs work with a
FT-5100 is essentially nil - they're so specific to one radio.

On the other hand, the cable that comes with ADMS-1 contains the
level shifters needed for the FT-50 and FT-51, and it's a reasonable
guess that the FT-5100 uses the same hardware voltage levels. So
you'd have the hardware you need, and merely need to figure out

- the protocol for transferring the cloning info from/to the radio

- the meaning of the data in this memory image once you've got it.

Once you understand that, you could write your own software.

Dave

What is the problem? Can't you use a common ground for the radio and the repeater controller? Usually, the negative of the supply voltage is connected to circuit ground which is common to the two devices through the audio cables. (But I don't have either this radio or this repeater controller, so I' don't know about them).

I have no idea if the mode I charted out is really intended for Canada. I have always been, and will remain, under the assumption it is because the frequency bands seem to match. If someone out there really knows what it's for, please tell me so I can properly identify the country code. Until then, I'll continue calling it the "Canadian mode" until I'm corrected.

> Icom, at least, ships radios in Canada with different coverage than in

> Washington to get the Canadian version of Icom scanners, for example.
> (Though no doubt the change is just a wire or switch or solder jumper).

Acually, it's now illegal for companies to sell radios that can be reconfigured that easily in America anymore. Th eradios that continue to be sold that can be modified are availiable under the grandfather clause. But this only covers mars/cap modification. That's why everythine else like freeband and cell reception on all other bands have been taken out of the newer ft-50's, but you can still remov ethe blob of solder for mars/cap reception.
For almost all newer radios, if you want mars/cap TX, or European mode RX, you have to have the whole CPU replaced.

> normal fashion.

Acually, there is no way to do that. I've allready thought of it. The ft-50 isn't designed for a computer interface, it's designed for a cloning mode to hook two ft-50's together and copy their memories. However, Yaesu had made a cable that let's your PC emulate the second FT-50 letting you do the same as if you had two ft-50's head to head.
This is why you have to press buttons on the ft-50 to start the transfers and put it into transfer mode. If it was designed as a true computer interface, you woiuld just need a straight through cable with no electronics and the computer would start the transfers, no need to press a single button on the ft-50, other than the power button to turn it on.
If a prograsm was to be written it's need to do the following sequence, with on-screen instructions to aide teh user:

1.) Power on into clone mode.
2.) press send button to send memories to radio.
3.) Software on computer modifies the memories sent over to teh desired country code.
4.) Press recieve button on radio and software button sends memories back to radio.
5.) (this is optional) turn off radio, turn back on but back in clone mode, and send memories back out to the computer again.
6.) (again optional) Software on computer confirms that change was successful.

This entire process only takes less than a minute, and your old memories aren't affected in any way. What cound be simpler?

You an demand that the cable company provide
a cable feed that is free of interfering signals. Now
that assumes the interfering signal is actually in
the cable signal entering your house AS OPPOSED TO
the cable signal being clean and your inside wiring or your
TV being suseptical to the interfering source.

>Is Canadian mode only available in recent FT-50s?

What the mode basically does is allow full access to the receive frequencies in the range that that FT-50 can hear. Thus I can hear some 220 repeaters, especially strong ones, and I suspect although I've never bothered to check that I could hear cellular conversations. Jack Dragon's webpage details how to do the Canadian mod with the ADMS software, and once I got the instructions straight from Jack, I can reliably change my FT-50 to any of the acceptable modes, including the infamous Freeband mode. Frankly, I'm not interested in keying up a fire department repeater, so the Canadian mod which only changes receive, but otherwise is the same as the U.S. mode apparently is the one for me. I can listen to what I want without fear of keying up somewhere I shouldn't.

I have a Yaesu 5600B rotor which hasn't been used, but stored for a
few years, during setting up the Az rotor stopped (looks to be at or
near limit). Are there any known problems or components before I pull
it apart and start hunting?

TIA

> So we just accept this?

Fix the TV. It's the TV owner's problem; if the CBer, or ham, etc
is operating legally, then it's legal.

> I would assume my right to operate a passive device _inside_ my home is more
> to be defended than a person's right to transmitt?

I have a license to operate an amateur station. If I operate it
with the allocated frequency bands with less than or equal to the legal
power limit, I am operating legally -- it is your problem.

It is not hard to create TVI; even my station here (max power is
about 25% of the legal limit here, which is only 120W on FM
anyway) causes interference to the TVs in the house. Yet my setup is legal.

Lots of veterans on amateur radio, judging from the number of old war
stories
one can hear on any given day while tuning across the bands. That and
the
always-popular subject of health ailments, caused by old war wounds
and
injuries.

Just another example of how the average age of amateur operators is
increasing
and how ham radio is (literally) dying off.

2897. Story of a Diehard DXer

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-14 00:00:00 UTC
From: N7RCM@POBOX.COM
Message-ID: <364d2203.8996083@news1.coam.net>
Source record: 158017

THE DIEHARD DXER

5:00am - Fellow DXers arrive. Crawl out of nice warm bed.
5:30am - Toss all gear into truck
5:45am - OOOPPPSSS, get gear out of neighbor's truck, and put it in yours.
6:00am - Get speeding ticket while hurrying to get to the mountain.
7:15am - Get to "the site," near top of mountain.
7:16am - Start unloading gear.
7:20am - Get poked in eye with 20M vertical by fellow DXer.
7:50am - Arrive at hospital to get eye patched up.
8:30am - Get another speeding ticket while heading back to site.
8:45am - Arrive back at site. Unload antennas yourself this time.
9:45am - Hike up to mountaintop. Pass out from exhaustion.
9:50am - Wake up to smelling salt, and laughter from fellow DXers.
10:00am - Put up antennas, and set up rigs.
10:15am - Fire up rig, call CQ for half an hour; no replies.
10:46am - Hook up coax to rig...
10:48am - Realize that finals are wasted in main rig.
10:50am - Hook up back up rig, this time with coax.
11:00am - Yell CQ, rare VP8 comes back; antenna falls down...
11:15am - Wake up to smelling salt, fellow DXers shaking heads.
11:30am - Guy Antennas.
12:05pm - See long list of QSOs made by fellow DXers.
12:06pm - Notice rare VP8 in fellow DXers logbook.
12:07pm - Beat fellow DXer over head with logbook.
12:09pm - Restrained by rest of DXpedition team...
12:30pm - Back to rig for another attempt.
12:35pm - Nearby lightining strike kills receiver. Notice wet pants...
12:36pm - Look for shelter
12:38pm - Find Cave!
12:41pm - Watch antenna get struck by lightning while hiding in cave.
12;42pm - Wish it was fellow DXer's antenna, or him that was struck...
12:45pm - Realize you're not alone in cave...
12:46pm - Pick up rally big rock...
12:47pm - Mauled by large angry bear.
12:50pm - Get pulled out of cave by fellow DXers.
1:05pm - Finally get talked into receiving medical treatment.
1:30pm - Arrive back at hospital.
1:55pm - Receive series of painful rabies shots, and multiple stitches.
2:30pm - Get out of hospital and return home.
2:35pm - "Explain" stitches and eyepatch to wife.
3:00pm - Realize gear is still up on mountain, with bear.
3:01pm - Wish fellow DXers were still up on mountain, with bear...
3:03pm - Consider taking up drinking.

7:00pm - Get phone call from DXer buddies.
7:05pm - Agree to go on DXpedition again tomorrow...

This is not my original. I saw it in a Feb '98 issue of World Radio and thought it would be neat for it to be sent around again.

Hello I have a Yeasu FT 767 GX hF rig that I would like to trade for a TS 930 or 940 HF rig with MC 50 or better mic. The Yeasu comes with the 2 meter module and matching speaker. The rig is a 7.5 on a scale of 1 to 10 and the light behind the meter needs to be replaced. It also comes with the MD-1 mic. I use this rig on ten meters and it works great! I want my station to be all Kenwood. I have a 930 I run on 40 and 75 and would like to run a 930 or 940 on ten
too. Thankyou for
reading.

About half the amateurs using HF disagree with you, for CW is the second-most used mode down there. It's the only mode common to all HF-licensed hams. It's the only mode that's allowed on any HF amateur frequency.

>and should be eliminated,

I believe commercially-made ham gear should be eliminated; that in turn would eliminate the appliance operators who don't even know how their radio works, and have no inclination to learn.

Pretty radical thinkers, you and I.

The DSP-599zx works great on SSB. The automatic hetrodyne elimination feature works completely (no tuner-uppers heard at all). The adjustable agressiveness random noise reduction is just that, adjustable, and works very well indeed (and slightly rolls off highs as you crank it up). My DSP-599zx works so well that I can copy 40m SSB in the summertime, even in the midst of thunderstorm season. The adjustable high pass and low pass knobs work really well, so I can chop out noise and taper the band pass down to about 1.3 kHz (where I start to lose intelligibility). The DSP-599zx works as well as or better than my 1.9 kHz SSB IF filter in my ICOM 706 Mk II. I even use it with the full 5 kHz bandwisth for listening to shortwave broadcasts.

Here's a lesson in Economics 101 for you: businesses tend not to "flush" their paying customers. I am a paying customer of AOL; you are (apparently) not. Therefore, "AOL management" could care less as to your personal opinion of my comments on this newsgroup.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Here is a good poem to read on 2 meter repeaters... or any other
frequency for that matter.
You don't have to sing it... just read it aloud.

Tinkle Tinkle Mr. Starr

Tinkle, tinkle, Mr. Starr,
We don't wonder what you are.
All that money in your paws,
Subvert the constitution laws.

Tinkle, tinkle, Mr. Starr,
How'd you ever pass the bar?
All the little school kids know!
You are freedom's biggest foe.

Tinkle, tinkle, Mr. Starr,
You've gone way, way, way too far.
Up above The Beltway sky,
Sling mud in The Peoples' eye.

Tinkle, tinkle Mr. Starr,
Dipping in the cookie jar!
Democracy and Freedom burn!
Checks and balances: Return!

Tinkle, tinkle Mr. Starr,
Now we know just what you are!

>passed the senate and presumably been signed into law by the president,

Latest information from my Congressional "watchdog" was that
the House was supposed to but didn't get around to it in time
so it died again. With that being the case the "locals" have
ZIPPO authority to enforce FCC rules but this never stopped
them from "diss-ing" the Feds.

>quite unconstitutional in that the FCC has preemption in this matter.

Radio law enforcement is not mandated (but can be authorized)
under the U S Constitution as an exclusive Federal matter, so
the FCC's preemption can be overridden by Federal - but not
State - legislation, especially when the Feds are more than
willing to let the "locals" do the dirty work at the latter's
request.

The FCC can't have it both ways, though. If radio signals are
declared to be interstate in nature, the FCC HAS to jealously
protect their jurisdiction over ALL radio regulation. They
did so in a case about 15 years ago where the State of California
tried to grab jurisdiction over intrastate cellular radiotelephony.

The U S Supreme Court ruled that California could only regulate
intrastate RATES, just as they regulate intrastate wire telephone
rates, but the "radio" operation - specifically determining who
can offer service - is a Federal responsibility.

The difference is, of course, is that in the California case
the FCC wanted to retain preemption but in the CB situation no
one from the Chairman on down wants to do CB enforcement which
is a dirty, time consuming, manpower-intensive, thankless, and
at times downright dangerous activity. (I supervised that
activity in the 60s, 70s and 80s so I know whereof I speak).

>There is a conflict of interest in a duly authorized federal entity, the
>FCC, having its duties usurped by a local administration under the guise of
>federal protection to administer the federal law as set forth by said
>federal entity, no matter what the legislative system gives it permission
>to do.

See above. The Congress can do it. The State Legislatures cannot.
No one at the FCC wants to turn it into a turf war.

I am looking for information on how to obtain a French Polynesian (FO) reciprocal license via mail.

The info on the ARRL website basically says to apply in person once in Papeete, Tahiti. But I am just stopping in Papeete only briefly before traveling to the outer islands. I was able to apply for and receive my FO recip via mail a number of years ago, on a previous visit.

If anyone can provide a current mailing address and procedures for applying for an FO reciprocal license, I would certainly appreciate it.

Thanks, Kevin

Message-ID: <19981113210616.26557.00000758@ng-fc1.aol.com>
Source record: 158101

Hello there. I am looking to trade all of the below equipment plus cash for the original ICOM 706 (MK1). The ICOM 706 has been my "dream rig" ever since it came out in 1995, but since I'm only 15 I haven't been able to afford a unit. I am hoping to upgrade soon so I can take advantage of HF (I'm a no-code Tech now.) Anyway, here's the equipment I have:

1. ICOM W32A Dual Band HT/Scanner combo. Currently ICOM's top of the line full power HT. Dual VFOs with two frequency readouts at same time, digital S-meter for each, (you can listen to 2 freqs at same time) 5 watts output, 200 memory channels, Alphanumeric Tags, PL Encode/Decode/Scan (scan is VERY handy!) , full DTMF Keypad, DTMF memories, battery voltage readout, Backlit LCD and Keypad, ICOM BP-180 battery (very good condition). Also rubber duck antenna, the optional DC power cord, and the optional RadioShack Speaker/Mic, ICOM BC-110A charger, and of coarse the manual. I'll also throw in the optional center loaded coil telescopic portable Radio Shack antenna which you can replace with the rubber duck when needed. Wide 108-999 MHz receiver (except 200-300 MHz and Cellular.) Transmit 140-150 MHz and 440-450 MHz (MARS/CAP done, but you can also enable 118-195 MHz TX on the VHF side and 420-510 MHz on UHF with another mod, info included, with a .JPG of the mod,) plus DOS and WINDOWS programming software and schematic of the simple OPC-478 cable you can build for PC programming of the W32A. As an added bonus, the radio also has the manual already programmed into the ROM of the unit, you simply hold down the GUIDE button and then press any key or go into any mode and you get a full explanation of that function scroll across the bottom of the LCD screen (EXTREMELY handy when traveling!!!) Small size for a 5 watt unit, only 2 1/4(W) x 5 13/32(H) x 1 5/16(D) in. Serial number 03375. Everything in very good condition and works great. I checked in my HRO catalog and it lists the price of this unit as $409

2. Realistic HTX-100 10 meter SSB/CW mobile. Unit tunes 26-30 MHz and puts out 25 watts (5 on low.) 10 memory channels, RIT, RF Gain, Noise Blanker, etc. Has one small problem, the volume control doesn't seem to function which means no matter where you turn the VOLUME knob, it stays the same (at a pretty comfortable base station level, but too weak for mobile usage.) I simply hook it up to a cheap pair or RadioShack amplified speakers and works great. This has absolutely no affect on the performance of the rig. I was told this can be easily fixed, but I don't have the tools to do that. I can also get the schematic for this radio (so can easily fix the audio), and I do have the manual. Unit comes complete with microphone (with freq/channel up/down buttons) and power cord. Serial number 95004545. These units go for around $120 used.

3. Grundig YB-400 Shortwave Receiver with SSB. LW, MW, SW (1.700-30 MHz) plus stereo FM (with headphones.) LIKE NEW!! Has BFO for sideband reception, WIDE/NARROW filter for LW, MW, and HF. Unit has 40 memories, sleep timer, two

clocks, variable freq steps, backlight LCD display, PLL frequency readout and S-meter readout. Have the original box, all the manuals, and SW stations book, plus a 20 foot Grundig long wire "wind-up" antenna Will also throw in a RS "cube" power supply for the unit. Serial number 355962. Radio is like new. BestBuy store price: $169

4. RadioShack TRC-496 Full Featured AM Mobile CB. 40 channels AM, 10 WX channels, digital RF Gain and Mic Gain (buttons, not knobs), programmable memory channels, Scan mode, Clear Channel Scan, NB/ANL, Instant Ch 9/19 button, PA function, Mic with channel up/down buttons, very nice Amber LCD Data Bank Readout. Excellent condition with mounting hardware, power cord, manual, and mic holder. This unit has almost everything you would want in a AM CB rig. Serial Number 65004694. RadioShack catalog price: $119

Well, there you go. All these radios plus cash (how much cash you want?) for a used ICOM 706. Doesn't need to have any accessories, a "bare-bones" unit is fine as long as it is in decent condition and works good. With the new ICOM 706 MK2 Version G coming out, the original 706 is dropping in price... so I figure now is a good time to try to get the older version. If you have any questions, or an offer, please email me at the below address. Thanks alot!

> the strong chirp cw signal. Franz, DD3FMA

It's not normal. TenTec rigs are noted for being great sounding CW rigs.
I would check the power supply first. Watch the voltage with key up and
key down. If there is a large change there may be a regulation problem,
or you may need a bigger supply.

>by the CTCSS tone you have to use to bring it up.

Actually slotting multiple repeaters on the same frequency would be an excellent idea if locking out would work, i.e. once one repeater was up, the others wouldn't key up. I remember trying an experiment once in a large metro area, when I set up a scanner with only frequencies of repeaters I didn't think were in use, and a COR tape recorder. I had less than 5 minutes of usage in 48 hours of monitoring, and even assuming that when one of the vanity boxes was being keyed up, another was in use that I missed, there wasn't enough usage throughout a 48 hour weekday period to justify the coordination. BTW, over half the usage was the CW ID after a kerchunking in the 5 minutes. Where I now live, there are repeaters with no users, or two users, who call each other for six minutes a day, and that's it. Either a shared repeater with different callsigns keyed by the DCS signal or CTCSS signal, or multiple repeaters would free up a lot of otherwise available space for other usages.

>Repeater controllers featuring voice ID have been available for
>at least 15 years now (one of the Atlanta machines has had voice
>ID for 25 years, using a tape loop before digital voice storage
>systems became available). For those repeaters still using MCW,
>I've yet to find one that IDs slower than 20 WPM. To most Techs,
>and many Generals and Advanced, it is just a noise to be ignored
>that comes on every 10 minutes to satisfy the FCC. Thus it is
>made as brief as the law allows.

What is sad, is that hams have had the ability to experiment with things like repeaters for years, and see what other usages they can find for the spectrum being used. I for example find the repeaters that take APRS signals when someone keys up a good use of spectrum, but it's also a rare new usage. I don't mind CW IDs that much even if sent faster than the 20 wpm allowed by regulation, they can be recorded and slowed down, as I was reminded recently when I heard a tech class licensee discuss how he found out the callsign of the repeaters he heard despite having marginal CW skills. In fact, since most CW sent over a repeater is machine generated CW, it's properly spaced and formed, and probably can be decoded by most decent CW decoding setups. Despite the great love of CW apparent, I don't hear for example code lovers setting up repeaters

to send let's say code practice for 5 minutes upon the proper TouchTone(TM) signals activating the function, and I note that most repeaters have more than enough empty time to allow such a function. Voice mail functions in most repeaters don't allow people passing through to bring up info about club meetings in the region, or exam sessions, or get-togethers, monthly or weekly breakfasts, or hamfests, or foxhunts or a variety of info that can be dispensed over the air without breaking any rules. The controllers available ten years ago easily could have accomodated such things, but instead we have lots of vanity boxes with little usage, and a few repeaters that always have folks listening because they're active.

One final note, the technician class ham who records CW and then decodes it by ear fully complies with the International rules, he's receiving it by ear,
and I suspect he'ld figure out a way to decode an SOS too, and relay the info even if it did take him 5 minutes to decode it.

Gareth....I use Nicopress crips on my open wire feed. They're
easy to find at your friendly Electrical Supply house and not too
hard to apply with a crimper.....assuming you might know an
electrician or lineman who had a set you could borrow. A look
at the line with my tdr shows a very small discontinuity at the splice
and not enough to worry about in the grand scheme of RF. These
splices are very strong and wont pull away in cold weather if you
use the right dies to install them with. As a Phone lineman, I put
on bushels of these little dandys here in Montana, where the wire
was breaking daily due to the wind.

Best Luck.....

Geez, Thrower, your reading comprehension and retention skills aren't very good, are they? This subject was covered extensively over the past few days, right here on this newsgroup. Your buddy in Phoenix already published the big "mystery number" for you, complete with the "other numbers." (407) 282-3586 Old news, Captain Bathtub. It was also discussed extensively and determined that this number is no longer valid because it is an Orlando, Florida phone number and Drew had moved to Hays, Kansas sometime ago. As someone who repeatedly cuts and pastes information from Drew's bio at the radio station in Kansas where he is employed, I would think you'd at least be bright enough to realize that a telephone number with a 407 area code (Florida) would probably NOT be his number. Yep. You're a bright bulb, Thrower. Now we can understand why you play with toy submarines in the bathtub.

From: ke4id@my-dejanews.com
Message-ID: <72ng06tko1@nnrp1.dejanews.com>
Source record: 157915

Dan, if you still need an adapter cable for your IC-Q7A, try RT Systems at 1-800-723-6922. I think the cable is $25 for the 3 pin miniature plug to the 9 pin serial plug. The 4 pin to 3 pin adapter cable is sold separately, but I think you already have that.

I did encounter IRQ conflicts with my computer when utilizing the software. This is not a software problem, rather a computer problem! I temporarily removed my modem to get around the conflict.

I found the software itself quite useful and actually rather amazing. I now utilize the <30Mhz frequencies in memory. My IC-Q7A was a bit quirky about saving some of the extended frequencies. For some memory channels I had to manually reprogram the mode on the radio for memory channels that I had programmed as AM in the software. It was receiving in the FM mode after uploading. This only happened at some of the memory locations, but it is just something to watch for. I later downloaded the file to the PC, then uploaded it back to the radio. It maintained the AM mode in the radio memory after the last upload.

Depending on your location and the proximity of local stations, you may or may not be satisfied with the reception using the mod. For example, If you live in an urban area, you may have more stations than you know what to do with! If you like to listen to the AM broadcast band, but live in the country, you may have to an extended antenna or an external antenna. At this minute I am listening to an AM station, utilizing a telescoping whip, extended further by two feet of wire.

Best wishes!
Jack

Ohio/Penn DX Bulletin No. 383

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 383
BID: $OPDX.383
November 16, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & GO LIST, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4GN, WB4UBD, K5GN, KE9NA, DJ5AV & DX News Letter, DL3DXX, EA5XX, F6HIZ, FR5DX, G3XTT, G4BUE & DX News Sheet, GW0ANA, HA5PP, HB9CYN, IK2NCJ, JI3ERV, LU7EC, AH0W/OH2LVG, ON6TT, YZ1EW and ZS6RVG for the following DX information.

IMPORTANT NOTICE AND REMINDER! Remember when QSLing, the U.S. Postal Service will increase their rate effective January 1, 1999, from 32 to 33 cents. Some operations who are active now may not send their cards out until the first of the new year. Please do not short change U.S. QSL Managers by putting a 32 cent stamp on the return envelope.

4S7, SRI LANKA. Kamal, 4S7AB, a 25 year old electronics engineering undergraduate living in Colombo, is completeing his final year and during his leisure he likes to chase DX. He states that he is active on the HF bands and satellites. He has been found recently on 14190 kHz at 0215z and 14260 kHz around 1500z.

7Q, MALAWI. Les, 7Q7LA, has returned here and is active mainly on CW. His activity includes operations on the WARC bands. Check 24891 kHz around 1415z. QSL via G0IAS (direct only).

8Q, MALDIVES. Lee, G0ULN, reports that he will be here as 8Q7LE from December 22nd to Jaunary 13th. His activity will be only SSB, and he suggests to look for him on the usual IOTA frequencies. QSL via the bureau or direct to his CBA.

9M2, WEST MALAYSIA. "The 59(9) DXReport" states Dick, N4ISV, will QRT as 9M2RY in December and return to the USA. QSL via N4JR.

A3, TONGA (Help needed!). Paul, A35RK, is looking for some help. He needs someone to hand-carry a new rig and antenna parts to Tonga, and also carry broken radios back to the States for repair. If anyone is contemplating a trip to Tonga soon, and is willing to help, please contact Paul's QSL

Manager (Bob Preston, W7TSQ) at: w7tsq@aol.com
In exchange for this assistance, Paul will provide free room and board at his family's guesthouse for one week and the use of his radio station on Lifuka Island (IOTA OC-169).

A5, BHUTAN. Last week we forgot to mention in Jim Smith's (VK9NS) announcement that HIDXA has returned all the A5 donations due to his postponed trip, that was mainly due to the bad weather and storm damage on Norfolk Island.

AH2, GUAM. The members of Guam Contest Club will once again be active from here during the upcoming CQWW CW Contest. The club built an Oceanic record in the Multi-Single category in last year's CQ World Wide DX Contest (CW) and plans to participate in the same category to increase their score. Operators Toshi/JR7OMD/WI3O, Hiro/JH0USD and Sassy/JR0BQD will use the callsign AH2R during the contest. Guam Island (KH2) is on Zone 27 and has an IOTA of OC-026. They report that the Sunrise/Sunset is: 2026/0751z. QSL via JI3ERV (Do NOT send to KH2 Bureau).

BQ9P, PRATAS. Active now on all bands until November 19th. QSL via KU9C.

CORRECTION TO OPDX.380. Herik, FR5DX, states under the TO150 DXPEDITION: "Le Piton des Neiges" is not an island off of REUNION, but the highest summit of the REUNION island culminating at 3069 meters over the Indian Ocean.

E30HA WRAP UP! Zoli, HA5PP, informed OPDX this past weekend that he has just returned from E3 land and states that he would like to go back as soon as possible (with a better rig). Zoli reports he made a total of 13,000 QSOs (3000 USA QSOs) and 8300 on 10 meters. He is interested and looking for some to help in printing his E30HA's QSLs.

EA6, BALEARIC ISLAND. The following operators will be active as EA6IB from Ibiza Island during CQWW CW Contest: EA3AIR/Julio, EA3AJW/Jaume, EA3ALV/Xavier, EA3DU/Sergio, EA3GJO/Jesus, EA3KU/Fernando, EA5BM/Joan and EA6ACC/Josep. The group will also be supported by the EA6IB team (Seccion Local de URE Ibiza). The QSL route for this contest is: Fernando Martinez, P.BOX 69, L'Ametlla de Mar 43860, Tarragona, Spain.

EP, IRAN. The "DX News Sheet" reports that Mohammed, EP3PTT, is often active between 1100 and 1400z, SSB, on 21265 kHz. OPDX has found that he has also been heard on 14195 kHz at 1315z. QSL direct.

FT5W, CROZET ISLAND. "The Daily DX" reports that Gilles, F5AGL, will be a member of the 1998/1999 mission here starting around December, 1998, or January, 1999. Reports indicate that he should be active on the air as FT6WH. QSL via F6KDF.

GU6, GUERNSEY. Don, G3XTT, (life member of the Cambridge University Wireless Society, G6UW) reports that he plans to be a Single-Op/All-band entry in CQWW CW Contest from the Guernsey Amateur Radio Society station signing GU6UW. He does not anticipate any activity outside the contest other than a minimal amount of testing. QSL to his home call, direct or

via RSGB bureau: Don Field, G3XTT, 105 Shiplake Bottom, Peppard Common, Henley on Thames, RG9 5HJ, England.

HS, THAILAND. The "DX News Sheet" reports that the Thai PTD are again allowing stations to be active on 160 and 80 meters in the CQWW CW Contest. Due to antenna limitations, only HS7AS, HS0AC and E22AAA are expected to be active on those bands. QSL HS7AS and HS0AC direct and E22AAA via HS1CHB.

JT1, MONGOLIA. Details from a press release by Tim, N4GN, reports that the "South China Sea DX Team" (SCSDXT) has departed from the shorelines of the South China Sea and is crossing the snow and ice to reach Ulanbaatar, Mongolia, and make CQ Zone 23 available in the CQWW CW Contest. An agreement has been signed with MRSF, the Mongolian IARU Society, to team up with their folks in downtown Ulanbaatar to put JT1A into the Multi-Single category. The travelling operators are OH1RX, OH2BE, OH2BH and OH8PF, and they are bringing Yaesu FT1000MP and Alpha firepower with them. This visiting team will arrive on November 26th and close down on Tuesday morning, December 1st, to take their flight back to Beijing, China. QSL this JT1A operation via Jouko Hayrynen, OH1RX, callbook address.

KH7, HAWAII. The "DX News Letter" reports that Chad, WE9V, will operate as KH7R in the CQWW DX CW Contest. He will be on the air as KH6/WE9V from Ken's (KH7R) QTH especially on the lowbands between November 18th and December 3rd. QSL via WE9V.

QSL INFO AND NEWS.....
The log server is now working for the E30GA operation. Try the WEB page: http://no4j.com/nfdxa/logs/e30ga.htm

4N9BQ was Laci, YU7BW, on St. Nikola Island (Yugoslavia, IOTA EU-163). QSL via YU7BW.

Mike, KH0AS, has a new QSL Manager. Jim, WB4UBD, will handle the task. For those who have not received your cards yet, Jim states, "Please be patient and do not resend at this time. I have logs in hand and expect to have the backlog in the mail by mid-November. Just a reminder - if you have submitted cards to Mike 'via bureau', he probably never received them. There is no Incoming Bureau for KH0 and ARRL policy (per their web site) is that they 'no longer hold cards for countries with no Incoming Bureau'." Jim also mentions that Mike has capability for all modes and hopes to be particularly active on RTTY as family life and work permit. QSL to WB4UBD at CBA.

QSLs for LU7EC should be sent to: "Luc" Sarmiento, S/N C.P. 2703, Carabelas, Argentina (or via the bureau).

The Logs for S92YN and S92YV (October 26th through November 7th, 1998) are now available at: http://ab5eh-lin.tamucc.edu/~hb9cyn/Searchlog.html

TJ2RSF QSL route. The QSL route for the TJ2RSF DXpedition is via EA4URE (official callsign from URE H.Q.). The URE is the Spanish

Radiomateurs Association and has two addresses:
URE, Avda. Monte Igueldo 102, Madrid 28017, Spain
-and-
URE, P.O. Box 220, Madrid 28080, Spain
You can also send your card via the bureau.

The two day operation from China Guangzhou (Zone 24) by Hannes/DL3NEO on October 31st and November 1st, using the callsigns DL3NEO/BY7KH and DL3NEO/BY7KF, should only be QSLed via DL3NEO. The Bureau is preferred or send direct to: Hannes Schmidt, Komotauer Str. 28 B, D-91207 Lauf, Germany.

Germano/TG9IGI has a new QSL Manager. Cards can be sent to I2MQP direct or via the Italian bureau. It has also been reported that Germano is preparing his station for RTTY activity.

SPECIAL EVENT. Glyn, GW0ANA, along with fellow members of the Barry Amateur Radio Society will be recreating the first ever "Marine Distress Signal" ever sent by radio on December 19th. The group will be on board the East Goodwin Lightship in the middle of the English Channel 12 miles off the Kent coast from Dover. They will re-create the first ever "Distress Call" sent out 100 years ago by the Lightship East Goodwin in 1898 after she was rammed in fog by the SS Mathews. Using a Marconi Spark gap transmitter that Marconi had only just sold to Trinity House, the first ever ship's radio operator sent out "CQD" because of this radio distress signal. The ship's company was saved from drowning on the Goodwin Sands. The callsign they will use at this historic recreation is GB100EGL, where the suffix stands for the East Goodwin Lightship. This callsign will only be active on December 19th. However, the Society will also be active at the South Foreland Lighthouse for a longer time. This is the other end of the link from East Goodwin Lightship. The callsign from the South Foreland Lighthouse is GB100SFL and it will be active from December 18th to the 27th. QSLs for GB100SFL and GB100EGL go to GW0ANA. These cards will be very special because they will represent the first time human life was saved by radio, and proved beyond a shadow of doubt that commercial radio was possible.

SPECIAL EVENT. In celebration of the 75th anniversary of the first transatlantic radio connection by W1MO and F8AB, the French Telecommunication Authority has agreed to let certain French operators use the callsign F8AB for the night of November 25th to November 26th. The historical event took place on the night of November 26, 1923, around 0200z, between F.H. Schnell, W1MO, Hartford, Conn. USA and L. Deloy, F8AB, in Nice, France. In order to celebrate this anniversary, F8AB will be active from the Nice area starting 2000z on November 25th and will be operating until 0800z on the November 26th, on the following frequencies:
SSB - 18140, 14240, 7070 and 3770 kHz
CW - 1835, 3525, 7015 and 14035 kHz
Special attention will be paid to North America, but ALL callsigns will be answered! The F8AB callsign will also be used by the Bordeaux DX group for the CQWW CW Contest. A special QSL will be printed by the

Clipperton DX Club. QSL Manager is F2VX. QSL via Bureau or direct.

VP5, TURKS CAICOS ISLANDS. Dave, K5GN, and XYL will visit VP5JM on Provo arriving November 24th and departing December 1st. They will be active on all bands as VP5/K5GN. Dave states that he may be able to do some activity on the WARC bands as well on request. He will operate on all bands in the CQWW CW Contest as VP5GN. QSL to K5GN.

WELL KNOWN DXER HEADS TO HONDURAS. Peter, ON6TT/5X1T was informed Friday, November 13th by his HQ that he will be leaving for Rome, Sunday morning to prepare a UN telecoms team leaving later next week for Honduras. Peter states that he will be in Honduras and neigbouring countries for a month, setting up the telecom team and getting things organized. He is currectly looking for telnrs/addresses of active hams in Honduras, Guatemala and Nicaragua (preferably in the capitals). If you can help, reply to: peter.casier@wfp.org
Peter reports, "Apparently the hurricane did quite some damage, so food is needed badly. Our UN organization is the one bringing in the food, transporting and distributing it. But without decent telecoms, it will be difficult. And there is not much telecom left."

XX9, MACAU (ZONE 24). Another SCSDXT member will be providing another multiplier in the upcoming CQWW CW Contest. Look for Pertti, OH2PM, to activate the famous XX9X station on all bands as a single operator during the contest. Look for warm-up activity from XX9 starting the weekend of November 21-22nd, as OH2BH helps Pertti line up the beams, tweak the amplifiers and prepare for the CQWW race. QSL this XX9X operation via Pertti Simovaara, OH2PM, callbook address.

XU, CAMBODIA. A multi-national team of DXpeditioners will conduct a special events DXpedition from the ancient temple city of Angkor Wat in the Siem Reap province of Cambodia, November 26th through December 4th. The DXpedition will operate CW, SSB and RTTY on all bands from 160 through 6 meters. A special callsign, XU1A, has been issued to the team. The team, which represents Japan, the USA, Finland, Sweden and Hong Kong, is headed up by Yasuo "Zorro" Miyazawa JH1AJT and includes Kimo Chun KH7U, Kazuhiko Fujita VR2KF, Hitoshi "Jin" Fujiwara JF1IST, Jan Hallenberg SM0DJZ, Masayuki Nakatani VR2MM, Erik Sjolund SM0AGD and Frank Smith AH0W/OH2LVG. They will be operating from within the shadows of Angkor Wat's majestic Bhuddist and Vishnu temples; some built well over 1000 years ago. The DXpedition will take place in conjunction with the Angkor Wat International Half Marathon. It involves several Olympic medalists, and is all in an effort to raise donations to assist Cambodia's victims of landmine accidents. The marathon and the DXpedition itself will be featured on Japanese television. In the noble spirit of promoting international friendship and goodwill through amateur radio, hams worldwide are invited to participate in this international humanitarian effort with their donations, large and small. Any such contributions received in support of this effort will be forwarded immediately to Cambodia for this purpose. Contributions maybe forwarded via JH1AJT. In the meanwhile, if DXers would wish to forward suggestions in regards to propagation (openings,

times, bands) prior to the operation, please do so via the Midway-Kure DX Foundation: mkdxf@aztec.asu.edu -- QSL the XU1A DXpedition via JH1AJT.

XZ, MYANMAR. The Central Arizona DX Association and members of the XZ1N team continue to be busy assembling nearly a ton of equipment to return to "The Golden Land". They will operate from Yangon, Myanmar. Their activity from the Asian Zone 26 will take place between November 21st through December 6th, on 160-10 meters and all modes. QSL via W1XT. The XZ1N WEB site can be found at: http://ng7m.qrq.com/~xz1n

Z21, ZIMBABWE. Dick/ZS6CAL and Dave/ZS6RVG intend to operate as Z21/ZS6PDX from December 17th to December 20th. They will operate mainly SSTV and RTTY on the 10, 15 and 20 meters bands. QSL via ZS6RVG. Dave requests that if there are any direct QSLs, to PLEASE send them only in the new year to avoid the Christmas postal QRM. All cards not answered direct by the first of March, 1999, will be sent to the ZS bureau.

ZP5, PARAGUAY. Jon, KE9NA, states that he has finalized his trip here and will be operational as ZP5/KE9NA from November 18th through November 22nd. Acitivity will mainly be SSB on 15 meters and 10 meters during the evening hours. QSL to home call direct or via Bureau.

OK, I'll take the challenge. Tonight while I'm killing time on the MARS net,
I'll visit several repeaters and say, "Hello all stations." I still won't
get a response.

The polite way of letting other hams know you would like to be engaged in conversation on an idle repeater is to identify (give your call on the repeater) no need to say anything further, if someone wants to talk they will anwer you, at least that is the way it works in New England, are there regional differences in other parts of the country?

Every time someone speaks to you, you're playing the role of a human
modem. For every word you read, you're playing the role of a human
modem.

Until we either perfect mental telepathy or hard-wire our brains together
we will each continue to play the role of a human modem.

A properly-done Nicropress splice will hold 70% of the wire's
strength. There is only one fitting (in the maritime industry)
that holds more than 100% of the wire's strength (i.e., the wire
will break before the fitting) and that's the lowly wire clamp.
(It's also the cheapest fitting!)

Hmm, we'd need a "null-human-modem" cable to pull off the hard-wire...Let's see cross xmit and rcv - "mouth and ear" from old telco days makes sense! RTS and CTS - hell, nobody listens anyway so tie them both hi and worry about flow control later!

Spent some time this afternoon listening to these frequencies. Seems to be a "daylight version" of the chaos that takes place nightly on 75m. Some of the same players, too. Porkbutt on 14.300, talking endlessly about his ongoing litigation. Couldn't hear all of it, though, as he was interrupted regularly by jammers of all types, sizes, and colors. Over on 14.313, an ongoing argument regarding the merits of Herbie. Pro-Herbie vs anti-Herbie forces. Lots of jamming here, too, incuding one very powerful station who overrode all others at my location by playing tapes of herbie speaking on previous occasions. Fun stuff. Welcome to amateur radio in the late 90s.

>(name == Jeff) ? 73 : 73s

I'm not on your case at all, Marv. You're just plain wrong in your belief that "CQ" means "I'm here and I'm willing to chat." Communicating demands precision of thought and meaning - ambiguity has no place in radio work. Our prosigns have definite meanings; use them otherwise and you'll be labeled a lid or a novice.

Also, amateur radio is getting close to its one-hundredth birthday and as such, has acquired long-standing traditions. If you choose to willfully break them, then you should expect that some will attempt to correct you.

Now, would you pluralize a plural in other written work? Could I write "traditionss" in the above sentence and have expectationss of credibility in the mindss of our friendss on this NG?

(Note that both "CQ" and "73" are CW prosigns. For some odd reason, use of these and other CW signals have become common-place on amateur phone. But that's an entirely different thread.)

73, Jeff KH6OO

Jeff,

I'm gonna go out on a limb and take a guess that you have a PhD (read that Piled Higher and Deeper) and teach at a university. At least you sound that way. Perhaps you would care to tell us exactly what CQ means, giving some references, and what CQ is used for, and possibly show, using suitable logic, how its usage conflicts with the notion of "I'm here and I'm willing to chat."

I know that when I turn on the rig and send "CQ de KC0EGB" I am stating my willingness to conduct a QSO with anyone that answers my call. In my case, since I don't handle traffic, have yet to encounter an emergency, and seldom need to test, the reason is to chat or make a DX contact. Just like we're doing right here. :-)

How 'bout those digital table clocks sold everywhere, (except I haven't seen it in Radio Shack), that have the WWV receiver built in and autocorrects the clock. You cannot hear WWV, but it MUST be able to get that data stream sent at what, 100 baud? Mebbe an amp could be added and the audio extracted.
I have even seen them in Service Merch, and Brookstone.

2973. Need Help Finding QST article

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-15 00:00:00 UTC
From: Steve Ellington <n4lq@iglou.com>
Message-ID: <364fa3b7.0@news.iglou.com>
Source record: 157937

Can someone help me find a QST article I remember reading? I believe the title was simply "JIM".
It was a story about a college freshman's first visit to the school's radio room and his introduction to the big time operators at the school.

The article originally appeared in the 30's and was recentenly reprinted within the past 10 years or so. The annual index in QST is of little help. Any help would be appreciated.

Hi:
Is there anyone out there that has some sort of
programming software for this radio.

I know that the radio is EPROM controlled and you
need the dedicated programmer from the manufacturers
but, if you remove the EPROM only instead of the
whole board I imagine that it can be programmed
with some software especially written.

Any comments or suggestions are apreciated

Source record: 157954

Hello,
Is it possible to use a PC to key a radio (PTT) and play a short .WAV file as a status message?
The radio sets are Motorola handhelds with a jack for a MIC/SPEAKER.
I'd like to use the LINE OUT feature of the PC's sound card. Is there such a thing as a LINE INPUT VOX (1 VPP)?
Thank you in advance for any information.

I sure hope the ARRL is getting all this. Amateur Radio is being dismantled piece by piece. It aint going to be much longer and it will be reduced to the status of CB radio, totally out of control. The incentive will be based on the handle you choose. QST will be devoted intirely to ? Or maybe it will be just 73 and Wayne left.

Largely because of the ARRL and their continued insistence on the antiquated hazing ritual of Morse code as a licensing requirement, ham radio is now dying a slow and painful death.

"Could care less" means one is still capable of caring - there is still
an amount of caring that could be accomplished, while "couldn't care
less" means one has reached his lowest boundary - no more caring is
possible.

Peruse the UK radio groups - even those UK participants which are
uneducated have a better written command of English than most of
us. I wish we took more pride in our writings on this NG.

>Jeff KH6OO

OF COURSE Drew hasn't keyed his HT since moving from Florida to Kansas.
If you recall, a couple of weeks ago Mr. Durigan was bragging about how his new Dell computer was purchased in part with funds from the sale of unwanted amateur radio equipment. Moreover, since Drew is endlessly droning about how ham radio is a dying hobby in the amateur radio newsgroups (with no facts to back up his statements, of course), we know that he isn't wasting his valuable time (ha, ha, ha) talking on the local 2 meter repeater; he'd rather spend hours online posting useless spam instead.
Mr. Durigan's endless criticism of amateur radio makes me wonder why he went to the trouble to study for and obtain a ham license in the first place. Hey Drew, before you put forth the effort necessary to get your ham ticket, did you try listening to the local repeaters on a scanner to decide whether or not the hobby was of interest to you? Obviously, SOMETHING about amateur radio must have motivated you to get your license. Whatsa matter, Drew, couldn't find anyone who would talk to you once you got your license? Perhaps that accounts for your bitterness towards amateur radio. Stick with 11 meters, Drew; I'm sure you'll find plenty of mindless morons like yourself on 27 MHz to chat with who know nothing about the radio hobby and don't really care, either.
By the way, it can't be that hard to find "CB Rambo", folks. After all, how many DJ's named Drew Durigan can there be in a burg the size of Hays, Kansas?

I remember those. I don't know of a dedicated radio like that manufactured today but you can of course by a shortwave receiver for as little as $80 or so. Used radios at yardsales and certain chinese models can be had for around $20. Also, this company makes clocks (and wristwatches!) that callibrate themselves automatically to the WWV radio signals: http://www.synctime.com/

You may also try this link, if you just need to know the time: http://tycho.usno.navy.mil/what.html

You *may* be able to find a kit for a dedicated WWV radio...no better way to search than the Internet.

I agree totally and have sent my comments, hope you other Tech pluses have done the same. Renew and step BACK? I don't think so! We have EARNED our small HF privileges by PASSSING a 5 wpm code test, I will not have it taken away from me.

>|While I can agree with points made from both sides of the debate, I am
>|leaning towards the no-code side. I enjoy operating CW, but I don't

Agree again. They could at least lower the speed tests, 5-10 wpm for general for instance.

>The 5 wpm Element 1(B) should be more than adequate for International
>obligations and I think 13 and 20 are not needed for the ITU.

Agree again. There is a code treaty but NO SPEED set in stone. So 1 wpm could satisfy the treaty technically. Obviously that speed would be rediculous though. 5-7 wpm is plenty fast enough I feel.

Amateur Radio is the last service left today using Morse Code,and must continue doing so.
A lot of people refuse to except that fact that its still an important mode of communications.I just hope we never see the day when skilled telegraphers will have to be pressed into service if no code becomes a reality.

Amateur Radio must always be able provide a resivoir of highly skilled people who are able to provide a service in the time of need.

A no code licence is exceptable for those who desire experiment on the VHF and UHF frequencies. An experimenters class, or Technician.

As for the other classes of licenses, There need not be any other than the Extra Class which will continue to provide the ultimate in expertise in commincations along with state of the art technology.

Twenty words per minute is a reasonable requirement.

During last night's "Great Liberty Net" W1WCR made mention that Walter Miller was fined $4500 for playing music.

My Question is When is the FCC gonna get off there butts and collect on WB2OTK's $10,500 that he owes.

Thank about it.....

PS If Mr. Whiten feels he should not pay his fine, he should lets know why that is so.

I would suggest being very careful when labeling someone as a "thief" in a public forum such as this. Unless you have complete documentation and verification to back up your accusations, you could very well find yourself on the losing end of legal action for libel and/or defamation of character.

Sounds like a plan, Jeffy. While you're at it, I'm sure you will provide the necessary proof that he has indeed transmitted since his move. Ditto for the proof that he does not have a current mailing address on file with the FCC. If you read the rules, Jeffy, you will see that the FCC says nothing about station location. Only that the licensee must have a current *mailing* address on record where he/she can accept official correspondence from the FCC.

>Amateur Radio is the last service left today using Morse Code,and must continue
>doing so.

While first noting that NOBODY in the no-code-TEST movement is
supporting or suggesting any sort of ban on the use of Morse by
anyone on any of the ham bands where it is now permitted, I must ask
the following question, for which NOBODY has EVER been able to
provide a rational answer ...

Q: Why "must" we continue to use Morse (forever, presumably)
when everyone else has abandoned it???

What grave harm would the human race suffer if hams eventually
abandoned Morse because they also found it to be outdated and/or
no longer found it "fun"???

(Note that even I, who have no interest in or use for Morse code,
firmly believe that there will always be some percentage of hams
who will choose to learn and use Morse, just as people still enjoy
horseback riding, dressing up in medieval garb for "renaissance
fairs," and any number of other things that are no longer
"mainstream" or "modern.")

Do you bemoan the fact that we no longer use stone axes to
cut firewood, since chainsaws have been invented???

>A lot of people refuse to except that fact that its still an important mode of
>communications.

What's so "important" about it? It's purely a matter of personal
preference for recreational purposes ...

>I just hope we never see the day when skilled telegraphers will
>have to be pressed into service if no code becomes a reality.

Please present a scenario with a single ounce or reality where "... we ...
see the day when skilled telegraphers will have to be pressed into service."
(No "Independence Day, CW saves the world from alien invasion bunk, please.)

>Amateur Radio must always be able provide a resivoir of highly skilled people
>who are able to provide a service in the time of need.

But NOBODY in the emergency management community WANTS or NEEDS
telegraphers. Why do we "need" this "resivoir (sic) of highly skilled (in

Morse)
people?

Aw, you should at least give it a shot. You might find you like it. For me, working an obscure South Sea island on 15 meter CW is more interesting than a simulated cross-town cell phone conversation using a HT and a repeater.

Hello,

I am a very frequent short-wave listener. I am using a TS930 from Kenwood
with a 3 element beam on about 16m .
Now I am searching for a recent list of frequency used by the American
airforce and seaforce.
Also a place where I can find them.

Many thanks in advance.

Filip

Something is definitely wrong when saying "monitoring" is OK and saying "CQ" is impolite, when in fact they mean fundamentally the same thing, i.e., "I'm here and I'm willing to chat".

The way to minimize the "impedance bump" is to make the diameter of the joint as close to the diameter of a single wire as possible. Unless the wire is spaced very close to a ground plane or another conductor, the change in impedance due to a typical splice will be very small. It can be neglected in most applications.

I'll let others comment on the way to get the most strength.

Lafayette Indiana does now. It copied some ordinance from
Wisconsin where they just took the FCC regulations and made
them a city ordinance. Now the local cops, with help from who
ever does the police radio repair (GROL), can arrest these
CBers for interfering with the good citizens. And for having
too much power, illegally modified radios and over modulating.

I suspect that you need more than 12 amps for your 605T, and when the power supply can't handle the load, your rig is folding back. Easy way to test is try a 20 or greater amp power supply or try using the rig from a vehicle. Also, you might want to try hooking up a dummy load rated for at least 50 watts and keying up to be sure that the finals aren't finding a funny load, but the power supply seems the likely culprit.

ARLB098 COMMUNICATIONS EMERGENCY TERMINATED

ZCZC AG98
QST de W1AW
ARRL Bulletin 98 ARLB098
From ARRL Headquarters
Newington CT November 16, 1998
To all radio amateurs

SB QST ARL ARLB098
ARLB098 COMMUNICATIONS EMERGENCY TERMINATED

The declared mandatory communications emergency affecting 14.265 MHz ends November 17 at 0001 UTC. The FCC said hams may resume using the frequency for normal amateur purposes after that time.

The communications emergency was declared to support flood relief efforts in Central America.

The FCC announcement also expressed the Commission's thanks to all in the Amateur Radio community "for their cooperation and dedicated amateur service."

The termination announcement came November 16 from Deputy Chief Joseph Casey of the Compliance and Information Bureau.

> the radio for a while now and just figured i would give the mod a try.Please
> e-mail me

It sounds like one of two problems. The first, and most common, is that
you've picked up a newer one that can't be modified and you don't know this.
But if you're getting teh cerr message, it sounds like you're doing it wrong.
I need to clean up my faq a tad, but here's some of the fixes here for you:

1.) Change only the /second/ of the two bytes first. Think of them like
this, the
second one is what you want it to go to, and the first one is what it currently
is.
After the mod is sucerssful, change both bytes on all files so that they'll
work.

2.) Turn off your template and work from just a .rdf file. Having the
template on
cauyses all sorts of interesting problems. This is one of the most common
problems
(short of everyone buying a new one thinking that it could be modified :)).
After
successful modification, you can turn it back on, after creating a new one or
changing both bytes in the old one.

Remember to check your success by downloading a fresh .rdf file and viewing
teh results, plus, /make backups/ in case you flip up. Don't x-mit out of band,

and happy modding.

I travel I-10 between Phoenix and Southern California on a regular basis (every week) I have frequencies for Central Arizona but not for la paz county.

On I-10 in Arizona, I search 460.0-461.0. Once i cross into California I search 42.0-43.0. The Riverside Sheriff and some other Riverside cities use 866-869mhz trunked frequencies as do San Bernardino county and some San Bernardino county Cities. In Palm Springs, and also Orange County they use the same frequencies that are used in Maricopa County (460-460.5 mhz)

In Los Angeles county, there are 483, 488, 506, 507, 508, as wel as 470 mhz frequencies in addition to the 154mhz, 453mhz, and 460mhz frequencies.

will trade my list for yours!!

JOHN

Philips FM900 series radio users !!!

An email reflector for sharing info on these radios has been created.

To subscribe you can go to :-

http://www.onelist.com/subscribe.cgi/fm900

Once registered to contribute send email to :-

fm900@onelist.com

Those not familiar with email reflectors can get info at :-

http://members.xoom.com/a_gilly/reflector/info.html

Those with FM900 / Radio Related Web sites please feel free to
make mention of this reflector on your page.

The more subscribers the better !!!

Alan

They jumped the gun on the Feingold Amendment which never
became law -- it passed the Senate and was stalled in the
House (my original info that it cleared the House was wrong).
It was attached to the McCain Anti-Slamming Bill but it didn't
make it out in time. Whew!! Close call....

The situation as I know it from a source in that area was that
a CBer was getting into a neighbor's telephone (power level
unknown), and the CB operator offered to buy her a bullet-proof
phone. This was rejected and the wheels started turning. I
have yet to see the actual ordinance but it allegedly covered
only overpower and out-of-band CB, the same stuff that the
Feingold Amendment would have covered.

As it stands, Lafayette (or anywhere else) has no authority to
enforce CB rules. There is a specific U S Court of Appeals
ruling that is very clear that the FCC has exclusive
jurisdiction over cases of interference to home electronis
equipment.

Let's see if we can keep it that way.

My offer stll stands.

Actually, I would like to see local police jurisdictions have the ability
to enforce a limited set of FCC regulations, mostly specific CB and amateur
regulations. When enforcement is not taken it only creates an atmosphere
of "who cares" among individuals disinclined to obey the FCC regs.

He may be talking about a cross-band repeat function. When I go hiking,
I can't hit the repeater with an HT but I can hit my mobile with an HT.
So I talk to my mobile on 440 and let it repeat into the repeater on
2m. Thus I can run low power on my HT and communicate full quieting
into the 2m repeater. A lot of dual-band mobile rigs and HTs have
the cross-band repeat function built in.

I certainly hope you don't mean me. Having fought with a recalcitrant FCC
over enforcement laxity I think I speak with a certain amount of authority.
Add in my QCWA membership, DXCC and local club presidency, field day
chairmanship and technical committee member I figure I got as much right as
the next feller to say something about the need for local authority to
tackle some of the easier interference problems.

That is precisely the area that local officials should NOT have any
authority. They have not the expertise to measure if an amateur rig is
broadcasting spurious RF or not and if it exceeded that rigs accepted
ratings. Your problem was buying poorly designed consummer electronics.
For all you know the ham was operating within his rights and you violated
the law by interferring with his operation.

The only areas should be for local authority, as an example, to track down
key-down interference traced to a location or perhaps excessive CB power
useage. Usually the non-technical, anyone can figure it out, type of
violations. Don't forget in any criminal proceeding the prosecution must
demonstrate that a violation of law occured. That means a competent
witness to testify to the illegality of the operation. The more
sophisticated RF crimes are generally beyond the ability or desire of most
police agencies.

I agree that the ARRL position is an insult to the community at large. Dumbing down of the hobby is exactly what is going to happen if this goes through.

I was especially upset with the commnets from our "leaders" that the low numbers entering the hobby must mean the requirements are too tough. The way to fix...reduce the requirements.

Why do we not just give a license to anyone that wants one ??

This is another VE who will not participate if the "suggestions" are adopted.

3056. Re: No Code

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-16 00:00:00 UTC
From: Alex <kf4lat@hotmail.com>
Message-ID: <70L32.1712$f%1.3508206@news1.atl.bellsouth.net>
Source record: 157853

What does knowing the code beyond 5 wpm prove anyway???
There is a growing group of operators that use packet, satellite, voice, SSB, and ATV.
I am not totally for a code free system, yet, but I think that anything more than 5 wpm is unnecessary. It is good to at least 'know the code', up to 5wpm just in case of an emergency and you can't use a mic or your mic is broken.
Several major countries are looking at abolishing the code requirement in their country. If they do, then who are we going to send code to????
Maybe I am taking a middle of the road stand here, but I strongly believe that the future of ham radio is to be smarter (satellites, computers, packet, programming, microwave, ATV) not faster (12, 20 wpm!)

>brilliant legal expert, you're probably familiar with where the "burden of
>proof" lies, and that "malicious intent" has to be proven.
>Then there's that little thing called The First Amendment that fits into
>everything, but you already know all about that don't you?

The First Amendment does NOT give an individual the right to speak or print untrue statements about another person. Read my original post again. IF that which is spoken or printed is TRUTH, there is no libel. But you better be prepared to spend lots of time and legal fees in court to defend yourself agaisnt a potential civil action against you. I made no determination as to the truth of that which was posted; I merely suggested that one should be REAL careful when posting information of this nature.

Get it now?

I think HRO should give you a FULL CREDIT for the price of the radio plus your shipping costs to make up for the inconvienence you have suffered. HRO can simply send the radio back to ALINCO USA
since it is a DEFECT. Personally I'm sick and tired of us HAMS being treated so poorly
by these Ham chains that claim the Customer is so important. For example, if you bought a
Expensive TV at Circuit City or any other
Place wouldn't they appologize for the Inconvienence and not charge the "RESTOCKING FEE".

>es,
>and what CQ is used for, and possibly show, using suitable logic, how its usa
>ge
>conflicts with the notion of "I'm here and I'm willing to chat."

Prior to 1976, the ITU voice-equivalent of "CQ" was "All Stations"; during
'76 we were instructed it's meaning changed to "Hello All Stations."

The ITU (International Telecommunications Union) is the world body which
creates communication policy; its individual member nations are left
to interpret and enforce those regulations. (BTW, at any and every ITU
conference, not only are FCC representatives present as part of the
US delegation, but the US State Department reserves a delegation seat for
an ARRL official. That ARRL rep advises the US delegation on amateur (and
non-amateur) matters.)

I can provide for you the exact ITU reference on Tuesday - that will be
the next time I'll be using the government documents area of the library.

Off the ham bands, "CQ" (as a telegraphy prosign) means exactly as
I've stated above. Because all of our prosigns, including the Q-
signals, were borrowed from the non-amateur services, the ham-radio
definition of "CQ" should coincide with that of its ITU definition
(we are an ITU-regulated service).

>I know that when I turn on the rig and send "CQ de KC0EGB" I am stating my
>willingness to conduct a QSO with anyone that answers my call. In my case,

Yup. You're calling all stations, but off the ham bands, your transmission
would be considered incomplete - if you were to add say, "CQ DE KC0EGB
QSO?" then it would make more sense, i.e., you should provide a reason
why you're calling all stations. But us hams have always been a bit
sloppy (that's probably why we were labeled "hams" in the first place!).

Hmmm.... interesting idea! Actually this makes some sense, now
if I could just find a cheap one to experiment with or better
yet it seems that I have seen plans on how to build a cheap
WWV receiver. Does anyone know where I might be able to find
plans for this type of project? One of my first experiences
with radio was when my dad brought home an old shortwave
radio he had salvaged from someones junk pile. I can remember
sitting there listening to the time signals and just being
totally amazed. I think that a project like this might be a
fun one for my son and I to build together.

From: name <76401.1442@CompuServe.COM>
Message-ID: <uhuaDRSE#GA.205@nih2naab.prod2.compuserve.com>
Source record: 157871

I just hooked my new Alinco 605 TQ to my 13.8 V, 12A power supply. In Low power (5 watts), it transmits fine. In High power (50 watts), it looks like it transmits for less than half a second, and then nothing. The ammeter on my PS goes from 0 to 5 amps, then back to zero.

I have a Cushcraft AR2 antenna, and it's hooked to the Alinco with 2 feet of RG-58 cable.

Am I overlooking something obvious here? Can the RG58 handle the power? Could it be that my Astron PS doesn't supple the current fast enough? Since the antenna is only 2 feet from the radio, could this be a problem?

Thanks for any help,
John Guin

When I bought my TS50 at the local HRO, they told me to wait 2 weeks to send in the registration. If anything was wrong they would replace the unit with another new one. When I bought my TS870 a year later I got the same deal. That's what made me come back. Unfortunately for them I haven't bought anything in the last 3 years as both radios continue to work great.

Kenwood TH-79 Amateur Radio. Perfect condition, with original box and manual. Includes everything that came with it new (Battery Pack, Charger, etc.), and AA Battery pack. Asking $275. Purchased less than a year ago for around $450. I no longer have a use for this radio, as I have purchased a mobile unit. Shipped priority same-day I recieve your money-order or when personal check clears. Will consider trade for working Uniden MT-8100 or similar (no longer produced scanner, made primarily for police/fire dept. use).

Thanks,

Ali, KE6YCJ

Still selling, but also looking to trade for MR-8100 from Uniden. There is no such thing as an MT-8100. :)

Thanks,

Ali

I will never touch ham radio markets. It's too dangerous. It's too unstable. I am not surprised if ADI radio decides to scrap the plan about expanding their business into ham radio. It's much safer to make cellular phones nowadays.

Check SWR. HTX-242 does the similar thing... (i.e. transmits for 1
second 45W and then goes down to 10W when SWR is too high)

why even 5 WPM is necessary ? don't tell me it's an international
requirement... many countries already decided to take this junk away
from HF requirements. besides... how many people actually punch
CWs nowadays in their shack alone ??? get a life huh...

>could this be a problem?

RG58 can handle 50 W of power. However putting 50 W into an antenna right next to the radio and power supply could be the source of your problem. Sometimes power supplies don't operate correctly in intense RF fields.

Also, is the antenna designed for mounting on a car? If so, what is it currently mounted on? Mobile antennas depend on the car's metal body as a counterpoise, and transmitting into such an antenna that has no counterpoise may give a high SWR.

Try transmitting at full power into a dummy load if you have one or can borrow one. If that works, the transceiver and power supply are OK. Then try putting the antenna further away from the rig and see if that makes a difference. Check feedline SWR if you can get an SWR meter.

Another possibility is just a bad connection somewhere in the RF path.

The problem is likely someting simple, but it helps to be systematic about eliminating possibilities.

Dave

Well folks, I guess it's fun to talk about, even when one knows not what he is talking about. May I suggest all interested parties call the FCC and find out that Walter did not get fined, also do ask about the OTK $10,500 fine, I think they will tell you something like this "we have no desire to bother with that particular case" Another words, case closed, you lose again, end of story.

There is a site on the net where you can enter a city name and find the longitude and latitude for it...

I've lost the URL now, can anyone help?

Email would be appreciated - I'm right in the middle of a small project and need the information as quickly as possible...

Thanks,

John

Better study your law books, CB. Libel isn't that easy to sue for any more.
Many states have passed what is known as "tort reform" in an effort to
eliminate frivilous lawsuits.

Lafayette Indiana does now. It copied some ordinance from
Wisconsin where they just took the FCC regulations and made
them a city ordinance. Now the local cops, with help from who
ever does the police radio repair (GROL), can arrest these
CBers for interfering with the good citizens. And for having
too much power, illegally modified radios and over modulating.

Why make a fuss? Americans have a long tradition of butchering the English language. And did you know that nearly 60% of the English language evolved from mispronounced French?

Since you're such an expert in law, you'd know that the poster is protected
under the same laws that prevent a business from suing an irate customer who
decides to picket on the sidewalk in front of the business. Being such a
brilliant legal expert, you're probably familiar with where the "burden of
proof" lies, and that "malicious intent" has to be proven.
Then there's that little thing called The First Amendment that fits into
everything, but you already know all about that don't you?

Didn't offer any legal advice, sorry. I just suggested that it might not be a wise idea to make a public accusation unless you have rock-solid evidence to back your claim and are prepared to do so in a court of law.

"Where's that big 'ol CB RAMBO??"

Good question - I don't know precisely how he came to that conclusion.

> Did he do a site survey with calibrated antennas, and
> calculate the ERP levels? Or did he just make an (bad) assumption that
> "he's coming through everything, so he MUST be running power"?

He didn't do a site survey, that I know. His assumption may have been bad. He was, however, much more knowledgeable on the topic than I was.

One of the problems we have here, I think, is that it is difficult for non-CBers or non-hams, like me, to understand that it is apparently OUR
fault when we lack the technical knowledge to be able to pick our consumer electronics with more expertise so that we don't get RFI from a neighbor
like mine <sarcastic grin>. And then to be told - as I was at the time - that I'd have to spend what was, for me, big bucks on filters to be able
to use my electronics without hearing my neighbor added insult to injury.

Frankly, my attitude at the time was, "Keep your *@#! radio waves off my property." If this happened again, I'd just hire an attorney.

> Frankly, my attitude at the time was, "Keep your *@#! radio waves off my property."

The scanner people tried that arguement when they
wanted to listen in on Cellular calls legally.

They said if the radio waves are on their
property, passing through their bodies, they
should be allowed to receive them, and if they
can't then keep them off their property.

That didn't work for them so I doubt if you will
fare any better.

The rulings that hurt the scanner folks will help
your HAM neighbor in this case.

>If this happened again, I'd just hire an attorney.

I'm afraid you would just be wasting your money!

That's strange; I own a bunch of type-accepted
amplifiers made by Sonar, Courier, Kris, Johnson,
etc., that have type-accepted stickers on them and
they were designed for use in the CB band.

They are pretty old, but they are all still in
excellent working condition.

I am not disputing that you own FCC type accepted amplifiers just the fact that they are not intended for the 11 meter band they were intended for the 10 meter use which with very little tuning (if any)can be used on 11 meters in fact back in the early 80's everybody went to a Amateur Radio shop to get there amps for the CB Band. Even back then they were still illegal for CB use.

Unless I didn't see the very first post I saw nothing that said that the Ham
was running any power excessive or otherwise. As far as Ham's being able to
run 1500 watts legally CB'ers are allowed to run 4 watts so what's the point
interference is interference regardless of the power used.

And after reading all that has been posted here, you still don't realize that it's not the fault of the ham in question that his radio signals interfered with your electronics, but the fault of the manufacturers who skimped on your gear, leaving out inexpensive components, which saved them only pennies but which would have protected your gear from that sort of interference. Your TV, VCR and telephone are not radios and should not respsond to a radio signal that is proper. So now all the unknowing point all their fingers in the wrong directions.

Of course for us folks without Nicopress crimps (or TDR to know there
is a difference) the old fashioned "Western Union" joint is quite
strong. I cannot give ASCII graphics (an oxymoron?) for it, but what
you do is give the two wiresabout 3 twists together then wrap the tag
end of each wire securley around the wire it has joined. That is
probably not a very good description, perhaps someone else can put it
to words better, or check an older electronics book for it.

Which, BTW is at *LEAST* as ILLEGAL as any activity that the
"ham" might indulged in.
Actually I doubt it was a ham-they rarely cause major problems-they
usually have the knowledge and the common sense to avoid most problems.
Of course, lousy consumer electronics cause way more problems than
poor/defective/illegal transmitters do.

Why is it when a Ham creates a problem with TVI it is the TV,Phone etc that is a fault but when a CB'er creates a problem with same it is the CB'ers fault. A bit of a double standard don't you think. I have been saying for years it is usually the TV's fault but that doesn't seem to work unless it is a Ham that is creating the problem. Don't get me wrong I would have gone about correcting the problem a different way. BTW Bill at least you do admit that Hams do indulge in illegal activities from time to time just like CB'ers.

He was a ham, beyond any doubt. He may also have been a CB-er; I don't know.

It was the opinion of a relative of mine, also a ham, that the fellow was illegally boosting his signal (if it was ham that was interfering).

You simply cannot imagine the frustration of having to put up with something like this, though. The guy was audible on everything in my house with a speaker - including my sewing machine!

They jumped the gun on the Feingold Amendment which never
became law -- it passed the Senate and was stalled in the
House. It was 'sposed to be a rider on a budget bill but it
didn't make it in time. Whew!! Close call....

The situation as I know it from a source in that area was that
a CBer was getting into a neighbor's telephone (power level
unknown), and the CB operator offered to buy her a bullet-proof
phone. This was rejected and the wheels started turning. I
have yet to see the actual ordinance but it allegedly covered
only overpower and out-of-band CB, the same stuff that the
Feingold Amendment would have covered.

As it stands, Lafayette (or anywhere else) has no authority to
enforce CB rules. There is a specific U S Court of Appeals
ruling that is very clear that the FCC has exclusive
jurisdiction over cases of interference to home electronis
equipment.

Let's see if we can keep it that way.

My offer stll stands.

A CB'er is limited to 4 watts and that power level seldom causes problems. If the CB'er is causing problems he is probably running an amp which is illegal and thus his fault.

The ham is allowed 1500 watts and that power level most likely will cause problems with consumer electronics. However there is a ham regulation that requires the ham to use the *minimum power* necessary to make the contact. Many hams ignore this and have the "I got an amp so I'm going to use it attitude". Even the "barefoot" 100 watt guys seldom ever reduce the power knob.

So in many cases both are at fault. The consumer product for picking it up and the ham for using unnecessary power.

The one big advantage of QRP (5 watts or less) ham operating is that you generally have happy neighbors...

I can state categorically that 4Watts is ample to blow your neigbor out
of his house. I've done it myself! 8-) Amplifiers are not the only
culprits - but I grant you they can certainly aggravate an RFI problem.
If you point four co-phased Super Big Guns through your neighbors house
I guarantee you that you'll hear about it.

There are a number of hams running Henry 5k amplifiers too.

> So in many cases both are at fault. The consumer product for picking it
> up and the ham for using unnecessary power.

It's the fault of the Gov't for selecting a band that is completely
innappropriate for what it was originally intended. 8-) (If in doubt,
always blame the gov't, right?)

> The one big advantage of QRP (5 watts or less) ham operating is that you

^^^^^^^^^
Agreed. But you'll find yourself talking to the guy half a mile up
the road through 60dB of noise while your neighbor makes new friends on
other continents!

QRP is a wonderful hobby - but extreme sports are becoming more
popular....

Wish you would modify it to say "some" hams and "some" CB'ers. The vast
majority of both hobby groups operate legally without causing problems.

Don't forget the frequencies that CB'ers operate on have harmonics that
plop right into the TV broadcast bands. Not hard to figure out that
non-type accepted amplifiers can easily boost those harmonics to a
powerlevel that will just kill many underprotected consummer electronics
items.

I wonder who decides who is doing such things? Sounds like a very stupid law that will leave them open to lawsuits if and when they goof up and harrass someone that is perfectly legal. Did the city hire a radio inspecter? I hope the police officers aren't the ones deciding who is "illegal". Most are not qualified to make such a determination. Sounds like, LAWSUIT TIME to me. Just a matter of time before one of their resident police radio "experts" screws the pooch and molests a legal radio operator. MK

Big mistake, Most police officers are not qualified in that field. It
will be a frigid day in hell before I let a city police officer tell me
how to run my radio. He better come back with a FCC FIELD ENGINEER or
I'll be likely to tell him to kiss my rosy red, well you can guess the
rest. MK

It's not the cq, it's drawing it out into a long winded spiel. Ala HF.
MK
Also, I have seen some posts that seem to say that if I say calling cq
on a repeater is stupid, then I'm elitest, smartass , whatever, This was
not my idea, Try reading the ARRL repeater dir, ARRL handbook on
repeater operating practice. This has been around longer than I've been
on a repeater. Calling a long winded cq on a repeater IS considered
stupid behaviour, and it wasn't my idea. But it's a good one. But I sure
didn't just think all this up just to look stylish. MK

Also ironic, is that the higher they place that antenna usually the less
interference problems they will have. MK

In other words, your home entertainment/electronc equipment was
responding to signals that it should have been ignoring,
right?

That is true - the FCC does not have the personnel to fix
problems that the consumer electronics manufacturers should
have guarded against by proper desogn.

> I ended up solving it myself with the aid of a tesla coil. It
> would have been delightful if somebody else besides the FCC had
> been available to help with the problem.

There are all sorts of private-sector organizations which have
come into being in the last few years to do that work (which is
why the FCC doesn't), and in addition many of the amateur radio
clubs throughout the country offer this service to the non-ham
community. All you have to do is ASK, rather than demand or
take the problem "into your own hands".

As far as your solution, you should be fortunate that the
affected radio operator was not a client of mine. Malicious
interference with communications is a Federal FELONY (Sect. 333
of the Communications Act) and my law firm has all the forms
and contact phone numbers necessary in those instances, and we
don't need deep pockets for that, either.

The area of df-ing is one of the most tricky technical areas in
radio law enforcement. I LOVE to get non-technically-certified
witnesses on the stand and rip them to pieces in terms of the
veracity of technical maeurments that the FCC is the expert in.

Leave investigating robberies to the locals and doing df-ing to
the FCC.

> That means a competent
> witness to testify to the illegality of the operation. The more
> sophisticated RF crimes are generally beyond the ability or desire of most
> police agencies.

Making the df and testifying to the results of the df are one
thing. Testifying to the ILLEGALITY (or more accurately,
non-compliance) of what the station is doing requires a
competance in radio law that few if any "locals" - including
the vast majority of police and prosecutors - have.

"On my watch" the FCC staff had to "educate" a whole generation
of Federal judges and prosecutors in what radio law is - a
field wholly unknown to them until we showed up in their
offices and chambers, and these are the folks who are
supposed to be the knowledgeable support of the FCC! Imagine
all thre thousands of individual cities and counties across the
US.....

When I was with the agency it was very apparent that the
"locals" did not have the experience, qualification, or in a
lot of cases equipment to do the job properly. We spent a lot

of time trying to teach the more well-endowed local police
departments to use the df equipment that the taxpayer bought
for them to find interference to their own systems, and we had
to go back time after time because they couldn't evaluate the
data that the equipment gave them.

On Mon, 16 Nov 1998 18:57:04 -0800, Palsgraf wrote:

The proper solution is better funding of the FCC and a better
attitude on the part of The Congress, the Department of
Justice, and the courts to the importance of radio law
enforcement.

Keep the FCC out of investigating robberies and the "locals"
out of radio law enforcement.

> I certainly hope you don't mean me. Having fought with a recalcitrant FCC
> over enforcement laxity I think I speak with a certain amount of authority.

Oh? What aspect of laxity did you deal with? Increasing the
agent slots in the District Offices by ten to twenty times the
present staffing? Persuading the Wireless Bureau to take the
cases that the field folks could have fed them on a regular
basis? Persuading The Congress to fund and support more field
enforcement?

THOSE are the issues involved in why you don't see more df cars
on the street. It's changing now - observe that in the last
two weeks there have been a lot more folks "caught" than in the
recent past. That's because somebody in the "front office"
finally got the gears in gear (kudos to the new Chairman and
Enforcement Bureau chief).

> Add in my QCWA membership, DXCC and local club presidency, field day
> chairmanship and technical committee member I figure I got as much right as
> the next feller to say something about the need for local authority to
> tackle some of the easier interference problems.

You have all the right in the world, but what you are
advocating is bad policy.

If we want to compare qualifications, mine are as a licensed ham
and commercial operator for over 45 years, graduate communications
engineer (Registsted Professional Engineer in several states),
radio law enforcement professional - journeyman and manager,
and communications attorney (admitted to practice in stste and
Federal courts and before the FCC) spanning a 40+ year career,
including 30 years' service on the enforcement staff of the
FCC.

My professional opinion is that radio law enforcement must
remain in the hands of the FCC and not be delegated to the
locals.

My experience with the locals is that they do not have the
background nor the experience nor the qualifications to do
radio law enforcement instead of the FCC. It is a specific
high-tech field, and we cannot afford non-specialists mucking
around in the business.

That's what I've been saying. Radio law enforcement is a
specialty that one has to do day after day just to keep current.

There is a sickness at ARRL. Its called Ring Around The Rosie, I am sure everyone with a half a brain has heard of it before or at least been a victom of the infectuous desease.

It is without a doubt that ARRL has more than Amateur Radio in there best interest.

The new double standard proposals for restructuring Amateur Radio Licenseing is as bad a case of Ring Around The Rosie as I have ever seen.

The cure for Ring Around The Rosie is the proverbial whack between the ears with a 2x4. Old prospectors or anyone who ever used a jack ass knew of this desease and its cure.

The whack in this case would be in the form of discontinuing membership with ARRL and not purchasing their magazine. Like the jack ass, they to will become learn to do what expected of them.

We used to have this dude down the street who had a ham radio.
Everytime he keyed up, some of the lightbulbs in our house litteraly talked with his voice.
Also, I used to pick him up on my soundcard and also on my stereo amplifier.
Did I complain?
You bet, but to him, not the city nor the police.

Tell me, just how did your relative determine that the ham was running excessive power? Did he do a site survey with calibrated antennas, and calculate the ERP levels? Or did he just make an (bad) assumption that "he's coming through everything, so he MUST be running power"?

Remember, a ham is LEGALLY allowed to run 1500 watts.

Don't forget the frequencies that CB'ers operate on have harmonics that plop
right into the TV broadcast bands. Not hard to figure out that non-type
accepted amplifiers can easily boost those harmonics to a
>powerlevel that will just kill many underprotected consummer electronics
>items.
>
Could you please tell me just what is a type-accepted amplifier for CB.
Unless you are considering a legal (or illegal) radio a amplifier of which
it is but not the kind I think you were refering to.

A CB'er is limited to 4 watts and that power level seldom causes
problems. If the CB'er is causing problems he is probably running an amp
which is illegal and thus his fault.
Jones <Jones@nomail.com> wrote in message news:3651B4A9.37AF@nomail.com...

You stated my point very well. We hop right back on CB'ers operating illegally not Hams which is beside the point anyway. You can operate legally and still cause these types of problems regardless whether you are a Ham or CB'er, granted it is a lot easier on the 11 meter band but interference is interference Ham or CB and a neighbor usually doesn't know the difference. If you are in to semantics I will change it to some Hams and some CB'ers. Regardless how it was said I think you got the point.

Someone mentioned that it's difficult for the FCC to determine signal purity and output power. This is untrue. A spectrum analyser in an FCC van parked anywhere nearby will be able to nail down some very accurate readings. The FCC inspector, upon inspecting your station, will transmit on your station with a bonafide legal maximum power signal and again take a measurement. If his is weaker than yours, you're busted. He can also use the opportunity to check your station for signal purity by firing it into the calibrated test set he is invariably carrying around in his van. If your radio is over-peaked, you're busted. He will also check the frequency coverage of your transmitter. If you do not hold an amateur radio operator certificate - guess what? You're busted again. There's no magic to this. In Canada here if a known a**h*le is operating illegally, the DOC will be accompanied by an RCMP officer, or two, whom have very powerful search & seizure priviledges. In other words, if you don't let 'em in, there comin' in anyway. And of course, if you're causing avoidable trouble with an illegal station of any description you really have to ask yourself if you should find another, less annoying, hobby. A DOC inspector once told me that when investigating interference complaints, ninety nine times out of one hundred, the offender is unemployed. There's an awful lot of dick-swinging on the CB - and that's fine. But when you start swinging your dick far and wide enough to piss off others you're gonna get caught!

Thank gawd I type 100wpm......8-)

And in the process she created infinitely more
interfering radiation and noise than the HAM or CB
operator she was complaining about getting the
interference from in the first place!

A real 'educated' solution!

The HAM interference was not malicious, her's
was!

That is why the City of Lafayette is having a commerical radio
repair shop, staffed with GROLs, to act as expert witnesses.
They know the law and the technology.

>
>The only areas should be for local authority, as an example, to track down

Hams are not the only people with technical expertise. And one does
not need to a professional (lawyer, engineer) either. The typical repair
shop, the Indiana State Police have GROLs in house, can provide such
expertise.

Local communities are becoming pissed with the Feds passing laws
then expecting someone else to enforce them, usually on the local tax

dollar. That is what happened with the Brady bill. The new tact is to so fuck things up that the local community wants to take matters in hand.

There are no amplifiers that are Type Accepted for the CB Class D
band. It is forbidden for amplifiers to be made for those frequencies
thus no type acceptance by the FCC. Thus all amplifiers used on the
Class D band are illegal. Go to jail.

Hi,
I have put in place a small web site dedicated to that amazing new mode,
MT63.

Check it out at:

http://members.xoom.com/ZL1BPU/MT63/MT63.html

There are currently only two MT63 operators in the Southern Hemisphere, and
not many more up under! Please join us - it is simple to get going, and not
very expensive. The same equipment will operate many other modes, including
some exotic ones - PSK31, Feld-Hell and MT-Hell.

73,
Murray ZL1BPU

I have a Radio Shack Digital Atomic Clock 63-970. Guess what? It's the
same one that Brookstone and others sell for more money. However, it
receives a signal that is below the AM broadcast band. There is no audio to
listen to. I thoroughly enjoy my clock - it was well worth the investment.

Hi all,

I am taking my Tech exam in December and I am deciding on what type of rig would work for me. In talking to a friend of mind that has his ticket, he suggested that I get a "used" HT and a "used" mobile and use the mobile as a repeater. I like that idea but, he has only heard of this being done so he couldn't give me any info. Can someone out there recommend and/or explain how this setup would work and what equipment (or function) would be needed to perform this task. Thanks in advance.

Mark (soon to be Ham...)

The new clocks are receiving data only on 60 khz.
The WWV clock that Heath used to sell is a WWV only receiver that
scan three of WWVs frequencies, (5, 10, 15 Mhz) and chooses which ever
one is currently stronger.

This was a beautiful station accessory!

MFJ should scrap some of them garbage tuners, and friggin' keyers and
sell something like that!!!

Yes, yes!

I had trouble with a neighbor ham's interference - came in on _everything_ with a speaker, couldn't watch a movie on the VCR, etc. FCC couldn't help - they told me they didn't have the personnel.

I ended up solving it myself with the aid of a tesla coil. It would have been delightful if somebody else besides the FCC had been available to help with the problem.

ZAP!

The tesla coil makes "snow" on tvs and some buzzing, not real loud, in lots of things with speakers for, oh, maybe half a block or so. I set it up in the room closest to the guy's house, attached about 100 ft of wire to the terminals (an attempt at "amplification") and turned it on. He ended up hearing the buzzing, too, and shut down :-). And none of my neighbors could watch tv for about 10 minutes or so, until I turned it off. I don't know if he ever found out what was happening, or who was doing it.

The darn things cost about $200. This one was left over from my brother's pre-college days. Trying a bunch of filters would have been nearly that expensive, however.

I have a lot of elec. engineers in my family. My dad found a way to load down the antenna or something like that, too; it involved cutting a piece of wire to a certain length (depended on what frequency the guy was broadcasting on), grounding it. I could have set it up on my property, it didn't have to touch his equipment. But the tesla coil was easier.

As I told my dad, it's nice to know these advanced technical educations have practical application to everyday life <big grin>.

HI THERE .
Can anyone point me in the right direction , iam trying to find a
source of the mic plug for the yaesu vx1-r mini hand-held , its a 3.5mm
wide jack plug , but unlike a stereo plug it has 4 connections , instead of
three i know you can buy a adaptor which converts it to a standard spker mic
connection , which i have already done ,
biu for another project iam building it would be much less messy having to
deal with the adaptor aswell

so if you know of a source , of new / used plugs please you you let me know
direct at the EMAIL address below i dont often have time to see all new
headers when i come on here .thanks

HELLO THERE .
My ft757 mk1 has developed a fault , its partly dead .
when you turn on the fan comes on for a few seconds then stops
it display dosent light up , nor dose the panel back-lighting ,
the volume works and rf gain ,
it dosent receive , or transmitt , althought a tx led will light TO INDICATE
TX BUT there is no RF power output
the relay inside actually switched over , you can here the clunk , and i
have check it
the fuse it ok
so armed with the info, i have give can anyone give me any clue's to what
might be wrong
with it , i was using it one day , for receive only , and i switched it off
and came back 4 days later
only to find i had this problem .anyway any ideas or comments welcome

(ps) ive checked the battery voltage , and supply voltage and all the diodea
d6-d12 all are correct
anyway please send any replies to me direct please , i dont often get all
the new headers when i come on here
thanks again

Guys, I have reading this thread and have some concerns about code. I have been licensed since 74, I have attempted to upgrade my ticket since then on several occassions but to no avail. I seems when I am able to copy 10 WPM I am blocked and it just doens't matter what I do. Some hams have an antiquated idea if can't pass the CW test of 13 WPM your not really an ham. Well some of us just can't do it. My thoughts are: If GOD wanted me to studder he would have made me like that.

No that I am retired I thought I would give it one last attempt. If it doesn't work i'm going to sell my TS-430S that I bought several years ago for that very purpose. Getting on the HF bands. Two mtrs and four-forty just doesn't cut it any more other than when traveling.

Have a positive day.

This is not an advertisement!

We have been running a contest at http://www.solder-it.com called QSLs on the web where digitized versions of QSL cards are posted each month for voting. The card getting the most votes every other month receives a free Deluxe Micro-Jet Torch.

You don't have to visit the site to take part and if you really dont want to see the other stuff at solder-it.com but want to view the cards, just go directly to http://www.solder-it.com/qsl.htm

Just send your QSL card (or any ham radio related picture) along with your permission to post it written on the back and your e-mail address to:

QSLs On The Web
Box 20100
Cleveland, OH 44120-0100

You can either view your QSL and vote, or when notified that it is posted, vote at: votes@solder-it.com. Of course you should get your friends to vote also. Only one vote per e-mail address permitted. We do not use your e-mail address for ANYTHING other than to notify you of posting and hopefully winning.

Thanks, good luck.

Fred, K8PP

Jim, even if you can only make it to 10wpm, if the ARRL proposal flies
with the FCC, you can have general HF privileges for 5wpm. Bunches of
us are working to reduce/eliminate the irrelevant requirements.

>"sandbagger"

I've NEVER read of a case like this, sounds like an urban legend.
What I HAVE heard is cases that on the SURFACE sound like
this, but when you read the details you see that the case had a
LOT more criteria. Usually these cases are won when the
association tries to stop a HAM but turned a blind eye to others
putting up TV and FM antennas or CB. Once they allow one thing
they can't suddenly come back and decide to enforce on just
the HAM, and even if they come back and try to enforce it on
everybody, they might loose.

I doubt it. Does it have a way to enter all the detailed antenna parameters?
If not, it would report that ground-mounted verticals radiate more power
than 100 ft. tall beams.

****

As manager of an EMC/EMI testing lab, I can guarantee that a vehicle
parked randomly near a radiating antenna in a typical neighborhood would
not be able to measure within 10 db accuracy of the radiated power
,assuming his
antennae and measuring apparatus had zero error. The reflections and
convolutions of the radiated field limit the accuracy. That's why we
spend several
hundred thousand dollars to get a football field sized range calibrated
to less than 2 db. It's a lot of trouble.

You can prove this to yourself by sticking an antenna out the window of
your car and driving around the block, recording the readings. The
variation
which you measure is solely a result of
reflections/conductivity/blockages.
It will be greated than 20-30 db, just maintaining a relatively constant

distance from the radiator.

Please remember the old phrase I before E "except" after C.

Reciever is spelled RECEIVER and thier (does not conform) is spelled THEIR.

It just shows that most of the people here on the NGs don't know how to spell.
I wounder what else they don't know?

Please see attached.

Hi and thanks for reading this. The name is John and I
have the following For Sale or Trade;

6 Mtr. All mode, Kenwood TS-600 with desk mike and
manual.

2 Mtr. All Mode, Yaesu FT-225RD with desk mike,
memory unit and manual.

Yaesu FT-208R 2 Mtr portable with desk charger, wall
charger, spkr-mike, manual and a fairly new battery.

Kenwood TR7800 2 Mtr 25 Watt mobile with mounting
bracket and manual.

CIR Astro 200 80-10 all solid state HF digital transceiver
100 Watt with AC power supply, hand mike and manual.

TPL 450 Mhz. brick, 25-40 W in for 70-100 W out. Model
PA6-1FE covers 400-512 Mhz.

two (2) GE Phoenix-SX mobiles one on VHF and one on UHF.
Both are 16 channel, dual priority, programmable with
the hand programmer, all manuals and thick frequency
program book, mikes, ext. spkrs and mounting brackets.

KLM Echo 70 432 SSB/CW 10W PEP with ac power supply,
hand mike and manual.

two (2) UHF portables one GE MPR 2 channel 5 Watt, ext
spkr-mike and desk top charger. Note battery no good.
one Maxon 4 channel 5 watt, ext spkr-mike and desk top
charger with fairly new battery.

I would be interested in trading for;

Mirage 2516G 2 mtr. Linear
R6000/R7000 HF vertical
HF mobile ant. (Comet or Hustler)
440 Mhz or Dual Bander mobile
220 Mhz mobile
Pent.II Computer or/CPU & Motherboard

or will sell for a reasonable offer on any item. Please
give John a call at 520-868-1337 (Arizona).

> the HF bands.

Welcome back OT. The craft is something that you never lose. My OM was
a professional CW op for 30 years, and had been a ham in the early spark
days. He left the biz and went on to other things not quite so full of
travel, and 20 years later decided to take up ham radio again. When he
went to take the test at the FCC office, it all flowed again like water
at the 20wpm test speed. It really is something that once learned,
you never lose. It only gets a tad rusty.

> I must agree that the idea of a CW contest does scare me a little. I did make

> slow like me. Just find a quite spot up the dial and call CQ. People will
> come.

We all have been a bit gunshy on the ol' sendin' iron, after a dry spell.
It comes back very quickly. Upband, things were pretty good, and you could
hear the fellas poking along at 15wpm doin' jus' fine. Most of the game
is jumpin' in with both hands flyin' and making it work, the old fashioned
way. So what if you blow one or two....you pick up many more on the fly.

> I think for the most part, CW operators will put up with slow CW stations
> knowing that that is better than no new CW stations. If all CW stations were
> fast then you have no new comers and by that CW will die.

Any real CW operator will 1) always come back at the QRQ of the other
station, and 2) be able to walk the key at whatever pace and gait will
get the message across, regardless of the pileup or QRM/QRN. Sadly,
of late, many the computer CWists seem to have lost that skill in the
heat of the fracas, but many of the keyer ops can handle the QRS properly.
Also, if you are a good CWist, in the heat of a pileup in a contest, a
dash of swing on the sendin' iron has always gotten me through, unless
the competing stations were 100 over 9 on the linear scale. It has the
``standout character'' that always reels the other end in.

Good luck Allen, and fer sure, jus' grapples ye up yer tin cans atops
yer noggin, an' a'readys ye up yer sendin' iron at the fore.....

> Allen Cutts
> N4OZI

...it makes fer some fun ham radio that way....

Contests are just one aspect of amateur radio. Some folks take to
them like a duck to water, and some don't. Not everyone needs to.
Not everyone should.

Chewing on that ol' ham rag is one of the very traditional aspects
of the game. For most, that is all that is wanted. Nothing can
be finer than the yarns that are spun (and the ``fish that got away''
sized stories) on the average ragchew. You meet a lot of good
folks that way, and can learn a lot of history and practicum on the
way. One needs to get a little beyond the absolute entry level to
get into the conversational flow on CW, perhaps, but even at the
lengthy entry level 5wpm gait, hitting that first 30 minute or hour
long QSO is a milestone.

Some folks contest everything that they can get up to the key with.
They are, perhaps, a bit dedicated to that aspect. That is fine.
Others, like me, do an occasional 'test to keep the fingers nimble,
and the ears tuned. One has to admit that a fiery 'test or two will,
indeed, stoke the fires of a slightly rusty pair o' earbones, and
shaky fingers.

I find that of all the 'test sort of things, that ancient and venerable
Field Day fracas is probably the best of them all. It serves several
noteworthy functions. First, it allows one to develop practicum in
useful portable/emergency skills (although I sometimes wonder when
the air-conditioned RV's roll up....too easy!....(:+}}...). Second,
it is a great way to introduce new hams to a lot of practicum, in
one packaged deal. Third, it can be a good weekend in the boonies.

A real challenge can be had on the 160M CW 'test. That really will
make an op fine tune the ears and the antennae, for optimal results.
Also, that contest can be done with really dinosaurian equipment,

whereas some of the others really are stuck in computerized operation.

Sometimes there are really wierd 'tests that have a rather limited, yet devoted, following. For example, the Antique Wireless Association has a yearly antique CW contest using classic 1929 style amateur gear. That is coming up next weekend or the weekend after on a narrow slice of the 80M band down below 1AW's bcsts. Those are some really funky, yet really historical signals, that you won't hear but few times in a lifetime. Sadly, one of the premier ops with his ringing primary keying note went SK and won't be there anymore (Bruce Kelley/2AN). But, that kind of contest can be an interesting way to meet people, and learn lots of things historical in nature and not the usual 2m rubber duckie fare kind of thing.

Although contesters can tend to be real diehards, and somewhat stuck in that buzz/buzz quick 10 second round trip QSO, sometimes the various peripheral aspects of a particular contest can be rather enjoyable and rewarding. It basically boils down to what you might want to try, and if it works, fine, ... if it doesn't fine, too.

Good Luck, all reading the thread....

>
>I also need the HT because I don't want to move the mobile in and out of the >car when I want to transmit in the house.

There are several other issues here, besides just capability. For example, crossbanding is really a form of remote base operation. You can't operate a remote base frequency with the control frequency below 222 MHz (review Part 97), and the signal for example relaying the repeater on 2 meters to your 440 HT (you do need either a 440 Handheld, or a dual bander because you will be controlling the crossbanding rig with the HT) has to be legally identified, and most dual band rigs capable of crossbanding make no provisions for the ID requirement. One trick I've seen tried if the two meter repeater isn't all that strong is to transmit with a dual band HT on 2 meters on the 2m frequency the dual band rig is listening on, and hopefully it will be repeated giving you a legal ID. I assume that others explaining that in band repeating is difficult from a car was sufficient explanation of why one band can't be used. Please also note that it is possible to have a crossbanding rig going from 2 meters to 440 if you can bring up and shut down the crossbanding on 440 or the 222MHz bands or some other frequency, but that is a more complicated option, and not one supported by crossbanding rigs. For the way that most crossbanding rigs work, you will be limited to using 440 to control the rig.

It's "illegal" (or at least a violation of federal regulations) to operate
anything that emits more than certain levels of RF on certain frequencies.
It's more "illegal" if it interferes with a licensed RF transmission and
much more so if the interference is intentional and malicious.

> When you deliberately isolate one group of hams from another, differences
> will be the predictable result. Thank the ham radio caste system for the
> differences in operating procedures between HF and VHF.

Is this a documented fact? Or another, in an ongoing example of fact based on one man's opinion of the world around him?? In my OPINION, the latter as opposed to former. You're beginning to sound like Rush Limbaugh. No matter what is said, he always seems to spin it into an anti-Clinton tirade. No matter what is said here, you always spin it into a code/no code tirade.

I happen to agree with you about the calling CQ on a repeater, but the reasons are not due to Morse code. It's due to the FACT that those on the repeaters do not take the time to listen first and then ask questions. They then take offense when suggestions are offered. AND THAT'S A FACT YOU CAN TAKE TO THE BANK!!! Nothing to do with code or the elimination of a test. Just good ol fashioned DOING IT MY WAY!!

So you find using the internet more difficult than building a computer?

>How many of today's hams actually build their own equipment?

Quite a few. The high volume of traffic on the various email lists
devoted to home-building shows amateurs are prolific as ever.

3243. Re: Ring Around The Rosie

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-18 00:00:00 UTC
From: John <mstr-jl@swbell.net>
Message-ID: <aVG42.1791$G41.23611@typhoon01.swbell.net>
Source record: 157678

Every change in rules governing amateur radio regulations provokes groans and moans of "this is the end of ham radio", "we'll end up losing our spectrum space", etc...

The ARRL is trying to bring new people into the hobby, which they have been trying to do for the last thirty years, and they've succeeded (maybe too well) with the no code tech license, and now, the coming revisions to a/b/c license...

I'm all for more hams - I like most of the hams I've met, but there has to be more spectrum space for all us to operate - in some area of some bands we're stepping on each others toes now. Double or triple the number of hams licensed to operate there, and...I hate to think of the possibilities...

I have nothing against cb (I have a couple myself for highway travel), but I don't really want ham radio to end up like cb did.

What's the solution?

You aren't alone in that feeling. I believe the major consummer
electronics manufacturers would like to keep you ignorant of the problems
of RFI. Nearly every product is sold with an instruction book and in the
front of each and every book is the warnings page. The various hazards
attendant to using their equipment are listed on this page(s). It would be
SO EASY to include warnings and possible solutions to RFI at the same time
but they don't. Wonder why? <Grin>

I think I would have to agree. An idiot proof box is probably not going to
be available. That still does not mean a local police agency cannot
successfully prosecute an interference problem if given the approval of the
FCC. The FCC is not the only source of competent RF engineers. I can see
a whole new retirement scheme for FCC field engineers in the "local police
agency RF consulting" arena. Having RF problems? Call RFI Busters, Inc.
and we can locate, identify and provide expert testimony for the
prosecution. Hey, it could happen.

That pretty much says it all. I think few CB'ers are using 30 year old
amplifiers and to my mind I tend to discount those old boxes. Heck I have
220 radios that can access the "lost" 2megs. I am not likely to use them
but I don't think newer amateurs are able or willing to even bother buying
these older 220 mhz rigs. The fact that some old boxs still exist is
probably not germane to the discussion.

Nope. No CW, but closer examination reveals that it DOES have both AM and FM. No FM repeater offsets, though. Imagine that...on a "10-meter" radio. But hey, you CAN get a package deal on the Apache 240 with "Tips & Tricks" modification manual AND magnet-mount antenna for $99.99. Gee, this antenna is only a 2' loaded whip...but I'm SURE it's tuned for 10-meters, right?

Message-ID: <9197-36534DA8-21@newsd-131.iap.bryant.webtv.net>
Source record: 157694

I rcvd my lic 10/13/98 and after weeks of research and advice decided on my station equipment.1) Alinco DJ-191TH HT that I already have and enjoy due to large display and programming ease, and ON ORDER: 2) IC-2100H which I will use as base 90% of time, and 3) Ten-Tec Scout HF.....
Everybody is unanimous on the value and quality of the Ten-Tec. On the Icom, however, I went by price compared to features and quality. .....may have been an oops.....NOW a ham tells me how horrible Icom 2100H is and has a bad "intermod" interference problem and to prepare to spend 100 bucks on some kind of filter.....Man, if this radio is this bad, how does Icom stay in business?????
Please let me know what you think...PLEASE....and if it gives me any problems, Icom will get it back again, and again and again, and again, and again, and again, and again (sorry Burt :-)) until they spend more to keep checking it out than the unit cost! Help...although I'll find out for myself in about 2 days when it comes in!!! All the best to all...hope to QSO soon with some of you guys!

I doubt it.

First of all, there is no "free speech" obligation for a private association such as a condo or homeowners association. The First Amendment applies to governmental actions, not to private party or group actions. In othert words, I have no obligation to respect your "freedom of speech" unless I am acting in a govrenmental role.

Secondly, there is no such thing as a "PRB-1" Federal preemption invalidating amateur antenna restrictions imposed by private organizations such as condo or homeowners associations. There is preemption of local government zoning and permitting restrictions. There is preemption on both private and governmental restrictions on installation of TV receiving antennas and video receiving "dishes" but this preemption is specific and does not apply to those or other antennas when not installed solely for TV/video sqatellite reception.

Thirdly, knowing how Florida courts have been treating radio amateur tower matters, for instance, I would be very surprised if they would find in favor of the amateur as opposed to the condo association.

Finally, the leading case in the field of "amateur rights" (or more acuurately lack of same) is Howard v City of Burlingame, a case from California heard in the U S Court of Appeals for the Ninth Circuit (the next level below the U S Supreme Court). Uncle Vern tried to sue the City asking for money damages for violating his "civil rights" and First Amendment Free Speech rights in denying him an antenna permit. The Court held that there are no such rights conferred by the holding of an amateur license, and therefore no damages could be awarded.

This case is the only case that has dealt with "rights" per se. It has not been contradicted or overruled by any other case in

the country.

> As manager of an EMC/EMI testing lab,

The you can certainly understand that making the measurment is
the easy part. Interpreting it is the more difficult task.

> I can guarantee that a vehicle
> parked randomly near a radiating antenna in a typical neighborhood would
> not be able to measure within 10 db accuracy of the radiated power
> ,assuming his
> antennae and measuring apparatus had zero error.

The question of compliance is transmitter power level, not
field strength, ERP or IERP as in EMC measurments.

The measurment of transmitter power is not made by observing
the absolute field strength and working it backwards through
antenna gain factors, although most experienced FCC agents can
usually make a good educated guess from the signal level and
spectral purity as to whether the station is in compliance or
not just from the before-inspection measurment described below.
You can't replace experience with instruments.

As described above, the transmitted signal level as observed on
a spectrum analyzer is first noted before inspection. Without
disturbing the receiving vehicle, equipment or antenna, an
inspection is made where the station transmits and the output
power is measured by the direct method (antenna line measurments).
The received signal level is noted by the agent left behind to
verify that the receiving equipment and the observed orientation
of the antenna are not changed prior to the second measurment.
The relative change in signal level, expressed in dB, is applied
to the measured power to determine the original transmitter power.

There are specific "fudge factors" that are cranked in to cover anomalies, usually in the station's favor.

This method is the accepted method for overpower enforcement purposes and has withstood several challenges, some of which I have had to defend against.

Additional factors involved in determination of compliance which are not easily measured by instruments are the amount of time the inspecting agent is kept at the door, the hard-to-hide characteristic "tinkle" of PL-259 coax connectors being undone in a hurry, the presence of a dust-free empty warm spot on the otherwise jammed operating table, and the attitude and cooperation (or lack thereof) of the operator involved.

As the original poster said - there's no magic to this. It's experience, not rocket science.

In your dreams. Every radio regulatory agency in the world,
including the FCC, would have snapped them up in a hearbeat if
such things were "available".

There may be technology to measure certain parameters easier,
faster, or more accurately, but the decision as to whether a
transmitter is "clean" can only be made by a trained and
qualified radio law enforcement professional who knows what
"the box" is telling her/him and is qualified to determine from
that data if said operation is in compliance.

Local law enforcement officers or radio technicians do not fit
in that category. Trained and certifioed FCC agents do.

It IS happening - I am the regulatory counsel and engineering
manager for one such firm, whose nickname is "Spurbusters",
BTW, specializing in interference resolution and compliance
evaluation for the public safety sector.

Telephone number on request.

The FCC wanted "private enterprise" solutions and wanted to
reduce the payroll, right???

The public is starting to learn that it was cheaper to have the
FCC do it than to reach further into their own pocket to pay
"private enterprise".

Simple enough, CBer's who run high power invaribly transmit as much
of-frequency trash as they do on-frequency signals. Much of this trash is on
frequencies that ARE properly being responded to by TV's, VCR's etc. The result
of the JUNK that CB'ers are sold by the profiteers who also convince them a 2540
watt dirty amp ia s full kW.

> A bit of a double standard don't you think.

No, I *DON'T* think, I KNOW not.

> I have been saying for
> years it is usually the TV's fault but that doesn't seem to work unless it
> is a Ham that is creating the problem.

When CBers operate legally, that can be correct. Most of the time the CBers who
cause this TVI/RFI simply aren't operating legally, although many evidently
don't know what *legal* is.

> Don't get me wrong I would have gone
> about correcting the problem a different way. BTW Bill at least you do
> admit that Hams do indulge in illegal activities from time to time just like
> CB'ers.

Those hams that are found operating illegal CB stations are just at guilty as if
they were not hams. Some hams posting here have admitted to operating Freeband.
Why any ham would jeopardize their ham license by engaging in that sort of
activity is mysterious. Evidently they care little for their ham radio licenses
and activities.

Yes, folks after a successful time with the JOTY award, My staff here has suggested that we have a new set of awards called the "Crummy" awards!

I'm gonna give you the chance to vote on several:

1. The worst person on 3901
a: PorkButt
b Vietnam Dan
c Brother Stair
d Captain Truth
e: Write in your own:_____

2. What the wost noise you've heard on 20 meters:
a AF2Y's treadmill
b PorkButt Song
c Tarzan Yell
d Your Choice:_____

3 What the worst Ham Rig you've seen on the Market:
a TS-520
b Icom 706 MKII
c RS HTX 202
d Your Choice:_____

4. Should Liberty Net postings countinue on this NG?
a Yes
b No, If you vote no, answer why you are against free speech

5 Who has been the worst poster to this NG?
a. Burt Fisher
b Masataka Noda/Cuite Boy
c CBRambo

6. What would make the group more interesting:

a. More Liberty Net/3950 postings
b less 3950 postings
d _____

7 Who's your favorite 3950 pesonallity (except W9ART)
a WB4AIO
b W1WCR
c K5BLB
d K5ZU
e WA9KJI
f: _____

##
8. Why should KV4FZ have his liecense renewed:
a. He is friend to many
b. He looks at the Intercon Net in the eye and exposes them for what they are
c Herb has help many disabled kids at the Courage Center While in college.

These questions were raised throughout the year and were tracked by our staff.
Please take the time, you never know who will get a "Crummy" !

Sorry, Mark. There's numbskulls in every hobby/profession. In answer to your question, the answer is likely NO. A repeater needs to receive while it is transmitting on a different frequency. Most (relatively inexpensive) ham mobiles can not transmit (in band) while receiving. You can, however, get a dual band radio which is capable of transmitting on one band while receiving on another band... it's called cross-band repeating. Of course, it would take a dual band radio to use this repeater from a user standpoint. Also, there are commercial type radios, GE MASTR II for example, which you could pick up used pretty cheaply and that radio can be modified to be a repeater. However, you would also need a duplexer to hook both Rx and Tx up to an antenna. (Two antennas would not provide sufficient isolation on a mobile.)

Good luck.

I have to agree that cost becomes a big factor in a mobile cross band repeater setup. Just to make a clarification the mobile needs to have cross band repeat capability ((some also have capability to rx control info (change memory channel and talk back to verify what channel your on tone control ect.)) and you can work with just a single band ht (buy a 440 ht if you want the mobile to tx 2m, buy a 2m if you only want to run on 440 or buy a dual band to work either 2 or 440). You might want to consider a dual band ht if you think you might be able to rx the reapeater better with the ht than you could with the modile (Ex. hiking on a hill at the edge of repeater coverage) so you can tx 440 to the car Xband to 2m tx to the repeater and listen to the repeater on 440 from the car or direct on 2m (presto a 50w ht)

Good luck with the exam Mark, since your going for a Technician class I'll assume your thinking about operating VHF/UHF FM. Since your just starting out I'd suggest a simple 2m HT, you should be able to find a used one for $100 or less, if you look long enough you might find an old one with thumbwheels for $50 or so.

Get on the air and have some fun first, meet some people and talk about what you want to do with ham radio. After you have been at it a while you'll have a better feel for whether you want to buy a mobile rig or get involved in other facits of the hobby.

> In talking to a friend of mind that has his ticket, he
> suggested that I get a "used" HT and a "used" mobile and use the mobile as a
> repeater. I like that idea but, he has only heard of this being done so he
> couldn't give me any info.

If he's only 'heard' of it being done then I wouldn't reccomend you follow his advise. Yes a dual band mobile can be set up to cross band repeat, that is listen on UHF and retransmit on VHF or visa versa. I know of no one that uses this mode in a normal repeater set up although I know it does exist. What I have seen many times is a fellow wanting to use his HT inside an office building or shop but can't hit the repeater due to the degradation of signal inside the building. So he sets up his mobile parked outside in a cross band repeater mode and can now hit his favorite 2m repeater. The HT transmits on UHF, the mobile picks up the signal and retransmits on VHF, when he unkeys the mobile is listening on 2m and retransmits to the HT on UHF. Thats one application for cross band repeating. Keep in mind that no one else could use your mobile repeater as a normal 2m repeater because it's not retransmitting on VHF.

Now a 'normal' repeater set up would be on the same band that is, transmit and recieve are both on 2m but shifted 600KHz apart, same concept as above but the repeater is listening on 146.64 and transmitting on 146.04. When you key your HT it transmits on 146.64, the repeater reciever picks up this signal and retransmits it on 146.04, the guy cross town is listening on .04 so he hears your signal via the repeater. When you unkey your HT is now listening on .04 and the guy across town keys up his HT transmitting on .64 and around we go. This set up involves a split site for transmit and recieve or the use of duplexers which need to be tuned exactly for transmit and recieve frequencys.

> Can someone out there recommend and/or explain how
> this setup would work and what equipment (or function) would be needed to
> perform this task. Thanks in advance.

Setting up a repeater, even with the 'off the shelf' repeaters is not a walk in the park. Again, I'd suggest a simple HT for your first purchase until you figure out where you want to go. After you start looking at whats involved with a repeater you may decide it's not what you want, remember as a Tech you can operate satellites, 6m SSB/CW/FM, 6m is a great DX band when open even with a modest j pole or ground plane antenna, you can operate ATV (amateur television) and a whole host of other things.

Ed, it sounds like the rx is OK, that is to say when it works it works 100% .
I'd take a long test clip, hook it to the center of the coax then connect to
several points inside the rig, start at the inside of the coax connector, if it
works well then perhaps the coax connector is dirty or not making good contact,
if it's still failing move to the coax relay etc. A schematic would help but
that's an older rig and you can probably trace where the rx signal goes
visually. A poor mans test proceedure, but probably not a bad start. Key the mic
a few times to cycle the relay, just make sure the drive is turned all the way
down, or once your test takes you beyond the relay hook up a dummy load to the
output.

what if the cops get an idiot proof device that the FCC approves that would be a matter of green light/red light. Either you are clean and within power limits, or you're not. It could have a dial on the front (shaped like a doughnut) that had several settings. They could be:

Amateur
C.B.
Commercial FM
Commercial AM
TV

Such tecnology is available.

Oh BS Jones. The FCC requires, and all commercially-made transmitters have mucho expensive circuitry to minimize interference - circuits I paid for when I bought my rigs. The FCC has also begged reciever (TV, etc.) manufacturers to include a few simple componants that'd add less than $5.00 per set for decades, all to no avail. The CBr and ham have already done their share to mitigate the RFI problem by buying legal equipment. The TV couch potato has done zip. I once had a neighbor pissing and moaning that my rig was making him miss (gasp) Dallas. Turned out the RFI source was his wife's hair dryer. I told him I'd worry about my rig right after he put some $$$ into fixing his TV. Same goes for the rest of the whiners.

> to use my electronics without hearing my neighbor added insult to injury.

Well, while his attitude may have been less than accomodating, that is basically the way it is. A radio operator is obligated to ensure that his station is within the rules, and technical requirements for the radio service that he is part of. Once he can prove that his station is clean, there is very little else that he can do to eliminate the problem (Other than not transmitting at all). The fact that his fundamental signal is overloading your equipment is most likely the fault of the consumer electronics manufacturer's inadequate design. The FCC web page lists telephone equipment that has been tested and found to be "RF resistant". They haven't gone beyond that though. It's tough to test every product.

Some hams offer to purchase the filters to try to help their problem (They're not THAT expensive), but they hesitate to modify or work on neighbor's equipment due to the eventual liability issue. If anyhting happens to the equipment, at any time in the future, it will be blamed on the ham's work, and another hassle will be born.

>
> Frankly, my attitude at the time was, "Keep your *@#! radio waves off my property." If this happened again, I'd just hire an attorney.
>
> kathleen

I don't know what an attorney could do. You are now opening the can of worms over who's rights have priority over another's, and the method for determining that. It is currently not possible to completely block his RF from your property. There is no god given right to the enjoyment of interference free TV.

Put yourself in his shoes for a moment, what if something YOU enjoyed greatly, annoyed someone else, through no direct fault of your own, and they demanded that YOU stop your activity, so that they could enjoy theirs? How would it make you feel? After all the time, and money you have invested in your hobby, and all the friends that you've made over the years.

I read a case in Florida, where a condo association tried to prevent a ham from erecting an antenna. The ham sued the association using the grounds that they were violating his 1st amendment rights, by preventing him from communicating with his lifelong friends, among other things. I believe that he won the case.

Thanks ED,

Crossbanding is what I am interested in doing. I pretty sure that I can't hit any repeaters with just a 5w HT but, I know I could do it with a 20w-50w mobile. I would like the mobile because I enjoy listing in the car and when i do get my ticket I would also QSO with a friend of mine while driving.

I also need the HT because I don't want to move the mobile in and out of the car when I want to transmit in the house.

So now that you know what I want to do and my reasons for wanting to do them, do you have any recommendations?

I would like to say "Thank You" for taking the time to give me some advice.

Thanks

Mark

I've wiped out cable channel 18 with 2 watts on 2m... local cable
company had a leaky line in the neighborhood. Wouldn't have known I
was doing it if I hadn't keyed up a 2m portable in front of the TV.
Did a little test and drove around the neighborhood and found the
interference was worst around a certain house. Informed local cable
company of problem, but never saw results... at the time, the
franchise was through TCI, who had a horrible customer-service
reputation in this area.

Here lies the problem! Only the FCC, and the FCC only, has the power to enforce radio problems. A city trying to enforce radio matters will just lead to failure in court. With the city losing! Don't take my word for it, ask any lawyer familiar with rf cases. MK

With all due respect, that's the same (no more recent than
1995) Don Stoner material that I have been seeing there for
years. Tower restrictions, both writing them and fighting
them, is one of the "niches" of my legal practice, as is
advising both Licensees and Homeowner/Condo Associations "when
to hold 'em, when to fold 'em".

I can find nothing in the material on that web page that shows
that the case ever went to suit (i.e. court) and that a court
ruled that there were enforceable "civil rights" or "free
speech rights". Mediation/arbitration does not constitute a
lawsuit.

Is there a different place that you want me to look?

> > First of all, there is no "free speech" obligation for a

If the Association backed down, it is a victory for the
antenna owner, but does not in any manner establish any
citeable law or precedent for use in any other situation.

>
> But it DOES shed some grey in the area of "Unsightly antenna aesthetics"
> issues, and one could make a case, that if a TV antenna is deemed
> acceptable, then why not an equivilently sized ham antenna?

That's because the preemption for TV/video antennas is not
based on aesthetics, but is based on the Congressionally-mandated
policy that all such services shall be made available to all
viewers without distinction. There is no such parallel for ham
radio. The FCC has been reluctant to impose any more antenna
preemptions unless there is a Congressional mandate to do so.

Ths issue of aesthetics, BTW, is preemptable in a PRB-1
situation (local/state zoning, permitting, or ordinance). Some
states have extended this type of preemption to private
covenants. Others have not, and procedures vary from stste to
state. In California, state law provides that a retriction is
presumed reasonable unless it can be shown otherwise, i.e. the
burden is on the ham antenna owner to show that the restriction
is unreasonable, not on the Association to show that the
restriction is reasonable.

The guy who got me started in the field of antenna law, Ed
Peck, K6AN, a now-deceased prominent amateur and attorney,
taught me the first lesson of aesthetic challenges some 30
years ago. When I consulted him about the validity of a
restriction that said "No antennas of an unsightly nature may
be erected", he replied "Antennas are works of art. Go ahead
and put it up."

The best weapon against aesthtic challenges is preemption of
such challenges, otherwise you are arguing "how up is up".

> Issues of
> selective enforcement and other double standards rise to the top of the
> sludge.

Selective enforcement requires that the different individuals
are doing the same offense. This is not the case here. A TV
antenna =/= a ham antenna.

Unless one can show an improper personal agenda or so-called
"unlawful discrimination", i.e. based on race, religuion, etc,
targeting the individual, there is nothing wrong with selective

enforcement.

> > Finally, the leading case in the field of "amateur rights" (or

> >
> Not surprizing in the liberal thinking state of California, where
> individual rights are often disregarded for the sake of the group with
> the most political influence.

The decision came from the U S Court of Appeals for the Ninth Circuit, a Federal court, not a California court. Judges in that cour are drawn from such "liberal thinking" states as Idaho, Alaska, Arizona, Nevada and Washington, as well as Hawaii, Oregon, and California.

"Liberal thinking", at least with my 1960s definition of "liberal", would have conferred rights on the individual whether such rights existed or not, creating them as necessary.

The Ninth Circuit's decision was based on a careful reading of the legislative intent of The Congress in granting the FCC authority to issue amateur license and the rights and privileges to be conferred and not to be conferred thereby.

Because the U S Supreme Court has not overruled this case and there is no other case in any other Circuit that is at odds with this finding, it is binding authority in the Ninth Circuit states and persuasive authority in all other Circuits and states. That means that unless a (Federal) Circuit court in some other Circuit wants to rule otherwise, it remains "good law".

Dick,

All I can tell you is that these were advertised
as CB amps and have a type acceptance sticker on
them, which is why I saved them. I figured they
may either come in handy some day in court, or may
become collector's items.

Dave,

All I can say is that I wish I owned a scanner so
I could scan in some of the literature I have
describing them and also the type certification
tags on them.

I do know that the literature mentioned and
referred to 'CB' channel 23 (27.255 MHZ) many
times....

Don't exactly know where the thread started out, anyway...

Dennis,

Just because a device has a Type Accepted sticker on it, does not mean it is Type Accepted for what it is advertized for.

As Mr. Carrol points out, the amps are probably legal for business band, or some other legal use.

You can look up the Type Acceptance #, to find out what the device IS legal for.

The highest power ever allowed for "CB", was Class A (UHF FM), now known as GMRS. It allows 50 watts at the antenna port of a Fixed Base station/repeater. Class D is as Mr. Carroll explained. Always was from the beginning.

However, there is some minor loophole in the Class D CB band, that does allow for higher power 25 Watts Carrier, but as I recall, it was not a voice mode, nor was it for common everyday communications.

Enjoy!

It's not quite building my own radio, but my first 2 radios didn't work when I got them. The first is a Kenwood TM261 and the second is an Alinco DJ180T. I repaired both of them and they work flawlessly. I did build a 2 meter J-pole out of some old copper pipe I had. This goes to show that at least a few of us still do more than buy a radio, buy an antenna, hook it all up, ad get on the air. Tom KD7CDC

Could be it takes 100mW from an HT and outputs a legal
3 watts.

Hello all,
Looking to buy two working Kenwood IF-10C interface boards and cables.
This board was an optional accessory for the TS-140S and other
unknown models. Please email me at: kb5rfn@juno.com if you have one
for sale. I do not check the newsgroups very often.

Thanks, Mike

The 530 had several different main boards inside, seems like each batch was different. You may have the board where the 0 ohm resister is pad 15 (very bottom of the row next to mounting screw), pad 13 is directly above. If I remember correctly these pads are on the back side of the main board on the bottom left hand corner, looking at the radio from the front. The Yeasu service dept would fax you the mod sheets with diagrams several years ago, don't know if they still do or not?

Cecil, I haven't heard about this new proposed program. Do I understand
you correctly. Having a Tech-Plus ticket will entitle any ham having
such a ticket general class privledges?

Now that's hard to believe, finally a positive step for amateur radio.

Guys and Gales like myself who have had code problems for numerous years
will move up a step. Not to be nasty, but, I guess that will iritate
the avid code enthusiastic hams.

When is this program to take place?

Jim, N3BRS

If you mean the TS870 or the TS570 the info is in the manuals which are
available for download at the Kenwood FTP site. Also the TS570 windows
control software can be gotten there. I have used the old Qbasic to
write control programs for my TS870 and it works well.

Try http://www.copper.com/

If you place an online order with Copper, ask them to send you an email confirming that they received your order and have entered your order into their processing system. The last time I placed an order at Copper's Web site, it took four weeks to receive the item I ordered. For one reason or another, my order was received but was never entered into Copper's order processing system. It took two emails and a phone call to finally get the item shipped out. Buyer beware. 73.

Actually, that's no problem. I've converted an AM CB xcvr to 10m
(by changing a single crystal) and use it on CW by keying the B+
to the driver stage. No chirp at all. I could do the same thing
with this Cooper rig. No QSK, though. Got an 800 number for Copper?

I believe that our resident expert on FCC regs will confirm that there has never been a power level authorized for Class D citizens band beyond 5 watts, other than for SSB which as I remember was 12 watts PEP, all input. Any amplifier covering the 11 meter band which shows FCC type acceptance has either been modified from some other service or is displaying fictitious documentation.

whew people! slow down. If you didn't notice, the post was tongue in cheek.

We all agree that some form of regulation enforcement is needed. No one is going to let a bunch of Barney Fifes running around looking for antennas. Here's how it might work when the local cops are given the task of policing Amateur radio and C.B operators:

Neighbor A is getting a little RFI over his phone on saturdays while he has his usual 2 hour chat with his brother on the opposite coast. He either asks Neighbor B to turn down the power, or just calls the cops without asking. Either way Barney is called out to check out the "pirate radio station" next door to neighbor A. He listens to the RFI and determines that B is indeed bleeding on A. He impounds B's equipment and a hearing is set.

The judge decides that this might be a good way to make some money and he also remembers that antenna farm his trashy neighbor used to have, so he levies a fine. B is either rich or is a member of Radio Recreation League and they have some pretty good lawyers to appeal the lower court's opinion.

The second court has a judge that is not a slouch and it finds that the lower court's decision is not adequate due to the fact that Barney was not qualified as an RF engineer. In its opinion the second court sets a precedent that any further cases have to be investigated by qualified persons.

The police department is forced to employ either private contractors or qualified individuals in order to satisfy their "policing" mission, and eventually, after some bumps, we might have a system in place that is able to deal with some of the lids out there.

How do you know that it's not a cheap defective phone? After all in
about 94.3 % of phone RFI cases , the phone is at fault. Maybe the ham
next door is talking to his brother on the other coast? What would that
have to do with it? Pirate station? Are you sure? He listens to the rfi?
okie dokie, then determines that B is bleeding on A? How did he
determine that? Dunno, but from real world experience in phone rfi, I'd
say he is fairly incompetant. He impounds B's gear? What ? The FCC
probably wouldn't go that far in a case like that. Actually, if the FCC
was there, they would tell the phone owner to get a real phone or a
filter. They would check "A" for spurious emmisions and if clean, "A"
would be free to get back on the air. This whole scenerio is why I'm so
dead against this ridiculous idea.

clipped judge jibber jabber...

Their policing mission? Their policing mission is to catch crooks. IE:
robbers,drunk drivers,mass killers etc. They really don't have time to
babysit with people that are hearing their neighbors on the telephone.
Considering it's usually the problem of the telephone owner makes it
even more silly. You wouldn't call the fcc to catch a robber,
To call the police to check a radio problem is just as silly. MK

Hi Jim - if you've got some HF privileges (you didn't state your class
of license) why not get on the air and work some CW daily? At any speed,
even 5wpm, it's a blast, and it will be a fun and natural way of
increasing your speed. I can't think of anything more boring than to
listen to code tapes, but copying it on the air sent from a new friend
in a far off land adds an excitement that you won't find using the tapes.

That's because you didn't look in the correct location. Operation of your Tesla has to be in accordance with Title 47 CFR Part 15. The CFR collection can be found in the government documents section of your local library. Remember, ignorance of the law is no excuse.

I don't know what the rest don't know, but I know that they realize that this is an international forum, and english spelling flames are stupid....

and your a ham wanna be ?

Do you not know that the whole world doesn't speak english as a first language ?

This is one reason a spelling flame in usenet is stupid.

By the way...you miss spelled receiver and their above....quote "Reciever is spelled RECEIVER and thier (does not conform) is spelled THEIR."

If you were going to use it in the example you should have written it this way "Receiver is spelled RECEIVER and their (does not conform) is spelled THEIR.

Why woould you write "thier is spelled their" then thier isn't spelled their ?

3355. Jammer Appreciation Day in hounor of W9ART

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-19 00:00:00 UTC
From: n0vfp@aol.com
Message-ID: <19981119075100.19489.00000019@ng07.aol.com>
Source record: 157642

SPECIAL ANNOUNCEMENT

The Executive Steering Committee of The Great Liberty Net has designated Saturday, November 21, 1998 as Jammer Appreciation Day to honor W9ART as Jammer of the Year.
Grand Master of Ceremonies will be K5BLB. In addition, the Net's Board of Directors has arranged a temporary stay on the quiet hours imposed on WA9KJI for this event.

A special address will be delivered by K5ZU, who promises to be home from the drug store by net time. Arkansas Bob has agreed to provide a special repeat performance of his famous "You People Make Me Sick" soliloquy. Background music will be provided by W2YEE.

This marks a conciliatory note from Bob, as he was, at first, most displeased with the outcome of the election. This change of heart was initiated by DX302MAN, who proved to Bob that the of the election was declared accurate and valid by the Chairman of the Federal Election Commission.

SWL'ers can receive QSL cards of this special event by sending a SASE to the netters and jammers of their choice. This would be a good opportunity to achieve the coveted "Heard All Jammers" and "Heard All Netters" awards.

i've had the Icom IC-2000H and it was terrible
on intermod. I now own a Icom 2100H and
it is fine although not quite as good on intermod as the Yeasu FT-2500M. But
the Icom has lots of things the Yeasu doesn't like
Tone scan, contol of all reciever functions
from the microphone, direct keypad entry on the mic, Tone decode and DTMF
encode/decode standard.
I think the Icom 2100H is a great deal.

Those amplifiers that you speak of were certified to be used within a
frequency range that included 11 meters. They were also certified to be
used on approved business or commercial bands only. There was usually a
little side node that stated "not legal for class D Citizen's band". I
think that you know that, and suspect that you are just having a little
game with semantics...;)

Then maybe the condo's legal team was not as brazen, but the threat of
legal action INCLUDING the free speech clause, was enough to get them to
back down. There were other grounds too.

>

But it DOES shed some grey in the area of "Unsightly antenna aesthetics"
issues, and one could make a case, that if a TV antenna is deemed
acceptable, then why not an equivilently sized ham antenna? Issues of
selective enforcement and other double standards rise to the top of the
sludge.

That's right, it makes about as much sense as turning loose on ham radio and
all
the public's RF-sensitive devises, hams who passed an exam for which they were
provided all the exact questions and answers, and no code test.
A sure prescription for disaster, with results that no one involved, neither the
ham nor
the busy police officer sent to sort out the problem which he has NO information
nor guidelines to go by can logically even understand, much less sort out
rationally.
What happens when a hams neighbor just calls the police when *anything*
interferes
with their TV etc, and the ham isn't involved at all, even to the point of not
knowing such
interference even exists?
Who will be the loser here? Isn't it obvious? Everybody knows about CBers and
the
proclivity of so many of them to just ignore the rules and "do whatever comes to
mind", including using very trashy amplifiers to boost their signals without
regard for the
nasty RFI problems resulting. And what of the hams who are simply recognized as
CBers by police who have little time to waste and don't know any better?

Anyone who welcomes this doesn't understand--or has an Agenda of his own.

3362. Re: Can a mobile be used as a repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-19 00:00:00 UTC
From: mjgilbert@wcom.net
Message-ID: <36542e5e.3306174@news.compuserve.com>
Source record: 157649

Sure can.
Here is the deal, you need a mobile that does 'cross-band repeat'.
This means it will listen on 2m and if it hears something it will send
it out on 440 and vice-versa (hear 440 xmit 2m). Now here is the
glitch. You MUST make sure you identify yourself every 10 minutes per
the regs. That means you must id BOTH sides of your repeater, this
is easy when you xmit in on 440, you can just say 'This is K8KDR on
the K8KDR repeater) - this identifies you and your repeater on the 2m
side, but now you will need to id the 440 side, you do this by
programming in the 2m freq and xmitting on that with your HT to get
your repeater's 440 side to xmit, of course you would only need to do
this every 10 minutes. But remember, when you xmit on the 2m input of
your repeater, you are also xmitting on the 2m output of the repeater
you are ultimately trying to talk to. Also, you will want to protect
your 440 input with a tone so that someone else who may xmit on that
freq doesn't trip your repeater. You need to make sure you put your
440 input on a freq for repeater inputs in the band plan.

There is an excellent article from Gary Coffman about this, search
deja news for it - he explains very well the difference between remote
control, remote stations, and all that stuff.

A bigger issue might be that your repeater must timeout after
3minutes, most mobiles don't do this out of the box but it is not
difficult to rig something up to fix that problem. And of course,
don't run the battery in your down - you already know you can't hit
the repeater with just your HT, if your car battery is dead - you
can't call anybody now!

I would argue that it is not that cost prohibitive to do this. You
could pick up a decent mobile used to do this for < 250 and your HT
should be < 200 (and that would be a GOOD HT).

Who said it would be more efficient? This is probably more along the lines of buying only what you need or want instead of the steady drain of tax dollars. I doubt the feds will increase funding to the FCC and if the problems will not go away you are left with the local enforcement alternative. I didn't say I liked it but I do see it as a viable alternative.

You may know radio but it is pretty clear you don't know law enforcement. :-)

The police agency would respond like it does to other technology crime.
Patrol cars would not go out unless there is the risk of injury , death or
immediate harm to property. Most likely a civilian report taker would stop
by during normal business hours to take a report which then would be
forwarded to an officer or investigator trained to deal with such
complaints. In a small town there might be a pool officer working for
several jurisdictions, a mini, limited FCC if you will. The complaints
would be resolved for the most part like they are now. Clear instructions
on making the consummer device more resistant to interference and advice on
logging the regularity and severity of the problem. The rest would go much
like a regular FCC investigation if the complaint warrants such action,
probably by hiring or using a engineer or retainer to build the case for
prosecution in collaboration with the police agency investigator.

> Burt

Anonymous people like me make it impossible to make an individual "thanks" response in all cases. Publicly posting the answer to a personal question such as this makes sense. If I see someone has already provided the answer I won't waste the time looking it up. Likewise if I see a posted "thanks" I know the question has been answered, even if privately by email. So while I'm sure the origional author appreciated your ediquette scolding, it's not always practical here.

Hello all,
I'll trade a 486 persaio 924 computer for a good working Kenwood HF rig (TS 430, 830, 530, 140, 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte hard
drive. keyboard and mouse. I'm looking for another HF rig for 160 meters. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.

More likely, it is the latest human tendency, at least in
the US, to always blame someone/something else ("it's not MY
fault -- it's his/hers/its fault") when things are not to
our liking ... IOW, not taking any responsibility for what
is our responsibility, even when that responsibility is
simply to know what is going on, or at the very least, how
to find out what is going on ...

>like mine <sarcastic grin>.=A0 And then to be told - as I was at the time=

Everyone is taking this stuff too seriously. Do any of us really think that the future of any radio service is going to be left up to municipal courts? I would be willing to bet that not even state agencies would want to or have the manpower to become the radio police. Remember, they are all too busy being trained by U.N. forces to come into our homes and take our guns away before the UFOs land. That way none of the aliens will think that we are going to hurt them and they won't get scared and fry our planet with their death star.

SB PROP @ ARL $ARLP047
ARLP047 Propagation de K7VVV

ZCZC AP47
QST de W1AW
Propagation Forecast Bulletin 47 ARLP047
From Tad Cook, K7VVV
Seattle, WA November 20, 1998
To all radio amateurs

SB PROP ARL ARLP047
ARLP047 Propagation de K7VVV

Solar activity was down this week, with average solar flux off by 30 points and sunspot numbers down by over 24 points when compared to the previous week. Average geomagnetic activity was down also, but a week ago we were hit by a major geomagnetic storm that drove the planetary A index to 60, the Boulder A index to 36, and the College A index (from Alaska) to 90 on November 13. This was caused by a major proton flare, and while it had a devastating effect on HF propagation, VHF users enjoyed some interesting conditions.

KL7SIX awoke to find what he described as a wild auroral display, and he mentioned that the one a week previous was the biggest in 10 years. VE6NM in Alberta reported hearing VE7SKA the loudest, along with some VE8 beacons on six meters.

Other than auroral propagation, the big VHF news of the week was the Leonid meteor shower. The shower did not turn out to be the hoped for meteor storm, but many hams observed both the meteors and some interesting propagation modes. N7SO was out walking his dog in Tucson early in the morning, and saw a number of nice meteor displays. K0WLU in Minnesota at one point reported working 99 grids on 2 meters, with more probably following later. LY2MW in Lithuania worked 120 SSB and CW stations on 2 meters, with 2100 km his best DX.

N0LL in Kansas reported that the meteor shower actually peaked around 0500z on November 17, about 14 hours earlier than originally forecast. His biggest thrill was working Vermont on 2 meters, which was a path over 1400 miles. He also worked VE5LY on 222 MHz. N0JK writes that the consensus for the next Leonids peak is that it should be on November 19, 1999 around 0150z.

For the ARRL Phone Sweepstakes this weekend, look for a solar flux around 110, with planetary A index on Saturday around 10 and then 5 on Sunday. After that look for flux values to rise above 120 after November 28 and peak around 145 on December 5 or 6.

Sunspot Numbers for November 12 through November 18 were 85, 97, 129, 110, 76, 92 and 72 with a mean of 94.4. 10.7 cm flux was 113.9, 118.1, 119, 131.1, 131, 120.8 and 114.8, with a mean of 121.2, and estimated planetary A indices were 4, 60, 38, 10, 7, 4 and 7, with a mean of 18.6.

AH Ha! 27.255, was a shared channel, once upon a time, with the old business band. You were allowed to run (I belive, but memory is foggy) 25 watts if you were a licensed BUSINESS band user. The other channels, common, were what is now know as channels 24, 25, 26 and 27. Lafayette used to sell radios that were type accepted to be CB and business radios. (The HB-600 comes to mind). So theroetically, if you were a licensed CBer and business user, you could legally have that amp in line, but were only allowed to use it on the designated business channels.

It might be in the "Mother page", one level up, that Don put up. I do
remember reading that he was challenging his condo association, on many
grounds (As advised by his counsel), including voilation of his right of
free speech. I don't know, if they backed down, because of this or not.

But many association restrictions ARE! If they ban an antenna, on the grounds that they "detract from the appearance of the common grounds", but are forced to allow TV antennas as part of this ruling, then they can't very well use the "aesthetic arguement anymore.

Understood, but since this creates loopholes, a clever attorney should be able to utilize them in some fashion.

Again a double standard. What you're in essence saying here, is that if I'm a "recognized minority", and every wrong done to me can be spin doctored into a case of race or gender discrimination, then I have a case? And if my "recongnized minority" neighbor, is successful in overturning a restriction, then why can't I use his precidence to elicit my own action? What about "ham discrimination"?

How can you say that there's nothing wrong with "selective enforcement"? Rules are meant to be universal, they should apply equally to everybody.

We have one individual that is using the amplifier for a AM broadcast
transmitter! That is why the city of Lafayette is passing the ordinance.
Among other reasons of course.

The practical limit of home station amplifier power may be estimated at
5 KW without significant rewiring of the home power circuits. In that
case, your ham neighbor's signal would have been less than 6dB different
than if he was running the legal power limit. It's unlikely that this
power difference would result in significant changes in RFI pickup.
Consequently, you've probably just attacked a legal hobbyist. What if
your sewing machine created interference for him while running on the
low bands? Should he conspire to destroy it?

We all tried that first. It didn't work.

> Question #1: Did you ever let the guy know that there was a problem?

Yes. He was quite unsympathetic. I offered to
schedule my watching a movie (since that was NOT a
frequent event) around his radio activities.
However, he said, "Well, I'm on from 7 p.m. until
1 a.m. during the week and most of the weekend."
Period. Wouldn't adjust. It was just too bad for
me. I wasn't the only one in the area affected by
this, but I was the worst affected as I was
physically the closest.

> Question #2: Have you ever been a guest on the Jerry Springer show?

hehehe! Nah, I wouldn't beat up on a man -
wouldn't have been a fair fight.

See also my other post about this guy. My error -
I assumed that people would understand I wouldn't
have harassed him if anything short of moving out
had worked. He was very pleasant but completely
uncooperative - not a good ambassador for fellow
hobbyists.

However, I didn't conspire to DESTROY his
equipment. I DID briefly interfere with him on
those occasions - once a week or so - when I
wanted to watch a movie on the VCR in the evening,
which was the only thing that was completely
unusable while he was transmitting. And I never
turned on that tesla coil just for fun.

I got used to my talking sewing machine (BTW, that
was my first experience of his RFI, and it scared
the crap out of me, as you might imagine). I
disconnected the VCR when I wanted to watch
regular TV - it seemed to amplify the RFI. When I
rented tapes, I watched them early Saturday
morning before he woke up, whenever possible.

I'd like to try and tell you what this situation
FELT like to me (and other close neighbors) with a
hypothetical, so perhaps you could put yourself in
my shoes. No, this is not the legal equivalent,
but play along, here, please. Imagine that there
is no noise ordinance. A well-amplified,
uncooperative reggae band moves in next door.
They're engaging in a legal activity that will
affect your quality of life and cause you to make
unforeseen adjustments in your normal daily
activities, possibly at some expense. Earmuffs?
Soundproofing? Moving out? Aggravating, huh?

Kathleen,

I do see your point, but your methods initially hit a nerve. I had assumed that your Tesla coil extension wire had been placed close enough to his antenna to damage the sensitive "front end" circuitry of his radio, and that was why he stopped operating. This is a very real possibility, since many solid-state radios have susceptable receivers (which are very expensive to repair). By the way, were the RFI voice signals coming from your TV...etc very distorted, or were they relatively clear? This would help to establish what modes of operation were causing the problem.

Curt Breneman
KC2EBP

(p.s. When I lived in an old New Haven, Ct home converted to apartments, I had downstairs neighbors who were very obnoxious concerning stereo noise late at night (severe floor thumping!). My apartment had access to the building circuit breaker box (and theirs didn't), so the problem was made to go away....)

The sewing machine "mumbled" but was obviously
voice, if that makes sense. It was loud, too.
The TV/VCR combination did this: screen had major
streaky snow, almost a white-out, and loud,
understandable voice.

I'm NOT good on distances at all, but I'd estimate
his radio was *at least* 50-75 feet - and probably
farther - from my TV.

When I turned on the tesla coil, which was inside
my house, my very close neighbor on the other side
experienced some little bit of snow and
soft-medium buzz on his TV, which was less than 30
feet from the coil (narrow house lots, but the
radio man was at the end of the cul-de-sac with a
bigger lot).

I do sincerely hope I didn't damage his equipment,
but thanks for the warning. Can I assume I didn't
damage him since he continued to transmit with no
"down time"? That never occurred to me.

BTW, would he have been emitting microwaves or
anything that could have damaged anyone else, or
himself? Please don't laugh (I'm not talking
"radio waves from space/thought control"). I
don't know much about this stuff. It's been real
educational - and probably the longest-running,

crossposted non-drug thread ever in alt.l-e <big grin>.

I regularly read that site to see if there is anything new
(there isn't, including his not-yet-posted listing of me in
the "Lawyers and Law" section which I submitted to him over 2
years ago).

From what I make of his postings, he got the association to at
least a standstill if not backed down based on threats of pure
bluff. As I indicated, the "free speech" approach is one that
the courts have not supported. The association's lawyers
probably didn't have clue one about this specialized facet of
the law and as such caved in. Had they been comm lawyers as
well, I have a feeling that the situation would have been
different. Or the association didn't want to fund the battle.
A lot of them want the quick kill or they go away.

IN any event, good for Don that he got to that point.

Of course that was three years ago. I wonder what the current
status of the matter is.

Thet sure can - the law FORCES them to ignore it for TV/video
antennas but not for ham/CB/commercial antennas. Of course, I
feel that the aesthetic argument is a stupid one, but it's
rasied all the time.

> > The FCC has been reluctant to impose any more antenna

There is no loophole. The "can" and "can't" situation is
clear. You are right, though, there are attorneys who will try
to create loopholes for their use, but they are not the
knowledgeable communications attorneys who see the big picture.

> > Unless one can show an improper personal agenda or so-called

> Again a double standard. What you're in essence saying here, is
> that if I'm a "recognized minority", and every wrong done to me can
> be spin doctored into a case of race or gender discrimination, then
> I have a case?

You missed the point. IF you are "selected" for enforcement
BECAUSE of some improper factor not related to the proscribed
behavior, you can claim "improper sselective enforcement".

Example: Five cars are speeding. Your red sports car is pulled
over. No selective enforcement - driving a red car makes you
unlucky but not "discriominated against". If all cars are
plain cars and the Black driver is pulled over, a case of
"selective enforcement" may be made IF he can show that he was
pulled over for being Black, not because he was speeding.

> And if my "recongnized minority" neighbor, is successful
> in overturning a restriction, then why can't I use his precidence
> to elicit my own action?

You can raise the issue. Whether a court would accept is is
open to speculation.

> What about "ham discrimination"?

Been goinmg on for decades. We hams have gotta get past that
point.

> > How can you say that there's nothing wrong with "selective enforcement"?

We discuss this for hours in law enforcment managment training.
In the raw sense, "selective enforcement" per se, where one
person gets nailed for doing something and another person does
not, has many facets - "setting an example", "the luck of the
draw", limited resources, permissible exercise of discretion on
the part of the department...as long as it doesn;t involve
"statutory discrimination", it's hard to build a case on it.

The old saw "if you can't do the time don't do the crime"
applies.

> Rules are meant to be universal, they should apply equally to everybody.

They do. But just as in Don's case, sometimes you have to have
a good bluff to get them to be applied the way YOU want them to.

Sorry, but the analogy you give is wrong.

A more correct analogy would be that your neighborhood has a common bundle of telephone circuits running through it. Instead of one monopoly telephone company, everyone hooks up their own phone to the common wires or hires someone to do it for them.

Your "problem" neighbor is properly wired into the telephone circuits.

You paid some incompetent, cutrate, installer to hook up your telephone. The installer did a poor job of installing your telephone and crossed your neighbor's wires with your wires such that when your "problem" neighbor uses his telephone, your poorly designed and installed telephone system malfunctions.

You ask your neighbor not to use his telephone because it interferes with your poorly designed equipment. He is not willing to give up his telephone because of your malfunctioning equipment.

He tells you that you should fix your telephone installation. Your installer is unwilling to fix the problems. You are unwilling to pay for a proper installation or unable to find a competent installer.

You decide that the proper thing for you to do is to hook up a tesla coil to your neighbor's telephone wires so that it jams his equipment and keeps him from using his telephone.

This assumes that the interference comes from someone using his legally allocated frequencies and power levels. If he's running equipment that is putting out signals on the wrong frequency or illegal power levels, change the faulty wiring job to his end.

The loud band analogy is different. Anyone with properly working hearing will hear the band. It's not a case where only those people with cheap or defective hearing hear the band. There is no selectivity where "properly working" ears don't hear the band and only "improperly working" ears hear the band.

I do understand your frustration. but if the radio operator is operating properly, the fault lies in your defective equipment, not on his end.

I often find that I am unable to listen to some radio signals I would like to listen to because of nearby properly operating, licensed radio transmitters such as TV stations, pager transmitters, etc. and the limitations of the radios I am using. I don't feel that these legal radio users should be forced off the air because of the limitations of my equipment.

I haven't considered going out and sabotaging their equipment just so I
can listen to some weak signal with the equipment I have.

>decades, all to no avail.

Actually, the FCC has the statutory authority to *require* consumer electronics manufacturers to meet RFI susceptibility standards, no begging required. But the FCC has *refused* to exercise that authority by refusing to set mandatory RFI susceptibility standards for consumer electronics. If they did, they'd have to *enforce* compliance, but the FCC has been RIFing the engineers who are qualified to enforce compliance so that they can hire more lawyers (Beltway Bandits) to run spectrum auctions.

They have called for voluntary compliance, knowing full well that most manufacturers won't voluntarily comply because it would put them at a small cost disadvantage to those manufacturers who choose not to comply. A few cents a unit over a multi-million unit run adds up to real money, and no consumer equipment manufacturer is going to eat that unless it is mandatory.

The FCC would rather that amateurs, CBers, and broadcasters unfairly take the heat for RFI problems rather than for the FCC to take the political heat for driving up the cost of consumer electronics by even a tiny bit. That would have an adverse effect on sales, and the EIA lobby would flex their muscles, and some FCC bureaucrats would have to look for real jobs.

Kathleen,

There is a health risk with high power RF fields which increases with power and frequency. Unless his radio station is very poorly designed, it probably does not post a risk to its operator. On the other hand, if he is running high power, he is required by the FCC to perform a survey of RF fields around any radiating elements (read : antenna). There are pre-defined limits for "uncontrolled" exposures (like you and your house). If his antenna is too close to your property so that unsafe RF fields exist, then you have grounds for action. Tables have been set up to aid in this determination. For high-power on the highest HF band (10m), uncontrolled RF exposure limits say that his radiating elements cannot be closer than some tens of feet from your property. Exact numbers can be determined based upon the tables.

Understandable voice signals coming through your appliances means that he is operating AM, not SSB like most modern amateurs on the HF bands. If that is the case, there is a good possibility that he is operating high-power CB, and not Ham gear. SSB signals sound like badly distorted audio.

>There are several other issues here, besides just capability. For example,
>crossbanding is really a form of remote base operation.

No, it is a form of *repeater* operation. Both frequencies have to be in
the repeater segments of the bands in which they are used, of course.
Repeaters may operate under *automatic* control, so you don't need a
separate control link (unless you're doing third party traffic, IE a phone
patch). So you *can* work into a 440 repeater using a 2m HT via a
crossband repeater as long as all the frequencies involved are
authorized for repeater operation (part of 2m isn't). One of the bands
could even be 6m or 10m as long as you stay in the repeater segments
of those bands.

Now if you want to operate outside the repeater band segments, then you
have to operate under the remote control rules (colloquially called remote
base operation, though that term isn't used in Part 97). Any amateur station
can be operated by remote control. You can use wireline control or radio
control. If you use radio control, then the control link falls under the rules
for auxiliary operation, and the auxiliary link frequencies must be above
222 MHz.

You can't operate a remotely controlled station under automatic control,
IE the remotely controlled transmitter can't come on unless you command
its PTT via your control link. Only repeaters and automatic data relay stations
can operate under automatic control.

This is different from what we normally mean by crossbanding, where
the crossband repeater *does* control its own PTT automatically via COR.
That means it *must* operate either under the repeater rules or under the
automatic data relay station rules. Since it isn't the latter, it must be the
former. And indeed that's exactly what it is, a repeater operating under
repeater rules. Repeaters may operate anywhere repeater operation is
permitted.

Welcome to the hobby. I hope you enjoy it.

While I haven't used one, I have heard good things about the ADI AT-600HP, and am considering getting one myself. The company currently has a $30 instant rebate program so you should be able to pick one up for about $270. Once nice thing is that comes with some frequencies pre-programmed so you can turn it on and start using it right out of the box. It sounds like it will do most things one would expect an HT to do.

As a first (and presumably only - at least for a while) radio, I would stay away from the smaller and lower power HTs. They work well, but because of their limited power, their range is limited.

SB QST ARL ARLB100
ARLB100 ARRL elections

The ARRL Committee of Tellers for the election of directors and vice directors met at ARRL Headquarters November 20 to count ballots. Here are the results. In each case, the candidate receiving the greatest number of votes was declared elected. Terms begin at noon on January 1, 1999.

Central Division, for a two-year term as director:

Edmond A. Metzger, W9PRN 1846
Henry B. Ruh, KB9FO 1468
R. David Klatzco Jr, N9TQA 1297

Metzger was declared elected.

Central Division, for a two-year term as vice director:

Howard S. Huntington, K9KM 2748
Mike Hoshiko, W9CJW 1849

Huntington was declared elected.

New England Division, for a two-year term as vice director:

Michael Raisbeck, K1TWF 2469
Andrea T. Parker, K1WLX 1463

Raisbeck was declared elected.

Northwestern Division, for a two-year term as vice director:

Greg Milnes, W7AGQ 2930
Mary E. Lewis, W7QGP 1609

Milnes was declared elected.

Rocky Mountain Division, for a three-year term as vice director:

Marshall Quiat, AG0X 1391
Marvin C. Zitting, W7MR 816

Quiat was declared elected.

West Gulf Division, for a three-year term as director:

Jim Haynie, W5JBP 2113
Lawrence S. Higgins, W5UQ 1602

Haynie was declared elected.

West Gulf Division, for a three-year term as vice director:

Coy C. Day, N5OK 2330
Barney J. Boone, KJ5AE 1346

Day was declared elected.

Oh? You don't have civilian report takers? You don't have joint/cooperative efforts between police agencies? You don't have detectives? Do you have radios in your cars yet?

> Police DON'T want any part of this--there's nothing in it but grief and wasted time,
>
> and they know it.
> Sorta like dealing with domestic disputes, without the "family" element.

I didn't say anyone wanted anything to do with it. I offered a sample scenario of enforcement that is consistent with other technology crime investigation. I didn't say it was the only way of approaching the problem if your agency were tasked with RF enforcement. Not all requests for service go first through patrol. Some crimes are sent directly to detectives. It doesn't make much sense, IMHO, to sent a patrol unit if the suspect is not present, there is no physical danger involved and based on the nature of the alleged crime. How it is handled is established as policy by your department (or in law). I guess there are some backwater areas that don't have this problem. Not much need for policy when there is just Andy and Barney.

> BTW -- I worked law enforcement communications for the state for 30 years.

Good for you. Does that mean you were a cop or what?

You hit one of my favorite soapboxes, Gary.

Actually, the field bureau folks, the folks who would have had to do the enforcement, would have loved to have had a set of enforceable standards as a replacement for the "hitting one's head against a stone wall" situation of trying to make an upset and angry public accept that the FCC couldn't do anything about the cheap consumer home electronic entertainment junk being sold on the market.

The real answer to why the FCC has not exercised its PL 95-259 authority is even more sinister. It was well known that if the Commish' tried to set mandatory standards the manufacturer industry was well prepared and resourced to tie the issue up in litigation for several decades, the same way that they stonewalled granting the authority in the first place for almost 20 years.

> but the FCC has been RIFing
> the engineers who are qualified to enforce compliance so that
> they can hire more lawyers (Beltway Bandits) to run spectrum
> auctions.

As far as the Commish' hiring, that was on Der Hundt's watch, over two years ago. Bill Kennard is a whole different guy with a pro-enforcement attitude, but bureaucratic amputations heal very slowly. He has come out with a pronouncement that all enforcement efforts will be consolidated in a single Bureau.

Actually, AFAIK none of the RIFees were engineers. Most were either monitoring techs or "public service assistants" who couldn't be or didn't want to be retrained as "street cops" (enforcement agents). Those of us engineers who left did so voluntarily on regular retirement or early retirement (which in my case was only six months before I would have voluntarily retired anyhow).

I'll wait and see what is going to happen on that score.

> They have called for voluntary compliance, knowing full well
> that most manufacturers won't voluntarily comply because it
> would put them at a small cost disadvantage to those
> manufacturers who choose not to comply. A few cents a unit over
> a multi-million unit run adds up to real money, and no consumer
> equipment manufacturer is going to eat that unless it is
> mandatory.

I spent some time on a committee that was working with the
telephone industry to set a VOLUNTARY standard, and the result
still came out looking like a camel, the horse designed by a
committee. That voluntary standard is more of a suggestion
which the $7.95-a-set folks are free to ignore.

But there is a ray of hope on the horizon....the Europeans
don't have an Administrative Procedures Act to deal with, so
they set some rather tough mandatory RFI resistance standards
by the stroke of a pen, take it or leave it, meinen herren....

The quality manufacturers will do a single design which will be
pretty much bullet-proof and sell it in Wurope and in the US.
The $7.95-a-set crowd will ignore the European market and still
dump their junk here.

> The FCC would rather that amateurs, CBers, and broadcasters
> unfairly take the heat for RFI problems rather than for the FCC
> to take the political heat for driving up the cost of consumer
> electronics by even a tiny bit.

Even if the FCC could set mandatory standards today, the dust
wouldn't be settled on the litigation during your professional
lifetime, let alone mine. THAT's something that the EIA is
good at.

> That would have an adverse
> effect on sales, and the EIA lobby would flex their muscles, and
> some FCC bureaucrats would have to look for real jobs.

Tell that to Dale Hatfield, the new OET Chief....I dare you!

Beagle,

Maybe you can find an old "Heathkit". They had a 60KHz clock. Check
the WWV web site the detailed explaination of how it works. A
continuous data stream is broadcast with the time (date included). The
"Heathkit" just fed the demodulated data to logic which in turn drive
LEDs.
No tick-tock involved. I have listened to the signal on my R-71 and you
can hear the data shift. It is slow enough that you can damn near decode
it with a pencil and paper.

Dick

EDITOR'S NOTE: Because of the Thanksgiving
holiday, we're issuing combined editions
of both The ARRL Letter and ARRL Audio News.
The next editions will be distributed
December 4, 1998. Late-breaking news will
be available via The ARRLWeb Extra
or W1AW bulletins. ARRL Headquarters will be
closed Thanksgiving Day, Thursday, November 26,
and Friday, November 27. We wish you and yours
a safe and enjoyable holiday!--Rick Lindquist, N1RL

----------------------------------

IN THIS EDITION:

* +Ballots counted in ARRL Board races
* +FCC sets aside four Extra class grants
* +FBI arrests Georgia ham in interference case
* +Leonids provide thrills galore
* +Next SAREX mission delayed
* SATERN ends emergency operation
* AWA to commemorate first transatlantic QSO
* FCC sequential call sign update
* A Thanksgiving Poem
* Solar update
* IN BRIEF: This weekend on the radio;
* Vanity update; New satellite book;
* They're baaack! US-made 3-500Z and 4-400A/C
* tubes; AMSAT-NA promotions; First-day covers;
* ECFS replaces RIPS; AMSAT 16th Space
* Symposium Proceedings; ZS57SIG special event

+Available on ARRL Audio News

```

BALLOTS COUNTED IN ARRL BOARD RACES

Two incumbent ARRL directors and three incumbent vice directors were among the successful candidates for contested seats on the ARRL Board. In addition, two new vice directors were elected as ballots were tallied November 20 at League Headquarters by the ARRL Committee of Tellers.

Retaining their ARRL Board seats were Central Division Director Edmond A. Metzger, W9PRN, and West Gulf Division Director Jim Haynie, W5JBP.

Metzger tallied 1846 votes to outpoll two other candidates--Henry B. Ruh, KB9FO, who got 1468 votes and Richard David Klatzco Jr, N9TQA, who got 1297 votes. Incumbent Central Division vice director Howard S. Huntington, K9KM, beat back a challenge from Mike Hoshiko, W9CJW, by a vote of 2748 to 1849. Metzger and Huntington will serve two-year terms.

By a 2113 to 1602 vote, Haynie successfully overcame a challenge from Lawrence S. Higgins, W5UQ, but the West Gulf Division will have a new vice director. Oklahoma Section Manager Coy C. Day, N5OK, defeated incumbent vice director Barney J. Boone, KJ5AE, 2330 to 1346. Haynie and Day will serve three-year terms.

In the Rocky Mountain Division, current Director Marshall Quiat, AG0X, outpolled Marvin C. Zitting, W7MR, for vice director, 1391 to 816. Quiat effectively swapped places with current Vice Director Walt Stinson, W0CP, who ran unopposed for the Director's slot. Stinson and Quiat will serve three-year terms.

Incumbent vice directors also won their races in the New England and Northwestern divisions. In the New England Division, Michael Raisbeck, K1TWF, defeated Andrea T. Parker, K1WLX, for a two-year term by a vote of 2469 to 1463. In the Northwestern Division, Greg Milnes, W7AGQ, defeated Mary E. Lewis, W7QGP, for a two-year term by a vote of 2930 to 1609.

Several other candidates for director and vice director faced no opposition, and the Election Committee earlier declared them elected:

* In the Hudson Division, reelected for two-year terms: Director Frank Fallon, N2FF, of East Williston, New York, and Vice Director J. P. Kleinhaus, W2XX, of Cortlandt Manor, New York.

* In the New England Division, reelected for a two-year term: Director Tom Frenaye, K1KI, of West Suffield, Connecticut.

* In the Northwestern Division, reelected for a two-year term: Director Mary Lou Brown, NM7N, of Anacortes, Washington.

* In the Roanoke Division, reelected for two-year terms: Director John Kanode, N4MM, of Boyce, Virginia, and Vice Director Dennis Bodson, W4PWF, of Arlington, Virginia.

* In the Southwestern Division, reelected for three-year terms: Director Fried Heyn, WA6WZO, and Vice Director Art Goddard, W6XD, both of Costa Mesa, California.

Terms of office for successful candidates begin at noon on January 1, 1999.

FCC SETS ASIDE FOUR EXTRA CLASS GRANTS

The FCC has notified four individuals that it is setting aside their recent Extra Class license grants and privileges while it investigates alleged irregularities in the volunteer examination process. Letters from the FCC went out November 10 to Elmer J. Smith, N3UNR, of Effort, Pennsylvania; Philip DiGenova, N3UNS, of Bartonsville, Pennsylvania; Wayne S. Bowden, AA3RT, of Millsboro, Delaware; and Kenneth L. Sharp, AA3RU, of Boyertown, Pennsylvania, that the Commission was setting aside their Extra Class grants. All four individuals were requested to return their Extra Class license documents and Certificates of Successful Completion of Examination (CSCEs) to the FCC's Gettysburg office.

"This letter is not a finding that you have engaged in misconduct," the letter said, adding that if the FCC's investigation concludes that it should grant the Extra Class license applications, it will reinstate the grants.

An FCC official said the investigation was looking into testing irregularities including allegations that examinees might have been coached or given test answers. "They are bumped back for now while we investigate, since we had enough evidence at the outset to do that," he said.

For the time being at least, Smith and DiGenova have been bumped back to Technician class licensees, while Sharp will revert to Advanced class and his former N3TPN call sign. All three took their examinations October 6 at a W5YI-VEC session in Warminster, Pennsylvania. Bowden apparently never held a ham ticket prior to taking the examination elements for Extra Class at Spring City, Pennsylvania, on October 4 during a W5YI-VEC testing session. The call sign AA3RT no longer appears in the FCC database. The records of the other three amateurs involved were modified November 10.

FBI ARRESTS GEORGIA HAM FOR INTERFERING WITH AIRCRAFT COMMUNICATION

The FCC, the FAA, and the FBI have announced the arrest of a Georgia ham for allegedly interfering with radio communication between aircraft and air traffic controllers in Northern Georgia. An FBI statement issued this week said that Kevin M. Kelly, N2BYE, an Advanced class licensee, was arrested without incident November 6 at his Cumming, Georgia, home by FBI agents accompanied by FAA and FCC agents. The arrest followed a search of Kelly's residence.

Kelly was charged in a criminal complaint with four counts of breaking federal law prohibiting knowingly interfering with the operation of a "true light" or signal used at an air navigation facility. The FBI said its case stemmed from FAA reports of "sporadic and momentary radio frequency interference" between aircraft and air traffic controller communications. The FBI said an extensive investigation showed the RF interference to be coming from the Hyde Park Subdivision in Cumming

where Kelly lived.

The FBI described Kelly, 46, as "a highly experienced electronics engineer" who was said to have been "extremely upset" about air traffic noise above his home. Kelly was scheduled to appear November 9 before a US magistrate in Atlanta.

STORM OR SHOWER, LEONIDS PROVIDE THRILL OF A LIFETIME

Hours of lost sleep were a small sacrifice to the many VHF and UHF enthusiasts who got the thrill of a lifetime working meteor scatter during the Leonid shower November 16-18. "For nearly all radio operators, it was spectacular," enthused Shelby Ennis, W8WN, of Elizabethtown, Kentucky. "This was the year of the fireballs."

Leonids get their name from the constellation Leo, which appears to be their source in the sky. The meteors originate from debris and dust in the wake of the comet Tempel-Tuttle, showing up each November. Approximately every 33 years--the length of time it takes for Tempel-Tuttle to orbit the sun--the shower can reach storm proportions.

Ennis and others also seem to agree that this was the year for long-distance contacts, possibly a few record-setting ones. "My biggest thrill was working Vermont on 2 meters, which is over 1400 miles," said Larry Lambert, N0LL, who lives in northern Kansas. He said he encountered one "burn"--or trail--that lasted nine minutes, during which he was able to work 11 stations.

Most, if not all, agree that the Leonids showed up a bit earlier than predicted, and that this year's event was a shower, not a storm. Some predicted that next year will be "the big one" that some had thought might happen this time around. Even so, all reports indicate gratifying results for those who participated. "I came home from work between 1800 and 1900 UTC on the 16th, and things were wild," Lambert said. His skeds at the predicted peak of 1900 UTC on the 17th failed for the most part, he said.

While high-speed CW has been the preferred mode for meteor scatter contacts, Ennis said that as a result of the numerous long-burning fireballs this time, SSB turned out to be "much more effective than HSCW." Ennis said HSCW worked best for times prior to the shower's peak, but SSB was "far more effective" once long bursts begin to appear.

Some stations were able to put several new grid squares, states and even countries into their logbooks, thanks to the Leonids. During the two days he operated, Bill Mitchell, K0WLU, in Minnesota, logged 124 stations in 99 grid squares on 2 meters, using both SSB and CW and running just 90 W into a Cushcraft 17B2 antenna. Not only that but he operated for several hours on emergency power after he lost electricity at his house. He used a marine battery to power his rig and amp, and an inverter to run his rotator!

Arliss Thompson, W7XU, in South Dakota, reported "exceptionally good" conditions on the morning of November 16. "I hope I'm around in another 33 years!" he said. Thompson worked several new grids and states on the bands from 50 MHz to 432 MHz, including his first-ever 432 meteor-scatter QSO with N6RMJ in California--possibly a record at 2036 km (for his part, N6RMJ reported dozens of MS contacts on 6 meters through 70 cm). The 144.200 MHz gathering spot on 2 meters had "so many signals that we couldn't copy anyone," Thompson said, expressing appreciation to those who moved off the calling channel to clear the congestion.

For those whose visibility was not obscured, the view from the ground also was spectacular in some US locations, although the peak viewing was in Asia. Ron Dunbar, W0PN/3, in Maryland, stepped outside to check the sky early on the morning of November 17. "Only five seconds after I stepped onto the deck, a brilliant Leonid streaked by from due east to due west," he said. "As it arched down to the western horizon, it exploded!" Dunbar said the resulting light was so intense it lit up his backyard.

Dunbar concluded that this year's Leonids shower was "definitely not normal, to say the least" because of an apparently greater numbers of larger particles generating more impressive burns. "Every trail I saw during the 15 minutes I was out there was most likely created by pieces of cometary debris of a size between a marble and a chicken's egg," Dunbar said in a posting to the Meteor-Scatter reflector, "and the fireball had to be considerably larger."

An ATV-carrying balloon launched by NASA scientists at the Marshall Space Flight Center in Huntsville offered live, real-time viewing of the Leonids shower via the Internet (see http://www.leonidslive.com/). At last report, the balloon was being retrieved from North-Central Georgia.

The Russian Mir space station and apparently all communication satellites came through the Leonid shower unscathed. The two cosmonauts aboard Mir took temporary refuge in the Soyuz escape spacecraft during the peak of the meteor shower. During an earlier spacewalk, they had installed a meteorite trap to possibly catch some of the debris.

NEXT SAREX MISSION, STS-93, DELAYED

The only Space Amateur Radio EXperiment, or SAREX, shuttle mission scheduled for 1999 has been postponed at least until March. Mission STS-93 aboard the space shuttle Columbia had been tentatively scheduled for a January launch. The postponement was blamed on delays in shipping the primary payload. A new launch date from Kennedy Space Center is not yet known, but NASA has said it will not be before March 18. The mission will last four days.

Schools in Florida, Rhode Island, Texas, and Virginia now are on the roster to make Amateur Radio contact with the STS-93 astronauts. A school in Indiana that was on the original SAREX schedule had to drop off because of the change in the launch date.

Hams flying aboard STS-93 will be Commander Eileen Collins, KD5EDS, as well as Michel Tognini, KD5EJZ, and Catherine Coleman, KC5ZTH. Other crew members are Jeffrey Ashby and Steven Hawley.

If all goes as planned, students at each of the schools on the schedule will get a chance to directly interview the astronauts via a ham radio linkup. Typical passes last approximately 10 minutes. Specific times and dates of the school contacts have not yet been arranged.

The SAREX program is a cooperative venture of NASA, AMSAT, and the ARRL. For more information on the SAREX program, contact Jean Wolfgang, WB3IOS, e-mail jwolfgang@arrl.org.

SATERN ENDS EMERGENCY OPERATION

After 19 days in emergency mode, SATERN--the Salvation Army Team Emergency Radio Network--discontinued its daylong operation on 14.265 MHz on November 16. The net had operated the all-day sessions since late October to support the Hurricane Mitch flood relief effort in Central America.

SATERN Director and Salvation Army Maj Pat McPherson, WW9E, says the net has gone back to its once-daily nets (1500 UTC weekdays; 1530 UTC Saturdays) on the same frequency. "Any traffic from the affected area will be accepted then," he said. "If the need presents itself, we will go back to the emergency format of the daylong net."

Many stations in the US have been participating in the net to relay health and welfare traffic to and from relatives, to aid in assessing damage and the emergency needs of victims, and to assist other relief agencies in the region. Ham radio continues to be one of the primary means of communication in Honduras.

McPherson said SATERN handled more than 500 pieces of health-and-welfare traffic in the days immediately following the disaster activation, plus an untold amount of emergency, logistical and strategic traffic. "The value of Amateur Radio's use during disasters has again been demonstrated," McPherson said.

The FCC had accommodated the SATERN operation by declaring a communications emergency on 14.265 MHz. The emergency declaration was rescinded November 17 after the net returned to its regular schedule.

SATERN continues to accept health and welfare inquiries via its Web site, http://www.angelfire.com/il/satern411/satframe.html. The Salvation Army is calling Mitch "the worst Atlantic hurricane in two centuries." The death toll has risen above 10,000 people. Damage to the region has been estimated at $4 billion.

AWA TO CELEBRATE FIRST TRANSATLANTIC QSO ON THE AIR

Just two years ago we celebrated the 75th anniversary of the first one-way transmission across the Atlantic ocean with the 1BCG operating event. Now, it's time to celebrate the 75th anniversary of the first amateur transatlantic two-way communication. It was not until the fourth

and final transatlantic tests in November 1923 that ARRL Traffic Manager Fred Schnell, 1MO, and--a little later--John Reinartz, 1XAM, (both then living in Connecticut and later W4CF and K6BJ, respectively) would work Leon Deloy, 8AB, in France.

Now, exactly 75 years later to the day, the Antique Wireless Association plans to work other amateurs using early-style apparatus to commemorate this momentous occasion. The transmitter will be a replica of the original 1MO transmitter (four 203A tubes in a shunt-fed Hartley circuit). The receiver will be an authentic period-design Reinartz receiver of the type used at 1XAM. On Friday, November 27, 1998--the day after Thanksgiving--W2AN will operate from the AWA annex on or about 3525 kHz (the original transatlantic QSO took place around 3 MHz), starting at 2300 UTC. Operators will work as many stations as possible. The commemorative operation will resume November 28, if there's enough demand for contacts. A special QSL card will be available.

Send QSLs for W2AN commemorative contacts to AWA, 187 Lighthouse Rd, Hilton, NY 14468. For more information, contact AWA Museum Curator Ed Gable, K2MP, 716-392-3088; k2mp@eznet.net. Visit the AWA Web site at http://www.ggw.org/awa.--thanks to Ed Gable, K2MP, and Bob Raide, W2ZM

Hams North of the Border also will celebrate a transatlantic first this year, specifically, the 75th anniversary of the first recorded transatlantic QSO between A.W. Grieg, c1BQ of Halifax, Nova Scotia, and E.J. Simmonds, g2OD, of Ascot, Berkshire, England. This contact took place on December 16, 1923, a few weeks after the US achievement.

To commemorate this uniquely Canadian event, Industry Canada will permit Canadian Amateurs the use of the following special prefixes during the month of December 1998: CF in place of VA; CG in place of VE; CJ in place of VO; CK in place of VY--thanks to Eddy Swynar, VE3CUI

FCC SEQUENTIAL CALL SIGN UPDATE (View with nonproportional font)

The following is a list of FCC sequentially assigned call signs issued as of November 4, 1998. For more information about the sequential call sign system, see Fact Sheet PR5000 #206S or contact the FCC, 1270 Fairfield Rd, Gettysburg, PA 17325-7245; e-mail fccitd@fcc.gov.

A THANKSGIVING POEM

Many Thanks

By Kim Paquette, N8YWX

I'm thankful for our net controls,
They run the net on time.
I'm thankful for the treasurer,
He watches every dime!

I'm thankful for the new club call,
For Field Day, it's just great!
I'm thankful for the Christmas Dinner,
And I can hardly wait.

I'm thankful for our Secretary,
She's a woman of many words.
I'm thankful for all the 73s,
That I have ever heard.

I'm thankful for second Tuesdays,
When all the hams do gather
I'm thankful for ol' Mickey D's
Where many gather after.

I'm sure thankful for good ol' PL,
It keeps DX away.
I'm thankful for the autopatch,
Some are thankful every day!

I'm thankful for the WB*
He keeps QRM low.
I'm thankful for the hams,
We meet wherever we go.

I'm thankful for my radio,
And I always have it with me.
And though I've never used it,
I'm even thankful for RTTY.

*A cryptic reference to her husband, Jerry, WB8IOW--Ed

[Republished with permission from the DeForest ARC News, October 1998]

SOLAR UPDATE

Propagation prognosticator Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was down this week, with average solar flux off by 30 points and sunspot numbers down by over 24 points when compared to the previous week. Average geomagnetic activity was down also, but a week ago we were hit by a major geomagnetic storm that drove the planetary A index to 60, the Boulder A index to 36, and the College A index (from Alaska) to 90 on November 13. This was caused by a major proton flare, and while it had a devastating effect on HF propagation, VHF users enjoyed some interesting conditions.

KL7SIX awoke to find what he described as a wild auroral display, and he mentioned that the one a week previous was the biggest in 10 years. VE6NM in Alberta reported hearing VE7SKA the loudest, along with some VE8 beacons on 6 meters.

Other than auroral propagation, the big VHF news of the week was the Leonid meteor shower. The shower did not turn out to be the hoped for meteor storm, but many hams observed both the meteors and some interesting propagation modes.

For the ARRL November Sweepstakes (SSB) this weekend, look for a solar flux around 110, with planetary A index on Saturday around 10 and then 5 on Sunday. After that look for flux values to rise above 120 after November 28 and peak around 145 on December 5 or 6 (the weekend of the ARRL 160-Meter Contest).

Sunspot numbers for November 12 through November 18 were 85, 97, 129, 110, 76, 92, and 72, with a mean of 94.4. The 10.7-cm flux was 113.9, 118.1, 119, 131.1, 131, 120.8, and 114.8, with a mean of 121.2. The estimated planetary A indices were 4, 60, 38, 10, 7, 4 and 7, with a mean of 18.6.

IN BRIEF:

* This weekend on the radio: November 21-22, ARRL November Sweepstakes, SSB (see October QST, page 118); North American Collegiate ARC Championship, SSB; IARU Region 1 160-Meter Contest. November 28-29, CQ WW DX Contest, CW (see October QST, page 108). Just ahead: December 4-6, ARRL 160-Meter Contest (see November QST, page 109); QRP ARCI Holiday Spirits Homebrew Sprint; TOPS Activity 3.5 MHz CW Contest (see December QST, page 95).

* Vanity update: The FCC in Gettysburg reports it has processed vanity call sign applications received through October. In the latest run November 18, the FCC granted 152 new call signs. Another 183 applications landed in the work in process (WIPs) stack and have been processed.

* New satellite book: Long time AMSAT-NA Journal author, John Hackett, LA2QAA, has a new book entitled A Beginner's Guide to Amateur Radio

Satellites. It's available through coauthor A. I. Copland, GM1SXX. For details contact LA2QAA by e-mail at la2qaa@amsat.org.--AMSAT News Service

* They're baaack! US-made 3-500Z and 4-400A/C tubes: Triton Services of Easton, Pennsylvania--which acquired the EIMAC Glass Tube Division (and the original equipment and technology) a couple of years ago--now is producing 3-500Z and 4-400A/C tubes to the original EIMAC specs. These are available exclusively through D&C Electronics, 3089 Deltona Blvd, Spring Hill, FL 34606; tel 800-881-2374; 352-688-2374; fax 352-683-9595; e-mail tube@gate.net; http://www.dandcelectronics.com. (D&C also can supply 811A, 572B and other tubes, made in China and Russia.)

* AMSAT-NA promotions: As we've already reported, Keith Baker, KB1SF, has been named to replace Bill Tynan, W3XO, as the president of AMSAT-NA. The Board also named Robin Haighton, VE3FRH, to replace Baker as executive vice president; Stan Wood, WA4NFY as vice president-engineering; Keith Pugh, W5IU, as vice-president-operations; Martha Saragovitz as corporate secretary; and Art Feller, W4ART, as treasurer. In addition, the Board appointed Russ Tillman, K5NRK, publisher of the AMSAT-NA Journal, as vice president-publications, and Dan James, NN0DJ, as vice president-public affairs. The selections were made at the AMSAT-NA annual Board of Directors meeting October 25 in Vicksburg, Mississippi.--AMSAT News Service

* First day covers: If you're interested in Amateur Radio stamps, check out the Web page of Gary G. Flechtner Sr, WJ8C, at http://www.bright.net/~wj8c/. Gary's interested in additional color photos of first-day covers. Send pictures in .jpg or .gif format via e-mail to wj8c@bright.net or hard-copy photos to Gary G. Flechtner Sr, 188 N State Rte 101, Tiffin, OH 44883-9656.

* ECFS replaces RIPS: As of October 26, the FCC's Electronic Comment Filing System (ECFS) has replaced the Record Imaging Processing System (RIPS) as the main source for copies of documents filed in docketed and rulemaking proceedings. The public can view all ECFS documents at http://www.fcc.gov/e-file/ecfs.html. The public also can file comments electronically in unrestricted rulemaking and docketed proceedings. The ECFS is designed for use with Netscape ver 3 or higher or Internet Explorer ver 3 or higher. The FCC plans to add an FAQ page to ECFS to make the system more user-friendly. For more information about using this system, contact Patricia Rawlings, prawling@fcc.gov; 202-418-0294. For more information about filing comments, contact Magalie Salas, msalas@fcc.gov or Bill Caton, wcaton@fcc.gov, 202-418-0300.

* AMSAT 16th Space Symposium Proceedings: The Proceedings of the AMSAT-NA 16th Space Symposium October 16-18, 1998, in Vicksburg, Mississippi, are available from the ARRL. Order item 7024. Proceedings are $15. Call toll-free 888-277-5289 or visit ARRLWeb, http://www.arrl.org.

* ZS75SIG special event: Special event station ZS75SIG continues through November 30 to celebrate the 75th anniversary of the South African Corps Of Signals. Look for operation on 80, 40, 20, 15, and 10 meters SSB and occasionally on CW. A special QSL card will be available only to those who QSL direct (no QSLs via the bureau). Enclose $1 or two IRCs for postage to Edwin Musto, ZS5BBO, PO Box 211032 Bluff, 4036, South Africa.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

REDCLIFFE AND DISTRICTS RADIO CLUB
EMAIL & PACKET NEWSLETTER
URL http://www.qsl.net/vk4iz/
NUMBER: 008 DATE: NOVEMBER 17, 1998
----------------------------------------------------------------
Compiled and Sent by Kevin Jones - VK4AKI
email - kevjon@bit.net.au
packet - vk4aki@vk4itm.#bne.qld.aus.oc
----------------------------------------------------------------

This is a now a weekly newsletter to promote the Redcliffe Radio
Club and to keep members informed about what is happening in the
Club. Contributions are most welcome on any subject you feel will
be of interest to the readers. If you have read this newsletter
on someone else's email or packet and would like to be placed on
the mailing list please contact me at the above address. Note,
this newsletter does not replace the Club Magazine "QRM" but some
of the material will be contained in both publications.

Kevin Jones VK4AKI - Editor
----------------------------------------------------------------

November 17,

Last night saw the foundation being laid for the antenna mast that
is being installed at the new club house. The mast will be installed
as soon as we can arrange transport from its storage at VK4AKI's
Scarborough address to the club house. Anybody got a truck, or a
ute with a substantial roof rack, who could help us with the job?

---------------------------------

Gary's team was successful in turning a pile of old computers
into the start of a packet station. All we need now is a modem
and an antenna and we'll be on air.

_____________________________________________.

The WIAQ VK4 QSL Bureau is also up and running at the new
club house with the first lot of cards being sorted out las night.

We will be looking at computerising the whole thing. Iï¿½m sure
we have enough electromechanical and computer expertise to
develop the project.

---------------------------------------
```

NOVEMBER 16

HELLO KEVIN - JUST A BIT OF NEWS ABOUT MYSELF..I CAN NOW USE
MY RIGHT ARM FOR A LOT OF THINGS..ALSO I CAN TYPE...BUT MY
EYES HAVE GONE A BIT STUPID ON ME..BUT AFTER 5 MONTHS IT IS
GOING TO TAKE A LONGER TIME THAN MOST...I WOULD LIKE TO SEE
THE NEW ROOMS AND READ ABOUT THEM EVERY BULLETIN YOU PUT
OUT ...MY SPEECH IS MUCH BETTER BUT IS NOT GOOD ENOUGH TO
TALK ON THE RADIO..I STILL HAVE TO GO BAGK FOR THEREPY
NOW THAT THEY HAVE HIRED A NEW ONE AT THE REDCLIFFE
HOSPITAL..I ONLY GO BACK EVERY 2 WEEKS NOW..I THINK IT WILL
BE A LONG TIME BEFORE I CAN DRIVE SO IT WILL BE A LONG TIME
BEFORE I CAN SEE THE NEW ROOMS..I FOUND OUT ON SATURDAY
WHEN THE FAMILY WERE MOWING OUR LAWN THAT I CAN
DRIVE THE RIDER MOWER, WHICH I HAVE, SINCE I HAVE HAD A
STROKE..YOU CAN USE ANY PART OF THIS ON THE NEWS KEVIN
AND ALL THE BEST FROM RAY VK4PRS

Congratulations on the Editorship of the Redcliffe packet and email news
service.

Believe me if ALL clubs were as prompt, AND CONSISTANT with news
of what is going on in their neck of the woods it would go a long way
towards making the WIAQ State news more interesting PLUS I'm sure
generate more members into the clubs!

Keep it up!!!!

Hello all,
I'll trade a 486 persaio 924 computer for a good working Kenwood HF rig (TS 430, 830, 530, 140, 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte hard
drive. keyboard and mouse. I'm looking for another HF rig for 160 meters. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.

You been dreaming or what? Maybe that's the way law enforcement works in
your part of the world, but nothing you have said is applicable anywhere in my state

that I'm aware of, and I've worked all over the state.

Police DON'T want any part of this--there's nothing in it but grief and wasted time,

and they know it.
Sorta like dealing with domestic disputes, without the "family" element.

BTW -- I worked law enforcement communications for the state for 30 years.

I will be operating the November Sweepstakes mobile from Delaware this weekend, and my question is this - if I remember correctly, the FCC dropped the requirement of having to sign "/portable" when operating away from the home QTH. Is this correct and will I have to sign "Mobile" or "Portable" while operating the contest from my car? I am pretty sure I don't have to, but any help appreciated. Thanks

Tom KZ3X

Has anyone ever seen a list on how much ARRL people are being paid. I have never once seen it posted in QST, or any other place for that matter.Think about that and how its going to affect Amateur Radio more than it already has. I recall reading once that ARRL has already suffered a near financial failure.The heat is on, and Amateur Radio is on the spigot.

Someone emailed me regarding the sale of the
TS-430 I had posted earlier this week. However,
UserID@pacbell.com is not an actual address and
"Your Name" not a name, so I could not reply to your
message to tell you it has been sold.

3436. Club Newsletter Editors: Christmas Poem

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-20 00:00:00 UTC
From: kn4aq@ipass.NOSPAMatALL.net
Message-ID: <3654f989.27816752@news.ipass.net>
Source record: 157600

(This may seem early, but it's perhaps some newsletter editors will get it
in time for their December issues... KN4AQ)

A Ham's Night Before Christmas

(Yet another corruption of Clement Clarke Moore's
classic Christmas tale, this time distorted by
Gary Pearce KN4AQ, and the Raleigh Amateur
Radio Society, Raleigh, NC, December 2, 1996.)

'Twas the night before Christmas,
And all through two-meters,
Not a signal was keying up
Any repeaters.

The antennas reached up
From the tower, quite high,
To catch the weak signals
That bounced from the sky.

The children, Tech-Pluses,
Took their HT's to bed,
And dreamed of the day
They'd be Extras, instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters
For that rare ZK3.

When the meter was pegged
by a signal with power.
It smoked a small diode,
and, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster
Logged a spot of the signal
On the DX PacketCluster,

While I ran to the window
And peered up at the sky,
To see what could generate
RF that high.

It was way in the distance,
But the moon made it gleam -

A flying sleigh, with an
Eight element beam,

And a little old driver
who looked slightly mean.
So I thought for a moment,
That it might be Wayne Green.

But no, it was Santa,
The Santa of Hams.
On a mission, this Christmas,
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax
Right into the shack.

While Mom and I hid
Behind stacks of CQ,
This Santa of hamming
Knew just what to do.

He cleared off the shack desk
Of paper and parts,
And filled out all my late QSLs
For a start.

He ran copper braid,
Took a steel rod and pounded
It into the earth, till
The station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes
In my linear amp...
(Never worked right before --
Now it works like a champ).

A new, low-pass filter
Cleaned up the TV.
He corrected the settings
In my TNC.

He repaired the computer
That would not compute,
And he backed up the hard drive
And got it to boot.

Then, he reached really deep
In the bag that he brought,
And he pulled out a big box.
A new rig? I thought!

A new Kenwood? An Icom?
A Yaesu, for me?!
(If he thought I'd been bad
it might be QRP!)

Yes! The Ultimate Station!
How could I deserve this?
Could it be all those hours
that I worked Public Service?

He hooked it all up
And in record time, quickly
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent.
But the cards and the postage
Will cost two month's rent!

He made final adjustments,
And left a card by the key:
"To Gary, from Santa Claus.
Seventy-Three."

Then he grabbed his HT,
Looked me straight in the eye,
Punched a code on the pad,
And was gone - no good bye.

I ran back to the station,
And the pile-up was big,
But a card from St. Nick
Would be worth my new rig.

Oh, too late, for his final
came over the air.
It was copied all over.
It was heard everywhere.

The Ham's Santa exclaimed
What a ham might expect,
"Merry Christmas to all,
And to all, good DX."

Well, this was an interesting post and some even more interesting responses.:-) I will agree w/ your opinions Bertrams, except on the following: 1. what is a "typical" ham? (I know what you mean but this word means nothing) 2. loser if you cheat on your spouse MORE than once???!!!...how about Ever! I seem to see a paradox here. 3. you own a gun for 'protection' but don't live in a "dangerous" area.....HHMMM...THIS IS WHERE YOU REALLY LOST ME! The Constitution affirms the God given right of "the People" (note: it doesn't say "National Guard") to keep and bear arms to protect themselves from government tyranny (primarily), and in addition...let me breathe...so you mean nothing can ever happen to you just because you aren't in a "dangerous" area???? As an ex-police officer I can definitely attest to the IDIOCY of this assumption! I have a right to defend myself and my family and the moral RESPONSIBILITY to be sure my kids grow up with a Dad....and I'll be sure and tell the bad guys never to commit a crime except for in "dangerous areas"!...jeez....take the anti-gun stuff to Washington DC (the strictest gun laws and the highest gun crime rate) and get it away from here....
I MUST APOLOGIZE TO THE NEWSGROUP FOR EVEN ACKNOWLEDGING A POST THAT DIDN'T BELONG IN THIS GROUP TO BEGIN WITH....BUT IT TICKED ME OFF!!!!!
Mad Dog is MAD!
37 I mean 337 I mean 373 I mean 73...jeez I can't even type I'm so miffed....I must be,
a....a.....a.....LOOOOOOOOSSSSSEEEEEERRRRR!! :-) Oh for the sake of rubbing it in: I love guns, I love guns, I love guns, I love guns, I love guns, I love guns, I love guns.....see I'm a "typical ham" (I repeat myself).....Hey guys, was that massive retaliation or what?

So remember folks, before you post a "Thanks to all" message letting people know you've recieved the info that you needed and no other replys are nessesary be sure and send Burt a detailed explanation, but do it prior to thanking everone so that it will have crossed Burts mind first. The timing is very important since Burt may not understand the purpose of your post if he reads the thank you message first, thus creating more confusion for Burt about why your thanking everyone.

Tim, ka8ddz

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <716>
.....
>From the Editor's Desk:

Thanks to the HTML wizardry of Mark Hartman, we now have a completely automated ACS Subscription Services web page! If you wish to subscribe or unsubscribe from either the ACS Newsletter or from the separate EMCOMM Bulletin mailings, simply point your browser to http://acs.oes.ca.gov/subscribe.html If your address changes, unsubscribe from your old email address and subscribe at the new one. The Subscription Services location will be at the bottom of this, and future Newsletters.

We continue to receive Y2K information from our Newsletter subscribers. As we receive it, we'll post it in the Newsletter for your reference. Also, we have an interesting article available from the Canadian Centre for Emergency Preparedness (CCEP) conce rning some of the unique communications/logistics problems encountered during Princess Diana's funeral last year. Go to 'What's New on the Web' for more information.

Stay safe, everybody -- see you next week! Dave Larton, Editor
.....
Please Welcome:

Steve Hailey <HaileyS@usa.redcross.org> Washington, DC

While browsing through your website via FEMA's site. I happened upon ACS. As a fellow disaster communications professional I just want to say what a great program you folks have there in California. I coordinate Disaster Communications for the American Red Cross at our Disaster Operations Center in Falls Church, VA. I would be delighted to be added to your newsletter and any other discussions on Disaster Communications.

I can be reached either via e-mail or telephone @ 703-206-6738.
Sincerely,

Steve Hailey
.....
Ron Lantz/K6CJM <mnrlantz@fea.net> Dana Point, CA

I've been a ham since 1952 when I was 16 and have had the same callsign. I'm retired now so have more time to be involved in emergency activities although I've always been involved in the communication efforts, beginning Dr. Richter set up the Temple City Sheriff's substation as the center for our equipment. That was back in the late 50's.

I currently check in for So. California Edison with OES on Wednesdays at 10a.m. on 7230. It was on January 14, 1994, that I checked in with OES after the Northridge earthquake and got connected to the Sacramento Red Cross who heard me on and had me provide a crucial link to the L.A. Red Cross to determine inventories and routings thru local airports for blood transfers. The story made World Radio's March issue and as a result, I received the highest award that Edison gives - the Horton Award.

Since then I have worked with CERT in Huntington Beach, taking classes they offer in Search and Rescue. I currently check in to the Edison ECS (emergency communication services) net on Thursday evenings at 8pm on 224.760/100 and EARN (Edison amateur radio net) on Tuesday mornings at 745 a.m.,same frequency. Just recently, I've joined the HDSCS (Hospital Disaster Support Communications System) for Orange County and am assigned as a core member to Mission Hospital in Mission Viejo.

I enjoy being a ham and work HF Phone and CW also for fun as well as the being operational ready in case of a disaster. It's been a great hobby and I've worked from various stations around the world when I was in the Air Force (ex KR6QS in the Ryukus Islands (Okinawa) and other MARS stations. My son followed in my footsteps and is KA6TQO. Can't get the wife interested tho!!!!!!!

This week's EMCOMM Bulletin:
EMC158 Identification Cards
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC158 Identification Cards Revisited For release 11/16/98

In the mail we receive here at State OES, one of the most common questions has to do with the subject of identification cards. Who needs them? What should and shouldn't be on them?

Volunteers participating in an EMCOMM unit should have an ID (identification) card issued by their served agency if they are tasked to serve another agency or undertake a field assignment. Some agencies issue them to all unit participants, some only to selected personnel - such as active volunteers, or those who may need access to City or County buildings, fire stations or other communication centers. (California also requires a separate Disaster Service Worker registration, which some agencies use in place of an ID card.)

In general, local agency procedures establish what information is to be placed on the card, but it is usually the minimum that will fully identify the person by physical detail. Words such

as 'POLICE' and 'FIRE' should be avoided to reduce the possibility that EMCOMM personnel may be mis-identified as public safety professionals. It is usually best if the ID card bears the logo of the served agency, a picture of the PARTICIPANT, and an established expiration date.

ID cards should be carefully previewed with members of the served agency, and designed in a way that police officers, firefighters and others will recognize EMCOMM personnel as a local asset. In case of disaster, an ID card may be worse than useless if the officer to which it is presented fails to recognize it as belonging to someone with important disaster responsibilities. Hence, neighboring jurisdictions should be familiarized with EMCOMM identifications cards in case mutual aid is requested by or sent to another agency.

State OES does NOT have a statewide Emergency Communications Unit (EMCOMM) identification card for use by other agencies or units. Each must develop its own. State OES may issue its standard agency ID card to selected State OES ACS officers after a specified service period, but it is not a 'right' by reason of unit participation. Active participation in the served agency often does not require such an ID as personal face-to-face familiarity may be more important. --- To subscribe to bulletins, see the ACS Subscription Services Page at http://acs.oes.ca.gov/subscribe.html - For training assistance contact the ACS Training Officer at the web site or send an email to David_Larton@oes.ca.gov - Submissions for future ACS bulletins: please send to: State ACS Officer Cary Mangum: Cary_Mangum@oes.ca.gov or Deputy ACS Officer Ken Bourne: Ken_Bourne@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and a FTP Archive: ftp.ucsd.edu/hamradio/packet/tcpip/incoming for some bulletins. For earlier ones:

Well, I may not know anything about radio, but I certainly know about
law enforcement.

>The police agency would respond like it does to other technology crime.

How the police agency would respond would be entirely a matter of internal
policy. In some instances they may take a phone report. In many instances
they will probably send a cruiser over to the affected area.

Let me phrase this another way.

Granny calls the cops because she hears that 'nasty CB operator' (who is
really a ham operator, but the public doesn't know what the difference
between a CB operator and a ham operator are anyway) coming through her
telephone.

Chances are, a cruiser is going to be dispatched to the ham's house, because
Granny told the dispatcher who was causing the problem. (No different than if
the ham next door had his FM stereo turned to 'max' and was playing music.)

The cop is going to arrive, ask the ham if he is operating a radio, and
if he sez 'yes', then the ham will probably be told he is interfereing with
his neighbors' phone, and to stop transmitting. The cop doesn't care if
the ham is legally licensed under Part 97 to operate the radio. That's
because the cop is woefully ignorant, just like Granny is. The minute the
ham says that he is, indeed, operating a radio, the ham instantly becomes
guilty, and the onus is on him to prove he is innocent. (which is tough,
since he is, in fact, coming through Granny's phone.)

What we end up with is a large pissing contest between the ham and the
cops. Depending on how much of a 'hick factor' we have on the cops, the
ham may, or may not, win.

Indirect evidence here on usenet -- reports from people in states with
scanner laws; the case where a kid's radio was confiscated for receiving
'police frequencies' because the cop desensed it, and so on -- all go
to show that the liklihood of a positive outcome for the ham is not
very promising.

Hi,

Need a GP350 speaker/mic, prefer mic with proper plug and not a gp300 mic adapter... is there such an animal and what is the cost for a good used one... or a bad used one....and if not, the same questions for the gp300 mic adapter and mic...
EMAIL YOU REPLY PLEASE!
thanks,
Randy

3446. A Yaesu FTH 7009 handheld for sale

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-21 00:00:00 UTC
From: The Crew <dc@citynet.net>
Message-ID: <7381m8$6ue$1@news.citynet.net>

Have a Yaesu UHF handheld, model fth-7009, 4 watt 6ch, handheld radio for sale. Needs batt. tab replaced to lock battery in place. probably $1 . radio is bandsplit 460-470, and includes dtmf option. Has NC-40 2bay charger for rapid/slow, and includes antenna, and 2 batteries, one of which seems dead beyond repair, other holds a charge well. Ptt switch requires a purposeful push but the radio works fine, tx/rx. Will sell for $75 firm price and uship. I will program the radio to your specs. (heck, that's only 50 for the radio and 25 for the charger.... I think they're worth that....) thanks for the time and please email responses.
Randy

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you.

Burt

Ooooh, TALK TOUGH, Casey Thrower!

Obviously, you don't know much about different cultures. Masa is Japanese. "Ragheads" as you call them are primarily Arabic. Geez, you can't even use the proper racial insult!

And this coming from someone who accuses others of being bigots, racists, prejudiced, etc.

So what do we call a dimwitted redneck from Alabama with a weak signal? N4GKS.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

>>and all the public's RF-sensitive devises, hams who passed an exam for
>>which they wereprovided all the exact questions and answers,

Yup. The FCC got the idea from the FAA. All pilot license examinees have access to their Q&A pool. For hams, the question pool size is about ten-times the number of questions which will appear on one's exam. My fifty-question Advanced exam came from a pool of over 500 questions. The forty-question Extra class test I'll be taking will come from a pool of about 430 questions.

>>and no code test.

We keep those folks under lock-and-key - they're permitted to play only above 50 MHz.

>"Turning loose" hams who have satisfied the gov't's
>requirements (minus that ridiculous old corset known as
>"Morse code testing") is emminently more sensible than
>retaining that dusty, rotten, old corset of a piece of
>testing insensibility called "Morse code testing"...

More hams use CW than build radios, so I imagine you'd like to see those test questions pertaining to Electrical Principles, Circuit Components, and Practical Circuits eliminated, eh? Might as well dump the Antennas and Feedlines questions, too - after all, everyone uses commercially-made radiators, right?

Code testing has its place in amateur radio. We're a service of "onlys" in that we're the only FCC-regulated service which is:
* permitted to build and/or modify radios
* permitted to be frequency agile (no other FCC service has user-accessible VFOs)
* permitted to have on-the-air contests on a regional, national, or world-wide scale
* permitted, nay encouraged to carry on propagation-related experiments
* self-trained
* self-policed
* permitted to erect repeaters and beacons for no other reason than to inflate one's ego
* permitted to transmit if for no other reason than to just chit-chat
* called upon to fill in communications left void due to natural or

man-made disasters
* permitted to use almost every known mode
* made up of individuals who can see a new transmitter while looking at a junked TV, see a new antenna while looking a a spool of wire and see a new lead-in while looking at a box of Popsicle sticks

and the list could go on and on ad infinitum.

We pre-date radio regulations, for it was the amateurs at the turn of the century who invented, experimented, and perfected the science of wireless. And for all the progress we've made, we still like to use code - about half the HF conversations are conducted utilizing CW. That CW is is the only mode permitted on each and every amateur HF frequency, and, that CW is the only mode common to all the world's HF-licensed hams are reasons enough that code be kept as a testing requirement for HF privileges.

With that I'll wish you all a great weekend.

Wrong, bunky: Eliminate all the old stuff and replace it
all with MORE and stiffer (read: thorough and in-depth)
questions ...

>Code testing has its place in amateur radio. We're a service of "onlys"
>in that we're the only FCC-regulated service which is:
>* permitted to build and/or modify radios

Care to re-word this statement slightly wrt "only ...
service" ???

>* permitted to be frequency agile (no other FCC service has user-
>accessible VFOs)

Wanna re-word this one, too ???

>* permitted to have on-the-air contests on a regional, national, or
>world-wide scale

I've been wondering about this "contest" business, since
it's not codified in Part 97 ...

>* permitted, nay encouraged to carry on propagation-related experiments

... in the spirit of Part 97 ...

>* self-trained

... considering the cost of EE schooling, well, whaddya
expect ??? ...

>* self-policed

... you've GOT to be kidding ... when was the last time an
amateur billy-clubbed a recalcitrant "fellow" ham and hauled
him/her off and threw him/her in the slammer, hhmmmm???

>* permitted to erect repeaters and beacons for no other reason than to
>inflate one's ego

... somehow I don't think this is high on the list of
reasons for most hams ... maybe for you, perhaps ...

>* permitted to transmit if for no other reason than to just chit-chat

Then what the heck do commercial broadcasters do 24x7? And
charge for it, hhmmmm??

>* called upon to fill in communications left void due to natural or
>man-made disasters

... fulfilling Part 97, and then some ...

>* permitted to use almost every known mode

... except, in some cases, the common sense mode ...

>* made up of individuals who can see a new transmitter while looking
>at a junked TV, see a new antenna while looking a a spool of wire
>and see a new lead-in while looking at a box of Popsicle sticks

... now THAT's *my* amateur radio!! ... but NOT the ONLY
aspect of it ...

... AND we're the ONLY service stupid enough to retain Morse
code testing which eveyone else has figure out serves no
purpose SINCE there is no longer any need to ensure that
amateurs can understand the Morse code as used by the
commercials and the military, SINCE those entities no longer
use Morse ...

>and the list could go on and on ad infinitum.

... with this kind of list, definitely ad nauseum, even ...
;0) ...

>We pre-date radio regulations, for it was the amateurs at the turn of
>the century who invented, experimented, and perfected the science of
>wireless.

I don't think they were "amatuers" as we know them today (I
think "explorers" is more apropos), if they "pre-date"
regulations which by their nature tend to define things ...

>And for all the progress we've made, we still like to use
>code - about half the HF conversations are conducted utilizing CW.

Interesting statistical observation ... what's it based on??
Anyways, we STILL like to use most, if not ALL, of the
modes, Morse code using CW included ... some of us only use
a few, or two ... or one ...

>That
>CW is is the only mode permitted on each and every amateur HF frequency,
>and, that CW is the only mode common to all the world's HF-licensed hams
>are reasons enough that code be kept as a testing requirement for HF pri-
>vileges.

Retain testing JUST because Morse code on CW is? Not good
enough, bunky: If we are gonna single out a mode for
testing, then let's test for ALL of 'em. However, as there
is NO PICON concern that cries out for Morse code testing,
or testing for any other mode for that matter, the only
reason apparently left is "because that's the way we've
always done it; it's tradition, and we cannot do away with
tradition, no matter how ineffectual, non-purposeful,
without merit or practical value in the real world it may
be," and that aint' good enough ...

>With that I'll wish you all a great weekend.

Same to you, too, bunky. Just don't forget: Amateur radio
doesn't need Morse code testing any more. ;0)

Who allowed you to speak for everyone?
Why is it hams NEED to say "we?"

> You're not an authority figure in this or any other newsgroup Fisher
> and according to the ARRL even with your supposed "electronics
> teacher" credentials they don't think you're qualified to hold down
> the voluntary position of VE.

That is a false statement. Ask them why they do not want me
to be a VE. The fact is they do not like the fact
I do not fully support the ARRL. The reason has nothing to do
with being a VE.

3458. A story most hams will not "get."

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-21 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <736c49$l2s$1@nnrp1.dejanews.com>
Source record: 157466

A Tail (spelled correctly) of Two Hams.

In a place far, far away in a time not so long ago
(actually Cape Cod 1991) there were two hams who were friends.
Moose, KF1OF, and Dick, KC1HOT. It came upon a great contest
weekend in November (yes I know great contest is a contridiction
of terms). The contest was called Sweepstakes not to be confused
with the so called "SS" infamous during World War II. Although
both SS's had a tendency to push out the small guy, the ham radio
version is more benign. KD1OF was intent on scoring big in the
contest. In fact he formed a special club called the Old Farts
of Cape Cod (he used the suffix of his call to get the name),
this club gathered huge sums of money by selling off the estates
of dead hams in the name of education and then spent the money
on Japanese radios, American beams, and computers in order to build
the ultimate contest station.

The great day came (pun?) and the members gathered
together. They pooled their best cliches (finest kind, Righto,
Fine Business, none of your beeswax, Ciao, HI HI,
Thunderbumpers, QSL, Let me be honest wid ya, anywho,
destinated, arrivanated, 59 (but never ever Six nine), let me
drop it (never said in mixed company). They all practiced
saying, "Cq Contest, contest, contest, contest contest, contest,
contest contest, contest, contest contest, contest, contest
contest, contest, contest contest, contest, contest contest,
contest, contest contest, contest, contest" and then listening.
They drank a few 807's (beers). They ate some popcorn and beans
(in order to sing the club song-named after the club). Finally
the big moment arrived (or should we say arrivaniated). But
where was the ham who could really score, KF1HOT, Dick? No one
could find him. It was decided a Contestpediation would be sent
out to Dick's house as the L A N D L I N E was all twisted up
in a knoted pair.

The Contestpediation arrived at Dick's house, all was
quiet, the beam was erect but not rotating, the dipoles were
lying in the trees softly, and the whip (on the car) was
slightly bent. The hams knocked on the door, but there was no
answer, even though a few lights were lit softly and both cars
were in the driveway. The hams gave up in despair, and they
headed back to prepare for the SS. On the way back they laughed
that Dick probably was doing "honey Dews" (honey do this, honey
do that-hams love to use this term). They lamented that Dick was
fixing the rugs, or hanging plants, or doing light plumbing.

Moose got suspicious that there was more to this
disappearance, and headed back to Dick's QTH. When he got there
he peeked through the blinds and what did he see? He saw that
the lights were dim, but not out. He heard the music from the
movie "10." He saw Dick's wife of 15 years dressed in a light
silk blouse. As he watched it was clear that the love and affection
of this couple was as warm as it was genuine. They playfully went
from room to room with an occasional kiss and warm embrace. It
was clear Dick was not going to be at the contest, but he was
not going to miss it.

When Moose returned to the rest of the hams they
inquired as to what was up at Dick's home. Moose replied to the
hams, "you wouldn't understand", but Moose understood. Moose
left the hams to their astonishment, and went home. Upon arrival
his wife greeted him at the door and said, "Honey you are going
to miss the contest!" Moose replied, "I will never miss another
contest, there is nothing about contests to miss." Moose and his
wife drew the curtains and began life.

Disclaimer: Nothing in this story relates to any hams living or
dead (assuming any hams are alive in the first place). The story
is complete fiction.

The National Loser Test

If you answer yes to ANY of the following questions you are a loser:

1. You hit your spouse.

2. You are a child molester and think you ought not kill yourself.

3. You ever drove drunk.

4. You are a typical ham radio operator.

5. You take illegal drugs.

6. You cheated on your spouse more than once.

7. You are in jail for a criminal conviction.

8. You are a saleman at a small radio station.

9. You think audio processing is important to a radio station
(over progam content).

If you answer YES to three of the following you are a loser:

1. You are divorced and think you are not at all at fault.

2. You are fat and think it is not your fault.

3. You think alcoholism is a disease.

4. You are on welfare

5. You hit your children.

6. You are "living with somebody."

7. You use profanity frequently.

8. You own a gun "for protection" but do not live in a dangerous area.

9. You subscribe to Penthouse et.al.

10. You are proud of being a homosexual.

11. You are a member of N.O.W.

12. You smoke.

13. You dye your hair

14. You do not defend those that you agree with for fear you will not be liked.

15. You prefer doing anything over being with someone you truly love deeply (i.e. soulmate).

16. You are two faced.

15. Did not graduate high school

3 yes= smalltime loser
4-6 yes= moderate loser
7-10 yes think about Dr. Kevorkian
Over 10 yes= act on Dr. Kevorkian

Please feel free to add your own.

The best selling book, "Hitler's Willing Executioners" by Daniel Jonah Goldhagen tells the story of how ordinary Germans (like hams) allowed the holocaust to take place. The author shows the ingrained deep hatred for Jews that Germans had for Jews before Hitler came to power and that there was a widely held shared view that the the Jews ought to be eliminated in some way from German society. When Hitler, ultimately, chose mass extermination as the only "final solution" he was thus easily able to enlist vast numbers of Germans to carry it out.

Of course those Germans NOT alive during World War II cannot be held responsible. But I refuse to respond to German "CQs" because I feel the mindset of Germans even today would allow a repeat of the holocaust if the only could find another Hitler. This was shown during the Gulf war when Germany was the one selling weapons and materials to make poison gas to Iraq.

Surely there are some caring decent German people that would resist another Hitler and another holocaust but there are too many Germans just waiting to finish what Hitler started.

Is there anyone that agrees AND is willing to say so?
I notice that hams rarely will stand up for or stand against anything.

I am not the only one who notices how hams cannot properly thank

From: K2GKK@K2GKK
To: THANKS@USBBS
Subject: "Mass" Thank You Bulletins

Recently, there have been quite a few "THANK YOU" bulletins addressed
TO ALL @ ALLUS from individuals who have requested and received help on
one subject or another through packet. This is equivalent to a newly
married couple substituting a classified ad in the local paper for the
individual (and specific) thank-you notes that etiquette and courtesy
DEMAND that they send in response to the gifts they have received.

If you request help and get it, EACH individual who provided that help
should get an individual and personal response/thanks. If you are not
willing to do that, keep your requests for help local. The folks who
took THEIR time to answer your request DESERVE equal amounts of
YOUR time and effort.

The apparently widespread use of shotgun BULLETINS instead of the personal
thank-you messages that are deserved contribute to a general and growing
unwillingness on the part of many amateurs to respond to help requests.

Think about it. 73 de Mac/K2GKK @ K2GKK.#OKC.OK.USA.NA

> > system?
I think that there may be a bit of confusion here. The old Heathkit
recievers looked for the strongest WWV signal at 5 10 or 15 MC and
attempted to decode the 100 hz subcarrier. It worked fairley well and
the units are still arround and working.
The new recievers work at 60KHz and decode the 60 KHz carriers data of
WWVB. This system works very well. I have purchased sevel of the Oregon
Scientific clocks from 39-59 dollars for use in the shack. Additionally
I have opened the units up and built a small data buffer on the active
antenna. The thought being that I would like to connect it to the
computer to automatically align the computers time. (Someday) I leave
the active antenna powered up all the time with a seperate power supply.
(Wallwort) When the time code is good any application can useit. The
only reason that the recievers sample at night is that 60 KHz
propogation generally is 10-15 db stronger at night. These little clocks
must have a fairly clever decoding program to put up with the noise at
60KHz. It takes a minute to gather all of the bits needed to synchronize
the clock.
I would really like to see the code that was developed.
Good luck.
Paul.

Interesting. I don't agree with everything, however. You make blanketed assumptions. Your opinions are too black and white, which is fine if that's the way you believe. But in reality, life and human nature isn't always as it seems.

This isn't just limited to amateur radio radio. It is a growing trend in other newsgroups when someone is looking for information. Whether or not it's right depends on whether people accept it as proper behavior over time.

What a complete thoughtless bastard you are. You post your mindless blabber here day after day, making snide remarks to newcommers who have done NOTHING to you, holding amateur radio in contempt, telling us all how YOU think we should act. You post the same shit over and over and over and then you ask "How many times do I have to read..."

People in the Eastern half of the North American continent might also consider using CHU for a time signal - at about 25 seconds into each minute they transmit the time as standard 300-baud AFSK in ASCII. CHU is on 7.335 and 14.65 MHZ. I was able to hook up my table radio to a TRS80 Model 100 and copy the time signals quite easily using the built-in 300 baud modem. Now, getting down to sub-second accuracy may require more hardware, since you'll want to use the actual bit timing to determine the start of each second- but for many purposes recycling an old 300 baud modem might be all that's needed.

All the info below IS pertinent to repeater operation, BUT may not be relevant to what you may want to do with a cross-band mobile radio. Technically, your use would be for a Remote Base, not a repeater, and the legal requirements would be different.

In the final analysis, it is all a moot point as soooo many people ignore the ID and control requirements for repeater operation anyway. It's wrong, but that's the way it is in the real world now-a-days.

3484. SPECIAL ANNOUNCEMENT

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-21 00:00:00 UTC
From: dx302man@aol.com
Message-ID: <19981121141841.12387.00001114@ng28.aol.com>
Source record: 157492

SPECIAL ANNOUNCEMENT

The Executive Steering Committee of The Great Liberty Net has designated Saturday, November 21, 1998 as Jammer Appreciation Day to honor W9ART as Jammer of the Year.
Grand Master of Ceremonies will be K5BLB. In addition, the Net's Board of Directors has arranged a temporary stay on the quiet hours imposed on WA9KJI for this event.

A special address will be delivered by K5ZU, who promises to be home from the drug store by net time. Arkansas Bob has agreed to provide a special repeat performance of his famous "You People Make Me Sick" soliloquy. Background music will be provided by W2YEE.

This marks a conciliatory note from Bob, as he was, at first, most displeased with the outcome of the election. This change of heart was initiated by DX302MAN, who proved to Bob that the of the election was declared accurate and valid by the Chairman of the Federal Election Commission.

SWL'ers can receive QSL cards of this special event by sending a SASE to the netters and jammers of their choice. This would be a good opportunity to achieve the coveted "Heard All Jammers" and "Heard All Netters" awards.

"Where's that big ol' DX302MAN?"
"I want to hear him listen tough"

Source record: 157303

That's what ham radio is about - building and experimenting. Just to purchase a rig and flick it on isn't real ham radio. Particularly on HF, you best have an idea what your doing. I'm in no way a perponent of code but everything has it's place. Code is part ham radio, I can see lowering the code speed requirement to 10 WPM. To just grandfather 600K Tech's of any class, that i'm not infavor of. If there serious they should consider only the Tech-Plus people. At least they passed there minimum code requirement. I can understand the guy who has tried passing his code test for some 20+ years, that would ititate me also.

Example: I measured the board, but I keep cutting it on an angle - that tells me that i'm no carpenter - should I quit of keep trying. Maybe i'm good at some other part of carpentry, there is more than cutting boards. Just ham radio, there is more than just code. Give the guy a break.

This discussion on code "V" no-code is like talking relegion, politics, boys "V" girls, etc., this could go on forever. The ARRL and the FCC are going to do as they please, like it or not.

I think that it is pretty self explanatory... My amps where in a box
designed to hold a pair of 15" subwoofers....

They are quite large.

Stumpjumpers are Not your friends you see,
They are all gay, this we can see.
They SPAM people everyday,
Yes they do because their gay.

They waste our bands all day long,
They wont be happy will the bands are all gone.
They run their mouths on 75 meters,
And laugh and joke because they have small peters.

They cuss and cuss with mouths like truckers,
Because they are all some imbred FU*#ERS
They try to act BIG AND BAD,
Because they want to be like their Dads

So when the FCC comes into town,
Make sure that you are not around.
They are all going to jail,
And no one will ever post their bail.

So let this be a lesson to you,
Dont join in with them and this wont be you.
But if you do join in their masqerade,
You will see BIG BUBBA and be his slave.

For all the trash of the amateur land,
Lies deep with in the 75 meter band
So be careful on who you talk to,
Or the FCC will stick it to you.

For the ways of these groups are truelly sad,
Mean and trashy and not to mention Bad.
So when you think of joining in,
Remeber this ryme and think again.

3502. R7 on the roof...TVI

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-22 00:00:00 UTC
From: "Ken Pierce, Jr." <nu3a@ix.netcom.com>
Message-ID: <7397it$373@sjx-ixn5.ix.netcom.com>
Source record: 157356

I recently moved my R7 to the roof where it seems to work much better...no unobstructed...but now I have TVI. It seems to be only certain channels, (no front end overload,). The radio is on the second floor. I dropped a ground wire straight from the radio outside the house and also ran a ground wire from the antenna to ground. That ground wire had to be pretty long; about 50 feet long. I have tried a low pass filter that didn't help either. The TV's are on cable and I tried disconnecting all but one set eliminating ant TV splitters...also no difference.

If I can't figure it out the antenna goes back on the ground in the back yard where the signal wasn't as good but I didn't have the TVI problem.

Any help would sure be appreciated!
Thanks,
Ken....NU3A

For Sale MFJ-949E Deluxe Versa Tuner II 300 Watts. Full size dummy load, 8 position antenna switch, 4:1 balun, very heavy duty inductor switch (original was replaced with a very heavy duty ceramic switch-much better then the factory installed switch), Covers 1.8 to 30 Mhz. Handles 300 watts PEP SSB. Tuner is in good shape, the replaced Inductor Switch had to be installed about 1/2 inch higher then the original on the face plate but works well. Asking $45 plus shipping.

greetings Bob

Your message hit a point of interest to me. I have been involved in amateur radio since the mid 60's.
cw to start with and a little ssb when my Canadian advanced came along. I never really developed any hf voice interest.
I got involved with 2 meter fm and did a lot of volunteer work with the local fm repeater groups.
I got involved with a local chronic care hospital to help bring amateur to the patients. Building devices to allow quads to operate their hospital amateur radio station.
I got involved with packet in the mid 80's.
Since the mid 80's, I have also been involved in amateur radio display stations.
While at the stations, I see/hear most amateurs chatting about their use of 144, 450 and hf. When I inquire about any activity on other bands I usually get a responce like 'when more people are on that band, I will consider it'. Most amateurs won't get on a new mode or new band unless they can see/hear about activity on that band.

Most modes like, ssb, packet and aprs etc, got their start when amateurs, already on that mode, demonstrated it's use.

Most non-amateurs got onto 2 meters because they saw sooooo many amateurs carrying and using handhelds.

I was sold on getting onto 2 meter fm, back in the very early 70's, when I was shown it's operation while I was being given a ride to an amateur radio demonstation station. I was sold on its high quality audio, that was before we went to narrow band audio.

The expansion of bands like hf, 144 and 450 will continue, probably expedentially (spelling) until some enterprising amateurs start demonstating communications on the other, less used, bands.

The same thing will happen with the other modes. Get more amateurs using more modes and you will slowly start seeing their expanded use.

The written word does not convey emotion well. Sometimes it is difficult
to tell if someone is serious, or posting a tongue-in-cheek message.
Especially given their prior histories.

>No one cares about alt.law-enforcement. As far as I am concerned, most
>police officers in this day and age are nothing but idiots with guns who
>can't keep their nose out of other people's business.

You're not too far from the truth. I've been involved in the selection
process for two training academies, not directly, but in a support
capacity. Those with political connections, or relatives on the job
already were the first to get selected. Next in line were the 'gung-ho'
testosterone-laden males and females who showed up with their 'high-and
tights'. The academy was little more than a municipal 'boot camp' with
some classes on police practices, policies, and procedures thrown in.

Wrong, Burp. I do indeed hold a valid amateur radio license. I have been inactive for several months and have sold all my equipment...because, as you have correctly stated, ham radio is dying. I figured I better sell while there was still a market for ham radio equipment. Used the proceeds to help purchase a new Dell computer. But nonetheless, I do still hold a valid license.

Message-ID: <739f4l$aq0$7@callisto.clark.net>
Source record: 157368

Hello. I just got my MFJ-G5RV in the mail a few days ago only to learn that is is *EITHER* a 160m antenna, or a 10m-80m antenna. I had suspected that if you set it up a given way that you would be able to work 160m-10m, not either or. Anyway, I'm open to suggestions on a good 160m antenna. I would prefer a diapole-type antenna, but all suggestions welcome. Coax or ladder-line feed lines are fine. I don't have antenna restrictions, but I am limited in space due to trees so size is a factor. Any help is appreciated. Thanks a lot in advance.

Hello. I know that, for example, you can add extra modules to a Yaesu FT-767GX radio to add V/UHF bands to it. Well, here's my question. Is there anyway to add any V/UHF bands to a TS-140S by adding additional modules? I know about the extended TX mod for SW, but I'm wondering if by adding modules you can add any ham bands above 50 MHz. And, if so, where would I get the modules and for about how much? Thanks a lot for reading, and thanks a lot in advance.

3517. My Restructuring Proposal

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-22 00:00:00 UTC
From: W8EMS@webtv.net
Message-ID: <25143-36583EC6-3@newsd-152.iap.bryant.webtv.net>
Source record: 157371

After listening to 75 and 20 meters and being exposed the stupidity of some posters on this news group, I agree that there needs to be a restructuring of the amateur license classes.

First, since everyone buys their rigs to support te economy of Japan and Southeast Asia, we can drop the theory and electronics part of the test; to be replaced with questions such as:

Your new radio requires 120 V. a.c. to operate. You have both 120 V, and 240V sockets in your wall. How do you know which to use:
.
(a) The 240 one looks funny. .
(b) The plug won't fit the wrong one. .
(c) Give me a hammer and I'll make the damn . thing fit.
.
(d) Just run it off a car battery .

Second, in addition to the rules and regulations we will add a set of questions on manners.

Never to fear however. I propose that anyone failing the part of the test on manners will be given limited operation privileges on select frequencies in the 75 and 20 meter bands and full privileges on the 26.965 to 27.407 Mhz band.

Feel free to file your comments.

Make sure you listen extensively to 75m and 14.313. These are "real hams"
(passed the all-important Morse code test at 13WPM or better) and will give you
a good perspective on what amateur radio is all about.

Hello. Forgive me if this has already been posted. I just saw "Enemy of the State" last night, with Wil Smith. Every time they showed a satilite moving in space, you could here "CQ CQ CQ" in morse code. Kind of interesting.

Also, when some guys from the NSA needed to talk to the DC police, they tuned their Kenwood HF rig to 7.something MHz. I didn't know the police still used HF.

If he was using a tubed transmitter or amplifier, with higher than rated
plate voltages, then yes, he very well could have been emitting damaging
X-Rays from his station.

Do You remember any call signs, etc?
IOW did you hear anything like- AB4CDE ?

or was it like "That's a Big 10-4?
Ham stations use their call signs when beginning and ending a contact-
CB stations use a handle like BloJoe calling BloBob.

I don't know much about the molex plug connection, but I did get a tuner module that used that plug from http://www.qth.com/BetterRF/ and it works just fine for me.

And if I can quickly give a positive "plug" for the company that sells it; within 3 days of ordering it (by phone) I received it by mail (very good, I'd say for a piece of equipment sent from New Mexico to B.C., Canada...). Sure beats hell out of some companies that I've mailoredered from, whose sales reps have garanteed that the product I want is in stock, and I still wait a month for.

Only a very sick mind would pester people until he was ignored.
Did Rambutts mom not pay him any attention? Did his dad,(whomever he
was) not tell him he loved him? I say we need to have a fundraiser and
get Rambutt the help he needs. Come on folks! Lets help Rambutt before
he starts to torture little animals or worse. You know, in Florida he
was banished from the area of a school for trespassing. He kept coming
onto the property of a school walking for exercise! (That fatass says
he's a "power walker"! BWAHAHAHAHAH! Look at his fat face on his
stations website http://www.mix103fm.com/html/drew.htm and tell me
he's a power walker. Jesus.) Anyway, he was told he can't "walk" on
school grounds which to me is fine, because I wouldn't want a weird
looking dude on my son's campus. Anyway, Drew not only causes problems
on here, he causes problems wherever he goes. Well, read for yourself.
Here's a message he sent when he was mnmaniac@aol.com.
ï¿½
The Peoples Republic of Orange County Schoolsï¿½
Author: ï¿½ MN Maniac
Email: mnmaniac@aol.com
Date: 1997/06/03
Forums: fl.politics

I'm a "Power Walker", which means I take long, brisk walks as part of
my
daily workout routine. I average 8 miles/day, 6 days/week. I live in
a
fairly new Orange County subdivision with a neighborhood elementary
school. Since we moved here last July, my daily walks have taken me
through the parking lot of the school. Not into the school building,
not
onto the playground; simply across the length of the parking lot. For
the
past 11 months, nobody has had a problem with this. Today, I was
stopped
by a security guard and questioned as to what I was doing there. After
I
explained that I lived in the neighborhood and was on my daily walk, I
was
told that all "visitors" on the school grounds must sign in and be

assigned a "badge." When asked why nobody had mentioned anything to me
over the past 11 months that I have been walking through there on almost a
daily basis, I was told that it was because "a parent called and
complained. She was concerned about the childrens' safety."

So, let me get this straight...even though I am a law-abiding citizen who
PAYS for that school with my property tax dollars...even though I had done
nothing suspicious, committed no crime, and did nothing to endanger the
safety of anyone at that school...even though I have no children of my
own, but yet am forced to pay ridiculously high school taxes to support
the education of other people's children...I cannot walk through the
PARKING LOT of my neighborhood school without being given official
permission to do so, simply because a parent (whose children I am
supporting with my property tax dollars) feels that my walking through the
school parking lot may be a threat to the "childrens' safety?!"

If there are any legal professionals in the audience, I would like an
opinion as to whether or not they have a legal right to prohibit me from
walking on the premises. If not, what is my legal recourse in the event
that they attempt to force me from the premises?

-Drew in Sunny Central Florida-

Can you see this fatass walking 8 miles a day? BWAHAHAHAHAHAH!
Now here's a spoiled brat who can't take no for an answer. Gonna
challenge a school because he can't walk on campus. What a complete
and utter moron. This post show's that no matter what we do, Rambutt
ain't gonna go away. Power walk indeed! BWAHAHAHAHAHAH!!!!

3526. TS-430S noise blanker fix

>the continued existance of amateur radio for the last 80+ years. Without
>'em there would be no ham radio hobby today.

I don't think anyone on the HQ payroll has been employed
there for 80 years. The majority of the work performed by HQ
staffers is not directly related to preserving amateur radio in the
sense you mean. Most of the work done by HQ staff is day to day
operational tasks needed to get QST and other ARRL publications
out the door, to run the lab, to run W1AW, and to manage member
services and the VEC program. There is only one paid lobbyist
whose job it is to defend amateur radio. Even that position is
relatively new in the context of 80 years of ARRL history.

The ARRL has always depended on unpaid volunteer members
and officers to handle the bulk of the political maneuvering involved
in amateur radio. A few of the paid staff, such as Ed Hare, do participate
in industry standards committees and the like, but that's the exception
for paid staff, not the rule. If the ARRL can be faulted, it is for not putting
adequate resources into the political matters that are needed to preserve
amateur radio. Sums which could have been spent on lobbying activities
wind up paying for a museum or a new building instead. (Not that those
things aren't worthwhile, but there are priorities here.)

>>I have
>>never once seen it posted in QST, or any other place for that matter.
>
>That's okay, I've never seen your salary published in QST, either.

When positions are advertised in QST, the salary range being offered
is stated. Those salaries are below average for the publishing industry,
and well below average for technical jobs in the private sector. Nearly
anyone on the ARRL paid staff could make more money by leaving
ARRL and going to work for another company. That many don't speaks
to their interest in amateur radio. Like the fellow pushing the broom
after the elephant in the circus saying, "What? And give up show
business?", many of the ARRL paid staff work there because it
involves them in something that they love.

That said, however, it would be to the benefit of the membership to
raise staff salaries to competitive levels. In the end you generally
get what you pay for. Competent and respected people expect to

be paid what they are worth. There are sure to be some who would have been of benefit to the ARRL who have passed by, or left, staff jobs there due to the low pay. They have to think of their families as well as their hobbies.

>>I recall reading once that ARRL has already suffered a near financial
>>failure.
>
>No. During the League's re-creation after WWI, they sold bonds to fund
>the publishing of QST. Once the League got into good financial shape,
>they were ready to buy back the bonds, but very few bond-holders cashed
>them in. Pretty neat, eh?

ARRL has also run a deficit in recent years. That's in the annual reports. There was a million dollar shortfall in 96 or 97. It is not a profitable operation (but of course it isn't intended to be). The image that the ARRL is a corporate fat cat is unfounded. In fact it is laughable. Its cash flow puts it squarely in the small business category, and its (lack of) profits would put it in the defunct small business category if it weren't a non-profit membership organization. Unlike the federal government, it can't run for long at a deficit. It is a management challenge to make sure it breaks even year to year.

>Plus we can use everything above 300 GHz.

Exactly, Bob. And the problem with awarding immediate HF privileges to
all 600,000+ hams is that our 3.75 MHz of HF has very little frequency
re-use, i.e., someone on 14030 kHz might mean no one else in the U.S.
could use that frequency. On the V/UHF bands, that's certainly not the
case, e.g., there are probably a dozen dozen 146.94 MHz repeaters across
the country - all could operate simultaneously.

>I think that is plenty of room. For the same reason, and others, I think that

I never had anything like this when I was busted...

I have a van pull up, with the accompanying US Marshall, as well as a local Sherrif (I was in county jurisdiction). They came in the house, first looked at all the equipment, deemed it legal (nothing said Galaxy or other brands (I ran a Tram)), then put a small external coupler on the coax (like an inductive wattmeter) and keyed the mic. It told them that I was transmitting at 5 watts output carrier. Due to the fact that at the time of the radio being in production it was common to have a wattmeter, as well as the manual saying that you could mis-tune it for more power (actually, you where tuning it correctly), they let me get away with that., with the stipulation that I cut the power down a watt.

The VFO was not unlocked. They did ask about the car batteries on the floor, but I explained that they where for my car stereo amplifier, which was tucked away behind the bench.

After they left, I took one of my MTX 15 inch subwoofers out of the box the radio equipment was on, pulled the amp and modulator (both 12 volt) out and put them back in line. The marshall told my neighbor that had complained that I was in compliance with the law, and if he pulled my antenna down again (it was laying on the ground) that he could be charged with criminal mischief.

Toll Free

Hi Tony - How about a full-wave loop, quarter wave-length (~135 feet)
per side? Is your property large enough? You mentioned that you do
have trees. Feed it with ladder-line and a balanced tuner, and you'll
have an all-band antenna!

(For comments from the pros, try rec.radio.amateur.antenna.)

73, Jeff KH6OO

P.S. Look for the book titled "The Challenge of 160!" written by
Si Dunn, W1BB.

I have two daughters that are ham radio operators that need a science fair project for their middle school science program.

If you have any ideas on what we could do with packet radio or two meters please let me know.

Thanks

Tune in to Inspector Morse on A&E Tuesday evenings - throughout the theme music at the end of the program you'll hear the violins tapping out M O R S E repeatedly - someone on a code oscillator begins and ends the theme song, with the violins doing the code during the rest of the song.

When CNN has a breaking news story, you'll hear the violins tapping out HI HI HI... in the theme music. (That must drive Burt crazy.)

3539. Richard Whiten: Racist, bigoted NAZI!

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-22 00:00:00 UTC
From: RG-58-U@webtv.net
Message-ID: <13585-36587C50-41@newsd-111.bryant.webtv.net>
Source record: 157393

How dare Richard Whiten make false claims regarding 3950, when he himself showed us all today what a horrible hate-monger he is!

At about 1 pm eastern this Sunday afternoon, Richard decided to verbally assault an African-American ham on 14.313. He used such phrases as: "jungle bunny" and "spear chucker". He also said he liked to take black women, turn them upside down, and use their heads "and all that kinky hair" as "Brillo pads to clean my pots and pans".

It was a totally disgusting display! The bright side is that TWO phone calls were made to the new FCC enforcement line and Rich made it their recorders, live, while he was doing it! Now we must all pray that an African-American FCC official gets ahold of the tape first thing on a Monday morning!

(And for those of you who will say that it's not against the rules to make racial slurs....you're right. But.....Rich also broke some other rules while making those slurs, and if I caught those violations, I'm sure a minority FCC official will also!)

Rich, you're a bastard!

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & GO LIST, N2JTX, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, KN4T, N4TO, WA5J, WC5P, K7CO, N9NC, WE9V, 4L5O, BA1DU, BA4TB, DF6EX, DJ5AV & DX News Letter, DU9RG, F6AJA & LNDX, G4BUE & DX News Sheet, HS0/G3NOM, OZ8AE, PS7AB, UA9CDC, UA0SJ, UN5PR, VE2NW, VE3XAP, VK4AAR and VU2DPI for the following DX information.

3A, MONACO. Tom, HA/N9NC, will operate SOAB in the CQWW CW Contest. The operation is planned to begin November 25th or 26th, closing immediately after the contest on December 1st. There will be some station testing activity on SSB and CW that will take place on 160-10 meters before the contest. Please QSL to OM2SA, Juraj Sipos, 930 13 Trhova Hradska 550, okr. Dunajska Streda, Slovakia. Please DO NOT QSL to N9NC's call book address. Questions/comments may be sent to: n9nc@westel900.net

3DA, SWAZILAND. The "DX News Sheet" reports that Jon, 3DA0CA is active on Fridays and Saturdays at 1900z on 1827 kHz for Europe. QSL via W4DR.

4L,GEORGIA. Omari, 4L5O, states that he will be active in the CQWW CW Contest as a low power Single OP/Single Band entry. Look for him on 3.5 MHz band. QSL ONLY via CBA. If anybody is interested in a contact with Omari, send a E-mail message to: 4l5o@caucasus.net

5V, TOGO. Remember to look for the Voodoo Contest Group to be active from here. Members G3ZEM, G4ZVJ and G3VMW plan to be active as 5V7ZM, 5V7VJ and 5V7SW. During the CQWW CW Contest they will use the callsign 5V7A. QSLs via homecalls. For more info, please refer to OPDX.273. The group will return to Ghana (9G) after the contest (December 1-6th).

6Y, JAMAICA. JT, K7CO will be active as K7CO/6Y5 now until December 1st. Activity will be on SSB only on 160-10 meters (including the WARC bands). Suggested frequencies are: 1872, 3872, 7272, 14172, 14272, 21272, 28472 and 50172 kHz (WARC freq. were not specified). E-mail can be sent to

him at: 6y5@vcr.com Also, a Web site is available for online logs and news at: http://www.vcr.com/6y5

8Q, MALDIVES. Igor, UA9CDC, reports that he and 5 other UA9 operators (UA9CDV, UA9CI, UA9CLB, UA9CKP and UA9CFF) are teaming up and are going to be active as 8Q7DV from Sun Island. Activity should have already started and will last until December 3rd. Operations will be on all bands plus an entry as a Multi/Single in the CQWW CW Contest. QSL via UA9CI.

9M8, EAST MALAYSIA. Hans, DF5UG, is attempting to operate from Pulau Satang (IOTA OC-165) Island off the coast of Kuching, Sarawak, as 9M8QQ. There are difficulties with permissions and access, so the operation is not certain. However, Hans is visiting the region and he will be trying to overcome these difficulties. If successful, he will aim to operate for two nights, November 24th and 25th.
Meanwhile, look for Japanese operators JH3GAH, JR3WXA and JE5FLM to be active as 9M8TG. Their activity will be mostly on 12, 17, 30, 80, 160 meters and RTTY before the CQWW CW Contest. Look for them during the contest as 9M8YY using 15 meters only. QSL via JH3GAH.

A2, BOTSWANA. Charlie, W0YG, is now signing A25/W0YG. He will continue to operate until about December 2nd. Activity will be on 40-10 meters. QSL A25/W0YG via home call.

AT, INDIA. Dilip, VU2DPI, reports that the Government of India announced that, up to December 31st, all the Indian Hams can use the "AT" prefix instead of the usual VU prefix. The special prefix can be used by all the Hams of India to commomorate the 75 years of Amateur Radio in India. Dilip gives the following example: VU2DPI will use the callsign as AT2DPI.

B1, CHINA. The Beijing DX Club will participate in a Multi-Multi operation during this upcoming CQWW CW Contest. They will set up two stations operating as B1Z on all bands from 160-10 meters. The operators will be BA1AA, BA1DU, BA1FB, BA1HAM and JA1BK. Other assistant members for this event will be BA1AJ, BA1KA and BG1CL.

BRAZILIAN ISLAND DXPEDITION. Look for ZV3A and ZV3C to be active December 12-13th, from Gua'ba Arch. (ed. Spelling is not current) DIB 73 (Not IOTA). Activity will be on SSB/CW and 20-40 meters. QSL via: Cx. Postal 2180, Porto Alegre/RS, 90001-970,Brasil, or Bureau.

C6, BAHAMAS. After signing C6A/N4RP for nearly two decades, Dick has just been granted the callsign C6AKP. He will air his new call for the first time during his operation from Bimini Island (IOTA NA-48) between November 20th and December 2nd, including a low-power all-band entry in the CQWW CW Contest. QSL C6AKP either direct to Dick's home QTH: (2805 Casita Way, Apartment 115, Delray Beach, FL, 33415) or via the W4 bureau.

CANCELLED OPERATION. Joergen, OZ8AE, informs us that his trip to Greenland from November 11th through December 2nd is now cancelled. He reports that he is in the hospital with severe pains in his back and hopes that the doctors will find out what is wrong.

CO, CUBA. Look for Ed, CO2MA, to use CO0CW in the CQWW CW Contest on 15 and 40 meters. QSL via P.O. Box 21056, Alamar, Havana 12500, Cuba.

F, TRISTAN ISLAND (France). Francis, F6HKS, will be active from this French island (counts only for the French Island Award DIFM as AT056) on December 21st from 1000-1600z if weather permitting, or on December 23rd same period.

FR/G, GLORIOSO. Zareh, VE2NW, received the following info from Jacques, FR5ZU, about his recent operation from Glorioso, as FR5ZU/G. He had trouble with his power supply unit. He was unable to use his transceiver, portable computer and camcorder. The logs ended up being taken on paper and will be forwarded to VE2NW as soon as he gets some free time. They are extremely busy right now with the Cyclone season. Jacques ended up using a battery from a tractor on Glorioso.

FR/T, TROMELIN. Henry, FR5ZQ, was reported active again as FR5ZQ/T during this past week. Activity was mainly SSB on 10 and 20 meters. Some 15 meters CW activity was reported. The length of his stay is unknown. QSL via home call.

FY, FRENCH GUIANA. The "DX News Sheet" reports that Dave, DJ0PJ, will be active again in December, but will QRT while in Germany for Christmas. He will also be active again in January as FY/DJ0PJ. Suggested CW (QRP) frequencies are: 14060, 21060 and 28060 kHz. QSL via home call.

HC8, GALAPAGOS. Ted, HC8K, reports that he will be leaving for a short DXpedition Tueday, November 24th. Activity will be mostly digital modes (RTTY/Pactor). There will also be a lot of 6 meters from a couple of Islands. The island of Santa Cruz will be activated first for a few days and then another island called Floreana Island. There will be two or three operators: HC8DH/Herbert, HC5AH/Jorge and HC5K/Ted; possibly HC3FD/ Fernando (NOT TOO SURE). The operation will take about 8 days with some interruptions during the travel and set-up. QSLs go direct to HC5K: P.O. BOX DX, CUENCA - ECUADOR, SOUTH AMERICA.

HP, PANAMA. The "DX News Letter" reports that DL2BAY and DL5XX will be on the air again as 3E1DX during the CQWW CW Contest. QSL via N0JT.

HS98, THAILAND (Special Event). The Radio Amateur Society of Thailand (RAST) has been asked to provide back-up support to the Communications Authority of Thailand (CAT) for Telecommunications during the 13th Asian Games, December 6-20th. A nation-wide network will be set up using HF (mainly 7060 Khz SSB) plus the 2 meters band, and packet for this purpose. The opening ceremony at the new Hua Mark Stadium on December 6th will be presided over by His Majesty King Bumipol (HS1A) who is also the Patron of RAST. A total of 43 countries will participate in the games. The special event callsign HS98AG will be used during the period to publicize the event. The QSL manager is HS1CKC.

LY60, LITHUANIA. There are about 20 LY stations active with the LY60 prefix to celebrate the 60th anniversary of the Lithuanian ARC (LRMD). Also active is LY60RMD the LRMD HQ station.

PALESTINE. The "DX News Sheet" states that John, K4MM, reports that Palestine was granted an international dialing code and an amateur radio callsign prefix block at the recent ITU Plenipotentiary Conference in Minnesota, USA, and could become a new entity when the callsign block is actually allocated.

QSL INFO AND NEWS.....
For those who have been asking, YES, logs are up on the WEB for the BQ9P operation at: http:www.qsl.net/bq9p

EX2M has a new QSL Manager. It has been reported that "due to 'irregularities' with the previous manager leading to rejection by DXCC" a new manager was appointed. Send QSLs to W3HNK for EX2M contacts. His address is: Joseph L Arcure Jr, POB 73, Edgemont, PA 19028, USA.

JUST ANOTHER REMINDER. HH2HM/F is not the QSL Manager for BA4TB. The correct manager is 9A2AJ. 9A2AJ is the QSL Manager for BG4TBD, BD4TB and BA4TB. QSL direct or via bureau (Tomislav Polak, P.P., 34551 LIPIK, Croatia).

FM5GU and FM5GU/I QSL cards are to be QSLed via WA4JTK, direct only. FM5GU reports to OPDX that WA4JTK does not accept bureau cards.

Effective the 1st of December, QSL Manager Alan, VK4AAR, will have a new mailing address of: Alan Roocroft, PO Box 421, Gatton, QLD 4343, Australia. QSL direct only to this new address for a FAST turnaround for the following stations: V63PD, VK8AN, VK8AN/6, VK8MI, YJ8AA, ZK2JJ, ZK2PJ and VI0ANARE (but **NOT** VK0ANARE). If anyone has sent to his old Dalveen address, it will reach him OK, so do not re-QSL, but please use the new address for all future correspondence.

Robin, DU9RG, has informed OPDX that he is no longer the QSL Manager for 4G50N. The cards for this contact can be sent via the bureaau. All cards sent to him direct or via the bureau will be forwarded to the station in Naga City. Robin states he is not able to send out cards directly from his end as he has not received all the logs from the station. He has only the logs for the contacts made during the first week of operation (January, 1998). For those who have already sent the cards through him, there is no need to send another QSL as all cards, IRCs, green stamps, and SASEs have been sent to Naga City. He suggests to be patient.

SPECIAL PREFIXES. As reported by Radio Amateurs of Canada (RAC) from their Web site: "To commemorate the 75th anniversary of the first two-way trans-Atlantic exchange between Amateur Radio Operators, the Industry Canada (Canada's FCC) has authorized the use of the following special callsign prefixes from December 1st to December 31st (normal prefix/special prefix): VE1 to CG1, VE2/CG2, VA2/CF2, VE3/CG3, VA3/CF3, VE4/CG4, VE5/CG5, VE6/CG6, VE7/CG7, VE8/CG8, VE9/CG9, VO1/CJ1, VO2/CJ2, VY1/CK1 and VY2/CK2." "Help take note of a very special event in the history of International Amateur Radio, and work one of these prefixes...73" de Eddy, VE3CUI

T30/T31/T32/T33 NEWS (DL1VU trip). This information is courtesy of Tuck, KH6DFW (T32BI). Tuck has a daily schedule with Phil, T32O, who currently has DL1VU and DJ5IW (T32VU and T32IW) as guests at his QTH. Phil reports that Karl, DL1VU, will not be going to T31 (Canton Island) as previously announced due to transportation problems. The ship was already booked full except for deck passage, which Karl declined. He will instead go to Tarawa (T30) and then on to Banaba Island (T33). He has confirmed transportation arranged to Banaba. The ship will proceed from Christmas Island to Tarawa via Washington and Fanning Islands. It is unknown if he will be able to operate from those IOTAs. A detour of this ship to Canton would have cost an additional 1500 USD, which Karl declined. The other operator, Gert, DJ5IW (T32IW), will remain at Christmas Island until the first part of December, when he will return to Germany. Phil does not have the exact dates at this time for Karl to be on Tarawa or Banaba.

TM, FRANCE. The LNDX reports to look for Jean Yves, F5HWB, to activate the special event station TM8UN for the French National Association for the Disabled from November 28th through December 6th. QSL via F5HWB.

UA0, ASIATIC RUSSIA. Look for Yuri, UA0SJ, to be active in the CQWW CW Contest 1998 from Zone 18 as a Single Op/All Band (100 watt) entry. Please send QSLs for the contest and all QSOs direct only via: Yuri A. Maltsev, P.O. Box 2304, Bratsk, 665700, Russia

UP5/UP6, KAZAKHSTAN. Look for Yuri, UN6P, to be in the CQWW CW Contest as UP6P as Single Op/All bands entry. This callsign will also be used by him in other future contests. Also, Romeo, UN5PR, will be using the callsign UP5P in some future contests (but not in CQWW CW Contest). QSL for UP6P and UP5P are to be sent via UN5PR: Romeo Y. Loparev, P.O.Box 73, Temirtau, 472300, Rep. of Kazakhstan.

V85, PULAU MUARA BESAR (Brunei). By the time you read this V85QQ will be QRT. Activity from IOTA OC-184 was by Hans, DF5UG, (assisted by Gary, V8GTW). QSL to DF5UG. LAST MINUTE UPDATE/WRAP-UP: Hans became active at 1200z November 20th. On arrival at the Island, he found it deserted. Previously, a few people had been living there. Luckily he had planned to be self-contained (Robinson Crusoe Style). He set up the station under an unused wooden shelter, and installed the vertical antenna supported by a bamboo pole on top of an old water tank tower. He has two 70 AH Car Batteries to drive the rig loaned by Gary, V8GTW. He plans to use one each night. He had food and water prepared for just two nights. He had to cocoon himself in the shelter with a mosquito net. Hans took a 2m rig with him hoping to keep in touch with mainland Brunei via the Saba Repeater. He can hear the repeater, but his transmitter failed. So, all contacts were via HF. "This is the picture behind the callsign HI" 73 de Ray, HS0/G3NOM. (ed. GEEE! The things we crazy DXers do to put a new one on the air!)

VP5, TURKS & CAICOS ISLANDS. Vic, N4TO, is currently on Middle Caicos and will be there until December 2nd. Before and after the CQWW CW Contest he will use the callsign VP5/N4TO and will be active on all bands 160-10 meters including the WARC bands. Operation will be primarily CW. Vic mentions that he may also operate on 6 meters if an antenna is available.

During CQWW Contest look for him to operate as VP5M. QSLs for VP5/N4TO
and VP5M should be sent via N4TO.

WE STAND CORRECTED! In last week's bulletin, OPDX.383, under "IMPORTANT NOTICE AND REMINDER!", should have read ..... "the U.S. Postal Service will increase their rate effective January 10, 1999, from 32 to 33 cents" (not January 1st). The actual announcement dated October 13th is as follows (TNX WE9V): FOR IMMEDIATE RELEASE
Stamp News Release Number 98-113
USPS Web site http://www.usps.com

POSTAL SERVICE TO ISSUE RATE CHANGE STAMPS
"H" STAMP FEATURES UNCLE SAM HAT

WASHINGTON. Non-denominated "H" stamps will go on sale at post offices nationwide beginning November 9. The stamps are being issued to support new postage rates effective January 10, 1999.

XZ, MYANMAR. If you are not an OPDX InterNet Subscriber, you missed the special announcement/bulletin which stated that the Central Arizona DX Association and members of the XZ1N have extended their operating date to December 14th (not the 6th as first announced). The first group of operators have arrived and have began setting things up while doing some operating. The second group of operators will arrive on November 27th, just in time for the CQWW Contest. Dick, N6FF, reports that the "XZ1N is still in the process of putting up antennas. The 80M vertical should be up shortly. The 160M station is up and running. They made about 15 QSOs on 160M last night. Even with the beverage antennas they have considerable noise. They will be there for almost 3 weeks, so everyone who needs them should have an opportunity." QSL via W1XT. The XZ1N WEB site can be found at: http://ng7m.qrq.com/~xz1n

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 440-237-8208 28.8k/14400/9600/2400/1200 and leave a message with the Sysop or send via InterNet Mail to: kb8nw@barf80.nshore.org
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 440-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Howdy,

We are looking into replacing our Pageboy IIs and going over to the Kantronics 9612 with alphanumeric capability. Is this a good idea? We would probably stay with the pageboy IIs if we could find any to replace the ones that have fallen apart. Could you share the experiences you have had in setting up and running a system like this.

Thank you,

Max Lindholm, KK7HI

Good question! If you all recall, Rich's defense against his $10,500 fine was his fight against the bigotry and racism that was occuring on 14.313 at the time of his violation. Now that Rich Whiten's true racist colors have shown through, the FCC just might feel obligated to re-instate that $10,500 fine. And I think we all should do our part to contact the FCC, and make sure they follow through in this matter.

Does anyone out there have a transmit mod for the HR 2600 to get it to be able to receive on the 11 Meter (CB_ Band). I remember seeing one once, but haven't been able to find one on a web search.
Please reply to email.
NF

======

That depends on which cpu your HR-2600 has in it.
Uniden made several different chips, some are expansion capable while others are not. The earliest versions had a UC-1201 which will do it all.
Others had UC-1246's, UC-1250's, UC-1250A's and UC-1251's through which progression had increasingly limited capabilities.
The ultimate solution is an aftermarket CPU called a Chipswitch�.
These allow capabitities much more inline with modern ham radios, such as selectable memory banks, repeater offsets and scanning.
I happen to have chip serial number #000083 in my HR-2600, which allows me to cover the entire 10-15 meter bands.
(The later version of the Chipswitch only allow coverage from 10-12m)
There was once a freeband group appropriatly named the "HR-2510 Radio Group" which had available all kinds of mods for this family of radios, including the HR-2830 and President Lincoln models. However, the group seems to have disappeard several years ago.....

Anyone who takes this hobby so seriously that they can't even tell when a person posts a sarcastic article, and they create a long thread debating the aforementioned article needs to take a valium.

No one cares about alt.law-enforcement. As far as I am concerned, most police officers in this day and age are nothing but idiots with guns who can't keep their nose out of other people's business. Gone are the days when police where there to protect people. Now they must go out into the community and drum up business for themselves by prying into any aspect of the public's privacy for any tidbit they can find.

If you defend that type of practice, then you must be a pig lover. Go play with your little gun toting, donut eating, pole smoking pig friends.

Has any one have any experiences with a Heath Kit SB220?
I think it runs 2- 500Z tubes.
What is the expected ouput supposed to be?
Is it any good?
Is this a clean amp?
What is the going price on these units?
Any information is appreciated.
Thanks

What signals are available at the "antenna tuner" connector
(the 4 pin longish molex plug) on the 706MKII. This is the only
connector not really covered in the manual.

Reason I ask - I was wondering if might be useable
in conjunction with other tuners, etc.

Pleae email me directly

Thanks

Source record: 157441

The SB-220 is a very good amp. The 3-500z tubes are good tube
and will give you years of good output. Depending on the plate voltage
+ or - 2300 v, you should get about 1350 watts out in a Bird Watt
Meter. For a good clean one about $600 is a good fair price,
concidering Heath stop making them back in 1982 give or take a year.

I bought one and built it and it work like a champ. Watch your ALC!
The tubes will give a nice orange/red glow.

You can run about 1 kw rtty/cw no problem. I changed and modified the
volage doubler, and got the output to legal limit.

Probably not enough. They're the only folks who've tirelessly fought for the continued existance of amateur radio for the last 80+ years. Without 'em there would be no ham radio hobby today.

>I have
>never once seen it posted in QST, or any other place for that matter.

That's okay, I've never seen your salary published in QST, either.

>Think about that and how its going to affect Amateur Radio more than it
>already has.

What? That your salary has never been published in QST?

>I recall reading once that ARRL has already suffered a near financial
>failure.

No. During the League's re-creation after WWI, they sold bonds to fund the publishing of QST. Once the League got into good financial shape, they were ready to buy back the bonds, but very few bond-holders cashed them in. Pretty neat, eh?

My best guess is that she would say it's proper to respond to each
individual that you received help from.

I'd also suspect she'd accuse Burt Fisher of being a crass, outlandish
boor for:

1. Posting unasked for advice to adults in a public newsgroup (he
forgets he's _not_ an authority figure once he leaves the school
grounds)

2. Trying to correct or humiliate an _individual_ for his actions in a
public newsgroup. If "propriety" is Burt's forte he should inform the
person _privately_.

I think she'd find Burt's sins _far_ greater than the person that
responded with a "thanks to all" message.

Totally false.
The reason kids are dumbed down lies mostly at the foot of parents.
The parent rarely blames their child for an "F."
Consistantly single parent homes have far lower grades among their children.
Teachers do not cause divorce or unwanted pregnancy.
However students of hams do better.

In a message dated 98-11-19 03:06:33 EST, "John" <mstr-jl@swbell.net> wrote:

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
The ARRL is trying to bring new people into the hobby, which they have been trying to do for the last thirty years, and they've succeeded (maybe too well) with the no code tech license, and now, the coming revisions to a/b/c license...

I'm all for more hams - I like most of the hams I've met, but there has to be more spectrum space for all us to operate - in some area of some bands we're stepping on each others toes now. Double or triple the number of hams licensed to operate there, and...I hate to think of the possibilities...
>>

I think that part of the problem here is that people are jammed into one or two bands (2m and 70cm), and ignoring the others. No-Codes (and the rest of us, for that matter) have literally more elbow room than they could ever possibly use.

Let's forget about HF for a second. There is 23122 MHz (that's 23.122 GHz) of ham bands between 50 MHz and 250 GHz. If they were to open up all HF privileges to anyone that can recite Ohm's Law and knows the CW character for the letter *e*, that would give them a total of 3.75 MHz more bandwidth. That is less than 17/1000th of 1% more than what is available above 50 mHz. Plus we can use everything above 300 GHz.

I think that is plenty of room. For the same reason, and others, I think that the licensing should be left the way it is now.

Yes you can it is available from R T Systems who authored the ADMS
software. It consists of an adapter for the older 3 connector cable to
the newer 4 connector cable as well as new software. They get $20 + $6
shipping for the upgrade. The new software will easily import files
from your previous HT I transfer data between my FT-51 and VX-1 files
seamlessly.

Jim Wardrip wrote in message
<25143-36583EC6-3@newsd-152.iap.bryant.webtv.net>...
After listening to 75 and 20 meters and being exposed the stupidity of
some posters on this news group, I agree that there needs to be a
restructuring of the amateur license classes.

First, since everyone buys their rigs to support te economy of Japan and
Southeast Asia, we can drop the theory and electronics part of the test;
to be replaced with questions such as:

Your new radio requires 120 V. a.c. to operate. You have both 120 V, and
240V sockets in your wall. How do you know which to use:
.
(a) The 240 one looks funny. .
(b) The plug won't fit the wrong one. .
(c) Give me a hammer and I'll make the damn . thing fit.

If there are any operators this year, here's the plan:

"CQ Bonfire" Special Event November 24, 1998

Freqs: 7285 kHz lsb
14250 kHz usb
18150 kHz usb
21350 kHz usb
24950 kHz usb
28450 kHz usb
29600 kHz fm

Not much support this year so don't be surprised if you don't hear us.
If anyone will be up there, it will be most likely between 10am and 6pm
central time.

Additional Bonfire Info

88th burning of bonfire.
90th bonfire built (not burned in 1963 after JFK assassination and one
rebuilt in 1994)

Symbolizes the Aggie's burning desire to beat the hell outta t.u.

Bonfire will be shown live locally on KAMU Channel 15 at 8pm.
KAMU will replay on Friday from 9-10am.
Will be shown in the Southwest US live on Fox Sports Southwest at 8pm
central.
Fox Sports Southwest will replay on Thursday from 11a-12noon and Friday
9-10am.
Bonfire is scheduled to begin burning at 8:18pm central.
Check out these sites for more info about bonfire.
http://bonfire.tamu.edu
http://kamu-tv.org/bonfire98/

Football game is Friday Nov.27th, 10am central time. Will be shown on
ABC-TV.

W5AC Texas A&M amateur radio club http://w5ac.tamu.edu
QSL: TAMU ARC
PO Pox J-1
College Station TX 77844

To receive certificate, send 8 1/2 x 11 inch envelope with RETURN
postage.

I'm not upset, I was simply pointing out the double standard you seem to base your posts on. You seem to feel it's just fine for you to post your anti-ham spam over and over while at the same time calling someone's hand for posting a thank you note and asking how many times poor Burt will be forced to read this kind of post. Amazing to watch you hurl insults toward a teen ham making a comment on his desire to upgrade while you boast about your credentials as an educator.

As others will tell you , It depends on the radio. If it is an older ham rig or comercial transciever that normally has a crystal controlled receiver and transmitter you may be able to do it. The receiver and ransmitter has to be two seperate pieces. I have converted a GE Mastr II mobile unit with no problems. Also an older Clegg FM-76 220 MHz unit. That was a little harder as some of the circuits for both sections were on one circuit board.

The worth the effort will have to be determimed by you . Outside of the controller, duplexer and antenna, you will not have too much trouble with the radio part of the conversion if the correct transceivers are picked. Do not try to convert most of the modern rigs as there is too much interconnected stuff on the boards and some of the receive and transmitt circuits are in use at the same time.. Well maybe need to be used at the same time and you can not do that.

An additional note Don, if your still in the learning stages but have an interest in VHF or UHF communications I highly reccomend building a kit. Look in QST or 73, if you can spring for the hundred bucks or so there is a company called Hamtronics I believe that makes reciever and transmitter kits designed for this type of service, or try one of the Ten Tec 6m or 2m trancievers. I only wish I had built more when I was a Novice 20 years ago, it will increase your knowlege of radio and how things work at an exponential rate! IMHO...

3615. WHY ARE "ANTI-HAMS" HERE?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-23 00:00:00 UTC
From: KD5FJE@webtv.net
Message-ID: <20702-365A47CF-15@newsd-133.iap.bryant.webtv.net>
Source record: 157278

Why do those who hate ham radio and hams as people and who have sold their equipment and demonstrate so much hate in here even posting here??!! Get a life. A well-known poster here talks about hams sitting 'round all day by their radios saying"...rig is...QTH is..." etc, yet all he does is sit in front of the internet all day and post cynical anti-ham dogma. Talk about no life. It s the ultimate in hypocrisy to waste time on the internet posting junk in newsgroups yet at the same time blast hams for doing what they enjoy. I have many interests, the least time with which is spent on ham radio (even though I enjoy it). I spent very little for my equipment and antennas were built myself. Not all hams neglect, beat and otherwise ignore their families as is stated and implied in no uncertain terms by this person. And leave it to him to think everyone who believes in the Second Amendment or who carried a gun (including myself, an ex police veteran) has a problem with their manly endowment. (You've been reading to much Freud there guy...personally I think you are projecting your own feelings about yourself on others). A juvenile statement to say the least. I sense a deeply disturbed person here and in a way, I feel sorry for him and wish he'd get help for his unhappiness and cynicism and learn to enjoy life and not give a rat's behind what others do with their hobbies. I think that every post this person makes from now on should be totally IGNORED by all and maybe he will find any minimal therapeutic value in stirring the pot has diminished to the point that he might even be tempted to seek professional help for his depressive state and learn to enjoy life.............And don't worry there guy, if you flame me (as you already have), you won't get a response from me, because I could care less what you think, I will, however, have pity for your miserable state of mind. Hey if it makes you feel better, keep up the garbage...but you'll never get better using "internet therapy". You need a professional...the sooner the better.
The name of this person has been withheld..but you watch...he won't be able to help himself....he'll let everybody know who he is when he flames my post...
All the best, and hey guy, try smiling, it feels good! :-)

Back "in line" where?

Are you trying to imply that you used a car stereo amplifier (20Hz-
20Khz) to amplify your CB's (27Mhz) power output?

Im still in the learning stages, so please no sarcastic answers.
Can a Transceiver radio be modified to serve as a full repeater.
(transmiter & receiver)
or in simple terms, can it be modified to recieve & transmit at the same
time??????
Is it worth the effort to do this???

Sounds like he is implying that the CB amp was hidden in a box that
the police didn't look in, thus exposing his poor neighbors to quite a
few more watts then the legal 4...Must have been alot more if they
came over and tore his antenna down!

That their names appear in so many of the League's technical publications and technical articles, and that the League's Handbook (written by staff members) was the greatest selling technical publication for decades should leave no doubt in your mind that those folks are highly qualified.

The U.S. State Department has never questioned their qualifications, for a League official has always been invited to be a U.S. delegation member at every international radio conference.

Next time you're in CT, stop by their HQ; just looking at their lab should ease your worries as to their qualifications.

This is because criminals have the guns, and the victims (due to restrictive
firearm ownership laws which criminals don't obey in the first place) are
usually unarmed.

Have you heard Rich's excuse for his actions? He says that because N9GOR made a comment about white women, he was justified in making his racsit, bigoted and hateful comments! Do two wrongs make a right, Rich?? You know, if you had dropped it after the comment about the kinky hair being a Brillo Pad, you might have gotten away with it. But when you continued on, and used such phrases as "jungle bunny", "nigger", "spear chucker", etc., it showed us ALL that you ARE a RACIST. But I knew that YEARS ago after I heard you tell a racist joke on 14313.

I did the same thing. I sold basically everything except ICOM 706.
I still have two CB radios which one of them is capable of SSB. Best
offer.

For Sale: 2M (50 watt) Linear Amplifier and pre-amp

This amp is just over one year old and is in excellent condition. The current list price for the amp is $119.95 at AES (which is where I bought it). I am willing to sell the amp for $70 or best reasonable offer. I got my amateur radio license a while back and have just gotten out of the hobby for one reason or another. Please let me know if you have any questions or are interested. I'd be more than happy to answer any questions you may have. Please feel free to e-mail me at: mnicolia@greenapple.com

Model: MH-A103 (Maha)

This amp is designed for use with any VHF band handheld or mobile transeiver with an RF output power rating of 2.5 to 5 watts to increase it's output to a nominal 50 watts and has a built-in GaAs FET receiver pre-amp.

Features
----
* 50 watt output with 2.5-5 watt input
* Low noise pre-amp
* Dual Mode (FM & SSB)
* SWR protection circuit
* Reverse DC power polarity protection

Specs

Frequency range: 144-148 MHz
Modes: SSB/FM
Input: 2.5-5 watts
Output: 50 watts
Receiver gain: 18 dB
Impedance: 50 Ohms
Connectors: Type M (SO-238)
DC Input: 13.8 Volts
Current Drain: 8 Amps (max)
Dimensions: 5.3" (W) x 1.7" (H) x 6.3" (D)
Weight: 2 lbs

There is more information about this product at:

http://www.maha-comm.com/products/poweramps/mh-a103.htm

Please contact me if interested (mnicolia@greenapple.com).

Conections in order:

Radio electrical ground - volts
Radio DC hot + volts
Output to activate tuner
Keys the radio

Contact Gary Fibre at Icom for details I made the Alinco tuner work
using the above and some slight tuner mods.

They are good amps. If you look around you can find them as low as $400.
There are only a couple of things that could be consider bad about the amp.
First, there is no stand-by switch. Second, the power supply is lacking a
little. Not sure if it was sold as a 2KW amp or not. It won't produce that
much pwr. If you are into modifications there are some people on the web that
sell kits. These kits are for things like, stand-by switch, slow tube turn
on.... and a couple of others. I have had three of the amps and really like
them. The one that I have right now has had the HV supply removed. The HV is
in its own chassis and really keeps the HV up where it is suppose to be,
unlike the stock supply. If you replace the tranformer and beef up the caps
it will get pretty close to legal output. Good luck.....Mike/KD9RG

Hi Tom

Icom IC-706 to AH-3 Auto-Antenna Tuner, control connections:

1. TKEY: low if the tuner is not connected,
the <TUNE> button is not functional; high
Rear panel view: if the tuner is connected. On receiving
a TSTR signal, the tuner may assert TKEY
1 2 3 4 low to key the transmitter.
_____ 2. TSTR: normally high; pulses low twice
/ | when the <TUNE> button is pushed and held
< O O O O | for 2 seconds to start the tuner; pulses
_____| low once when the <TUNE> button is pushed
momentarily to stop or bypass the tuner.
3. +13.8V @4A: switched by <POWER> button.
4. 0V: chassis GND.

Best Wishes

[lots more snipped]

Sounds like creative writing to me.

When it gets to the point that the US Marshal shows up,
warrant in hand, it is not for the purpose of testing
equipment, it is for the purpose of SEIZING the equipment
set forth on the face of the warrant. The inclusion of the
local law enforcement folks is pure courtesy - they do not
have to be there - and the function of the FCC agents is to
point out to the Deputy Marshals what equipment to seize.

The US Attorney, acting for the FCC, will not seek a warrant
from the U S District Court, nor will the Magistrate Judge sign
such a warrant, unless the FCC affidavit establishes reasonable
cause to believe that unauthorized equipment is being used/stored/sold
on the premises.

If, after arrival on scene. the seizable equipment is not in
plain sight, the "target" will be given ONE polite chance to
produce it. Otherwise, pursuant to the warrant, which is a
court order, the Marshals have full authority of the court to
search in every part of the premisies, opening drawers, boxes,
and other such places where such items may be hidden. It is
not unheard of for the Deputy Marshals to start ripping open
walls if they, the experts in finding hidden goods, feel that
it could be there. The occupant(s) of the premises will be
detained in one place while the search team goes room to room
making a thorough search. As we used to say: "if it moves we

shoot". FCC personnel are instructed specifically not to make the same sort of tests (power, frequency, etc) which would be made during a voluntary inspection.

How do I know the above? For over 25 years I was the Asset Seizure and Forfeiture specialist for FCC field operations, wrote and/or reviewed and approved all applications for warrants, and served as the on-scene supervisor in quite a number of such cases. We trained the Marshal Service in what to look for.

Good try.....

> 3 watts.

The ones I was talking about are not like that at
all. Most of them have 2 to 4 sweep tubes in them.

But I also have one of the ones like you are
describing. It was sold by Allied Radio in the
late 60's and would take a 100MW walkie-talkie and
bost it up to 3 to 5 watts dead key peaking at 50
watts.

The Brand name was Lincoln, but I can't remember
the model number.

Black cat must have copied the design and called
it their JB-12 amplifier.

It's plenty worth it if you have a radio such as a GE Master II. They
modify really easily. And they work VERY well.
The smaller compact under dash radios, like Motorola Maxtracs are definately
not worth the effort.

> Is it worth the effort to do this???

Hi Don:

Yes, some can and some cant. Unless I'm mistaken the true definition of a tranciever is that is shares the IF for both transmit and recieve in which case it's a little more difficult to separate them. Many of the older commercial VHF/UHF rigs actually had a completly separate transmitter strip and reciever strip in one box making it in reality a TX/RX pair but of course referred to as a tranciever. There are quite a number of repeaters using this very sheme, take one tranciever apart, split it, xtal it up for the appropriate frequencies and then add a controller, duplexer etc. Sure you could modify it to run as a repeater and probably keep it in the same box. Remember the key to being able to transmit and recieve in the same band at the same time lies in how well you can tune the reciever so that it only hears the recieve freq and not the transmitter 600KHz away. This is why duplexers are used, they basically provide the reciever with a very very sharp front end allowing only the desired freq to pass and filtering the rest. Think about trying to hear your buddy on 146.52 a mile away on a rubber duck and there is a guy 10ft away transmitting with 100 watts a few kilohertz down the band, your poor reciever doesn't stand a chance without the help of a good filter notching out the 100 watt transmitter. It's like trying to see a lit match in front an automobile headlight.

Worth the effort?, that one is your call. It can be a lot of fun to build a repeater from scratch by doing what your describing but it IS a lot of work not too long ago it was the only way to build a repeater, no one had them off the shelf as they do today.

You could also show the effects of metal on radio waves by doing simple shielding experiments running very low power, like the poor mans direction finding by putting one HT in a tube with aluminum foil and using your body as a shield/reflector.

If the rigs have S meters take one outside the building, again with some attinuation (mabye just remove the rubber duck) and have one person move a few inches at a time while you log the S meter reading from a fixed transmitter you should be able to show null points that repeat due to wavelength? me thinks.

The answer is a definate Yes and No. It depends on the transceiver. Many ham repeaters are made from old commercial transceivers. Examples are GE Mastr II, Motorola Mitrek, Motorola Micor etc. Most ham transceivers are not modifiable this way.

Remember that once you are done modifying the radio you only have the easiest and cheapest part of a repeater. You then need to add duplexor, power supply, battery backup, feedline, antenna, and last but not least the site (which is the most important part of all!).

Hello All,
I am around electric vehicals when they are being serviced on a
regular basis and have noticed that the higher rated quality batteries
are heavier, I have applied this knowledge when buying alkaline
batteries for my Pro-51. I have found this to be correct when I
noticed the heaviest of the AA's to be the house brand at Pic N' Save
stores. At 89 cents for four they seem to outlast even the duracells.
'Just my observation....

Cheap Solution: Get an Auto equalizer with a 40w amp built in. $15.00 at flea markets. (Don't believe the 40W rating. it only does that w/ 42,000,000,000 % Distortion)

Good solution: Cruise the want ads for Good quality Mixing & Equalizing setups. Can use the Line level inputs w/ slight modification for your Microphone Audio.

Either way that you go, get back to me for the connections or Mods... Correct connections are a Must. Along w/ GREAT Quality Cables. If unit had Gold connections, use Gold plated cable connectors, if plain, use plain. Saves the hassle of trying to get all the squeaks & Squeals out of the system

If, for a quarter of a century, you rode herd on that type
of operation, sounds like you would have been good
candidates for utilization of unnecessary force, given the
situaiton, as well as possible violation of certain
individual rights ... "if it moves, we shoot" ... sounds
like a bunch of juvenile, hormone-popping cowboys ...
doesn't do much for the image of the FCC or the marshal's
service ...

... now I know you're gonna tell me some of that was really
necessary in reality, which was probably true in a few cases
... so, some details might be in order to put such "effort"
into its proper perspective, given the times and tendencies
... otherwise, about that "creative writing" .... ;0)

Hello all,
I'll trade a 486 persaio 924 computer for a good working Kenwood HF rig (TS 430, 830, 530, 140, 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte harddrive, keyboard and mouse. I will also through in a ICOM 27 2 meter rig with tone board and tone mic, and a KPC 2 TNC. I'm looking for another HF rig for 160 meters. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.
73 and thanks for reading,
Oris

Hello
I have a ICOM 740 with built in power supply that I would like to trade
for a Kenwood HF rig TS 440/AT, TS 830, TS 530 or a Heathkit SB 220 amp.
I have the hand mic and operation manuel. It is a 8 on a scale of 1 to
10. If you are interested drop me a note at
oris@dirtball.com.
Thankyou
Oris

And this goes back to the same thing...

Who the hell are you? I have been a member of this newsgroup for well over
a year, took a month long hiatis, and come back to a couple morons telling
me that I am full of shit.

If Phil, and now you, are who you say you are, then you would be able to
answer this question.

I rest my case until then.

So does Texas. Unfortunately, reciprocity extends only to neighboring
states, not to/from AZ.

3673. What is an Icom - 751 worth?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-24 00:00:00 UTC
From: Ed Kriston <n3wja@toad.net>
Message-ID: <MeA62.1619$V34.10130225@news-read1.qis.net>
Source record: 157213

I just received an SK Icom IC-751 with the following:

Icom IC-751 w/optional AC modification installed and FL-44A SSB filter
Icom SM-8 desk mic w/additional cable for second
radio, box & instructions
Copy of the operator's manual
Condition on scale of 1-10.....9+ it is very clean
I have the radio and I think the family still has
the original box.

I have seen a couple of these on here with prices at what I consider both ends of the spectrum. I would like to get the family a decent deal on this radio. What do you consider a fair price for this with the listed options? I figure I am gonna get some real interesting answers on this one.What is the difference between a IC-751 and IC-751A? I think it's the AC power supply.

Brett,

How about a demonstration of Slow scan TV (SSTV)? If you don't have a dedicated SSTV interface there are shareware programs that encode/decode SSTV using just a Windows sound card - you'd need to add a digital camera for input. Of course, you could also spring for a Kenwood Visual communicator (and charge it off to the project <g>).

I'm sure the kids would get a kick seeing their pictures from afar.

Mark

3675. Kenwood Repairs

Newsgroup: rec.radio.amateur.misc

From: Jim <jr2@usaor.nett>
Message-ID: <365B0AE8.62F@usaor.nett>
Source record: 157215
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.misc

Is there a qualified shop that repairs Kenwood radios?

I have a Kenwood TR-9000 all mode two meter rig that needs a chip replaced, so says Kenwood. Kenwood told me they no longer support this model. They could have told me that on the telephone.

Any assistance would be appreciated.

Jim, N3BRS

3676. Icom IC-746 vs. Yaesu FT-847

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-24 00:00:00 UTC
From: stormhnd@sound.net
Message-ID: <73epqfuit1@nnrp1.dejanews.com>
Source record: 157216

I've been looking at all the new rigs out there, and am really curious about whether anyone's got any opinions comparing the two above. I've read the product reviews from ARRL, I've gone back and looked at some dejanews articles, and I'm still undecided which would serve me better. If anyone would care to offer opinions, I'm listening. And if anyone has any information like relative failure rates of rigs of the two manufacturers, or average cost of repairs, or return/lemon rate, I'm most definitely listening.

>(transmiter & receiver)
>or in simple terms, can it be modified to recieve & transmit at the same
>time??????
> Is it worth the effort to do this???

Some can, some can't. It depends primarily on how the local oscillators
are generated. Things like the Motorola Micor and GE Mastr II (that's
the way GE spelled it) use separate crystal oscillators for transmit and
receive. It is a simple matter to split these radios so that they can serve
as a repeater. In fact, the majority of amateur repeaters are probably made
from one or the other of those two radios, or varients like the Exec II or MVP.
These are available surplus at very reasonable prices (they were originally
used in Land Mobile service as trunk mounted mobile radios).

Many synthesized amateur transceivers only have one synthesizer.
That's switched back and forth for transmit and receive (the receive LO
has to be offset by the intermediate frequency of the receiver, usually
10.7 MHz). These radios can't be split for repeater operation unless
you somehow outboard another LO. (And you may still have isolation
problems with most ham rigs.)

Some dualbanders have dual in-band receive capability, and that
requires two synthesizers. These can probably be split, but typical
ham transceivers have such poor front ends (poor IMD response
because hams seemingly want them to cover DC to daylight) that it
isn't worth the effort to try to split them to form a repeater. You want
a good tight strong receiver for a repeater. The Micor, and especially
the Mastr II, have that, most ham rigs don't.

Note, most of the "true" dualbanders can be used for crossband
repeater service (at reduced power). That doesn't put as much
demand on isolation between transmitter and receiver as does
in-band repeating. But for a conventional in-band repeater, you
need something better.

Exec II and MVP radios go for about $50, and a Mastr II will
command about $100 (you don't need the control head or cabling
to use them as repeaters). The Mastr II will loaf along at 50 watts
(rated at 110 watts for mobile service, but you want to turn it down
for repeater duty), and the receiver is really bulletproof. There are
a lot of these radios still around, though they haven't been produced
for a while now. They seem to last forever. Our repeater group has

6 repeaters using them now, and we almost never have to go to the repeater sites to adjust or repair them. They just keep going like the Energizer Bunny.

As a final note, I wouldn't recomend trying to use a synthesized radio as a repeater in any event (even a pair of synthesized radios) because the phase noise of the synthesizers will give you fits with desense problems. Stick with crystal control for repeaters. (Some late model commercial repeaters are synthesized, but the designers took great pains to control phase noise in them. Most ham equipment designers don't.) The RF fields at typical repeater sites are *intense*. You need a very strong receiver to deal with them. These old Motorola and GE radios have that, late model ham gear doesn't.

Oris,
I would like very much to do the trade with you but I would require an additional $300 from you because your computer is very outdated and your IC 27 is a very old outdated rig. I have a Kenwood TS 530 which is basically in good shape except that it has been dropped several times and most or all of the panel controls are either bent or broken but I'm sure they can be replaced. All the sides and corners are dented but this doesn't seem to affect its performance but its hard to tell since it doesn't exactly seem to work right now. It's possible that one or more of the many beverages that have been spilled into the interior have caused this but I'm sure a good cleanup and drying out will put all back in shape again. I think we should both ship to each other on the same day. Do you agree?

> If, for a quarter of a century, you rode herd on that type
> of operation,

I rode herd on the FCC's portion, which was to supervise the gathering of evidence, examining the case for sufficiency and conformity with procedural requirements, preparing the complaint and warrant, presenting it to the US Attorney and the judge, delivering it to the Marshal Service for execution, and assisting them in the identification of equipment to be seized.

> sounds like you would have been good
> candidates for utilization of unnecessary force, given the
> situaiton, as well as possible violation of certain
> individual rights ...

For the record, in the memorable words of Judge Sam Conti who first formulated it, the search warrants (which were executed by the Marshal Service, NOT by the FCC) all said "using force deemed appropriate". When I once mustered up the courage to ask what that meant, his answer was "mess up and you'll find out". We never had occasion to "find out".

Consider that a seizure pursuant to a warrant was for us almost a last resort in a process where there were many attempts to secure voluntary compliance before it became necessary to go that route. I, for one, was and still am very conscious of the power vested in such a warrant and the need to not abuse it.

Both I and the US Attorney's folks were overly cautious to avoid exposing our respective folks to what is known as a Bivens action, which is a lawsuit for damages which can be brought against an agent for violation of an individual's rights by intent or negligence - the equivalent of a "civil rights suit" brought against state or local agents.

> "if it moves, we shoot" ... sounds
> like a bunch of juvenile, hormone-popping cowboys ...
> doesn't do much for the image of the FCC or the marshal's
> service ...

Translate that phrase to "if the on-scene expert identifies it as radio equipment specified on the face of the warrant it will get seized regardless of the protestations and fabrications of the individual or the attempts to disguise or hide it". Does that make more sense?

What is being emphasized is that if we get to that point, there is no longer any negotiation with the operator, that stage having been passed a long time before (see my comment above).

> .... now I know you're gonna tell me some of that was really
> necessary in reality, which was probably true in a few cases
> .... so, some details might be in order to put such "effort"
> into its proper perspective, given the times and tendencies

"On my watch" we never had occasion for the Marshal Service to need to use force on an individual, although other offices have had to. It came close on one or two occasions, but we worked with good Deputy Marshals who could defuse the situation before it got out of hand. Such decisions are really up to the Marshal Service, not to the FCC agents.

We did have numerous occasions to enter premises or spaces within a premises using force applied by tools. That, too, was a last resort - we usually had an on-call locksmith master-key us into a locked premises pursuant to a warrant to enter the premises and the explanation that the Marshal Service had the authority of the court to "take the place apart" was usually sufficient to persuade the individual to make access to the proscribed equipment possible without that necessity.

Final comment - I feel sorry for those folks who just don't have enough sense to keep themselves from getting into a situation where as seizure is necessary.

>die because of politics.
>73, Cecil, W6RCA

Well maybe not. But I'm a realist. If for no other reason, code will die because most who use it will be dead in 30 years. Being a CW only op (in recent years anyway) I would like to see the CW bands populated so I have someone to talk to. But as the old guys die off the political winds will surely shift and the inevitable will happen. No more code test. I'm resigned to the fact. And I'm not sure I care. But I'm also sure that the communicators will take over in the end as well, so maybe you lose too...

/\

NEW PRODUCT ANNOUNCEMENT

/\

The Solar Terrestrial Dispatch is pleased to announce the availability of an affordable and diverse new software package known as Ge+lert (a Geophysical Alerting System).

For those interested in monitoring current auroral activity conditions, Ge+lert will provide near-realtime information concerning current levels of auroral activity worldwide. It will also tap into a global network of amateur and professional auroral activity observation reports and display the locations of current and recent ground-based auroral activity sightings on detailed global or regional (North American, European and Australian/New Zealand) maps of the Earth.

In addition, Ge+lert uses a rules-based algorithmic processor to intelligently issue its own reliable auroral activity watches or warnings for the following latitude bands:

* Polar Latitudes
* High Latitudes
* Middle Latitudes
* Low Latitudes
* Equatorial Latitudes

The watches or warnings can be audibly issued by Ge+lert in realtime. The chances of missing a large auroral activity storm event are significantly reduced with this software, which interprets near-realtime spacecraft and ground based data to compute whether a watch or warning should be issued for particular latitudes.

Users of our e-mailed warnings or watches will hopefully seriously consider purchasing a copy of this software, currently affordably priced at only $25 USD. This software will provide better and much faster coverage of auroral activity in your area than the e-mailed watches and warnings that we issue. In many cases, Ge+lert will warn you of impending activity before you receive e-mailed watches or warnings. And any watches or warnings issued by Ge+lert should be taken very seriously, given that the watches and warnings are based on current near-realtime observed conditions.

For more details concerning other features of the software, consult the Ge+lert White Papers web page at:

http://solar.uleth.ca/solar/www/geolert.html

We are hoping to receive a generous response from those who enjoy our e-mail services. Revenue from this software will help pay for maintaining our free e-mail services.

Questions or comments should be addressed to: COler@Solar.Stanford.Edu.

* Equatorial Latitudes

The watches or warnings can be audibly issued by Ge+lert in realtime. The chances of missing a large auroral activity storm event are significantly reduced with this software, which interprets near-realtime spacecraft and ground based data to compute whether a watch or warning should be issued for particular latitudes.

Users of our e-mailed warnings or watches will hopefully seriously consider purchasing a copy of this software, currently affordably priced at only $25 USD. This software will provide better and much faster coverage of auroral activity in your area than the e-mailed watches and warnings that we issue. In many cases, Ge+lert will warn you of impending activity before you receive e-mailed watches or warnings. And any watches or warnings issued by Ge+lert should be taken very seriously, given that the watches and warnings are based on current near-realtime observed conditions.

For more details concerning other features of the software, consult the Ge+lert White Papers web page at:

http://solar.uleth.ca/solar/www/geolert.html

We are hoping to receive a generous response from those who enjoy our e-mail services. Revenue from this software will help pay for maintaining our free e-mail services.

Questions or comments should be addressed to: COler@Solar.Stanford.Edu.

Jim,
Do you have the chip and it's just a matter of putting it in?
Is it a commom chip or one made just for Kenwood. If its something made
just for Kenwood or a processor chip, you'll be very lucky to ever find it.
If it is the PA, then RF parts may have it and the job is easy. You have to
find out the chip you need and its availability. Then maybe connect with
one of your local ham clubs to see if they know someone who can repair. The
best commercial repair people I know of are at Burqhardts and you could call
them and talk with them about your problem 1-800-927-4261. They are in
South Dakota

> any repeaters with just a 5w HT but, I know I could do it with a 20w-50w

You might be surprised...

Of course it depends on your location, the repeater's
location, antennae, etc. Last summer, I QSO'd with a
mountaineer at Camp Muir (about halfway up Mt. Rainier)
via a repeater that was probably well over one hundred
miles from him and his 5W HT. It was like he was on the
next block.

Of course if you ARE going to be using the HT in areas
where you are genuinely unable to hit the repeater, the
cross-band mobile rig will work for you.

> So now that you know what I want to do and my reasons for wanting to do them,

3696. THE STORY OF "TAPS"

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-24 00:00:00 UTC
From: kd4utf@juno.COM
Message-ID: <19981124.020921.-99627.10.KD4UTF@juno.com>
Source record: 157236

<<THE STORY OF "TAPS"

It all began in 1862 during the Civil War, when Union Army Captain Robert Ellicombe was with his men near Harrison's Landing in Virginia.

The Confederate Army was on the other side of the narrow strip of land.

During the night, Captain Ellicombe heard the moan of a soldier who lay mortally wounded on the field. Not knowing if it was a Union or Confederate soldier, the captain decided to risk his life and bring the stricken man back for medical attention.

Crawling on his stomach through the gunfire, the captain reached the stricken soldier and began pulling him toward his encampment.

When the captain finally reached his own lines, he discovered it was actually a Confederate soldier, but the soldier was dead.

The captain lit a lantern. Suddenly he caught his breath and went numb with shock. In the dim light, he saw the face of the soldier. It was his own son.

The boy had been studying music in the South when the war broke out. Without telling his father, he enlisted in the Confederate Army.

The following morning, heartbroken, the father asked permission of his superiors to give his son a full military burial despite his enemy status.

His request was partially granted.

The captain had asked if he could have a group of Army band members play a funeral dirge of the son at the funeral. That request was turned down since the soldier was a confederate. Out of respect for the father, they did say they could give him only one musician.

The captain chose a bugler. He asked the bugler to play a series of musical

notes he found on a piece of paper in the pocket of the dead youth's uniform.

This wish was granted. This music was the haunting melody we now know as "Taps" used at military funerals.
****

For those who are interested this is the words to " TAPS "

Day is done,
Gone the sun,
From the lakes,
From the hills
From the sky
All is well,
Safely rest,
God is nigh.>>

Subject: TG

He laid her on the table
So white clean and bare.
His forehead wet with beads of sweat
He rubbed her here and there.
He touched her neck and then her breast
And then drooling felt her thigh.
The slit was wet and all was set,
He gave a joyous cry.
The hole was wide...he looked inside
All was dark and murky.
He rubbed his hands and stretched his arms...
And then he stuffed the turkey.

3698. Christmas Story on horseback.

Christmas Story

On Christmas morning a cop on horseback is sitting at a traffic light, and next to him is a kid on his shiny new bike.

The cop says to the kid, "Nice bike you got there. Did Santa bring that to you?" The kid says, "Yeah." The cop says, "Well, next year tell Santa to put a taillight on that bike." The cop then proceeds to issue the kid a $20.00 bicycle safety violation ticket.

The kid takes the ticket and before he rides off says, "By the way, that's a nice horse you got there. Did Santa bring that to you?" Humoring the kid, the cop says, "Yeah, he sure did." The kid says, "Well, next year tell Santa to put the dick underneath the horse, instead of on top."

3699. If it don't seem like it's worth the effort, it probably ain't.

"How To Beat A Speeding Ticket"
A Howard County Traffic Policeman recently stopped a woman for exceeding the
posted speed limit. He asked the driver her name.
She said, "I'm Mrs. Ladislav Abdulkhashim Zybkcicraznovskaya from the Republic
of Uzbekistan visiting my daughter in Columbia."
The cop put away his summons book and pen, and said, "Well... OK... but don't
let me catch you speeding again."

There were these three guys, a Polish guy, an Italian guy, and a Jewish guy.
They all worked together at a factory. Everyday they noticed that their boss
leaves work a little early. So one day they meet together and say that today
when the boss leaves, they'll all leave early too.
The boss leaves and so did they. The Jewish guy goes home and goes to rest so
he can get an early start the next morning. The Italian guy goes home and
cooks dinner. The Polish guy goes home and walks to his bedroom. He opens the
door slowly and sees his wife in bed with his boss, so he shuts the door and
leaves.
The next day the Italian and Jewish guys are talking about going home early
again. They ask the Polish guy if he wants to leave early again and he says,
"No". They ask him why not and he says, "Because yesterday I almost got
caught!">>

3700. A Would-be hero.

In a crowded city at a crowded bus stop, a beautiful young woman was waiting for the bus. She was decked out in a tight leather miniskirt with matching tight leather boots and jacket.

As the bus rolled up and it became her turn to get on, she became aware that her skirt was too tight to allow her leg to come up to the height of the
first step on the bus.

Slightly embarrassed and with a quick smile to the bus driver she reached behind her and unzipped her skirt a little thinking that this would give her enough slack to raise her leg. Again she tried to make the step onto the
bus only to discover she still couldn't! So, a little more embarrassed she
once again reached behind her and unzipped her skirt a little more and for a
second time attempted the step and once again, much to her chagrin she could not
raise her leg because of the tight skirt. So, with a coy little smile to the driver she again unzipped the offending skirt to give a little more slack
and again was unable to make the step.

About this time the big Texan that was behind her in the line picked her up easily from the waist and placed her lightly on the step of the bus. Well, she went ballistic and turned on the would-be hero screeching at him "How
dare you touch my body!! I don't even know who you are!"

At this the Texan drawled "Well ma'am normally I would agree with you but after you unzipped my fly three times, I kinda figured that we was friends.">>

3701. A small fish hook.

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-24 00:00:00 UTC

A good ol' boy applied for a salesman's job at the biggest store in the world --you could get anything there. The boss liked the cut of him and said,
"You can start tomorrow and I'll come and see you when we close up."

The next day at closing time, the boss saw him shaking hands with a beaming customer. After they parted, he walked over and asked, "Well, that
looked good! How many sales did you make today?" "That was the only one," said
the salesman. "Only one?!" blurted the boss. "Most of my staff make 20 or 30
sales a day. How much was the sale worth?"

"Three hundred twenty-seven thousand, six hundred thirty-four dollars and change," said the young man. The boss paused for a moment, flabbergasted. Then he asked, "How did you manage that?"

"Well, when he came in this morning and I sold him a small fish hook. Then, I sold him a medium hook, and then a really large hook. Then I sold him a
small fishing line, a medium one, and then a big one. I then sold him a speargun, a wetsuit, scuba gear, nets, chum, coolers, and a keg of beer. I asked him
where he was going fishing and he said down the coast. We decided he would
probably need a boat, so I took him down to the boat department and sold him that

twenty-foot schooner with the twin engines. Then, he said that his Volkswagen probably wouldn't be able to pull it, so I took him to the car department and sold him the new Deluxe Sport Utility Vehicle, with a winch, storage
rack, rustproofing, and a built-in refrigerator."

The boss took two steps back and asked in astonishment, "You sold all that to a guy who came in for a fish hook?!"

"No," answered the salesman. "He came in to buy Tampons."
"Tampons?"

"Yeah, Tampons. They were for his wife. I said to him, 'Well, your weekend's ruined .... you might as well go fishing!'"

****

A married couple was enjoying a dinner out when a statuesque blonde walked over to their table, exchanged warm greetings with the husband, and walked off. "Who was that?" the wife demanded.

"If you must know," the husband replied, "that was my mistress." "Your mistress? That's it! I want a divorce!" the wife fumed. The husband looked her straight in the eye and said, "Are you sure you want to give up our big
house in the suburbs, your Mercedes, your furs, your jewelry, and our vacation
home in Mexico?"

For a long time they continued dining in silence. Finally, the woman nudged her husband and said, "Isn't that Howard over there? Who's he with?"

"That's HIS mistress," her husband replied.

"Hmmph..." she said, taking a bite of dessert. "Ours is much cuter."

3702. If a pig loses its voice, is it disgruntled?

"Cash, check or charge?" I asked after folding items the woman wished to purchase. As she fumbled for her wallet I notice a remote control for a television set in her purse. "Do you always carry your TV remote?" I asked.
"No," she replied. "But my husband refused to come shopping with me, so I figured this was the most evil thing I could do to him."

A man was speeding down the highway, feeling secure in a gaggle of cars all
traveling at the same speed. However, as they passed a speed trap, he got nailed with an infrared speed detector and was pulled over.
The officer handed him the citation, received his signature and was about to
walk away when the man asked, "Officer, I know I was speeding, but I don't
think it's fair - there were plenty of other cars around me who were going
just as fast, so why did *I* get the ticket?"
"Ever go fishing?" the policeman suddenly asked the man.
"Ummm, yeah..." the startled man replied.
The officer grinned and added, "Ever catch *all* the fish?"

<<A priest, rabbi and televangelist were playing their usual Wednesday round of golf, and started discussing their weekly collections. Specifically,
they started to compare how they decided what portion of the collection to
keep for themselves and what portion to give to God.
The rabbi explains: "I draw a circle around myself and toss the money in the
air. Whatever lands in the circle I keep for myself. What ever lands outside
the circle, I give to God."
The priest then adds: "I use a similar method, except that whatever lands in
the circle I give to God, and whatever lands outside the circle I keep for my
personal needs."
The televangelist then proclaims: "I also use the same method. Except, that I
toss the money in the air and I figure that whatever God wants, he can take."

Two young hikers were hiking through Yellowstone National Park. They rounded a

curve and came face to face with a huge grizzly bear with cubs about a hundred
yards away. The bear charged. One of the hikers immediately sat down, pulled
his tennis shoes out of his pack, and began putting them on. The other hiker
said, " You're crazy! You can't outrun that bear!" The first fellow says, "I
don't need to outrun the bear. All I
need to do is outrun *you*!"

Only a very sick mind would pester people until he was ignored.
Did Rambutts mom not pay him any attention? Did his dad,(whomever he
was) not tell him he loved him? I say we need to have a fundraiser and
get Rambutt the help he needs. Come on folks! Lets help Rambutt before
he starts to torture little animals or worse. You know, in Florida he
was banished from the area of a school for trespassing. He kept coming
onto the property of a school walking for exercise! (That fatass says
he's a "power walker"! BWAHAHAHAHAH! Look at his fat face on his
stations website http://www.mix103fm.com/html/drew.htm and tell me
he's a power walker. Jesus.) Anyway, he was told he can't "walk" on
school grounds which to me is fine, because I wouldn't want a weird
looking dude on my son's campus. Anyway, Drew not only causes problems
on here, he causes problems wherever he goes. Well, read for yourself.
Here's a message he sent when he was mnmaniac@aol.com.
ï¿½
The Peoples Republic of Orange County Schoolsï¿½
Author: ï¿½ MN Maniac
Email: mnmaniac@aol.com
Date: 1997/06/03
Forums: fl.politics

I'm a "Power Walker", which means I take long, brisk walks as part of
my
daily workout routine. I average 8 miles/day, 6 days/week. I live in
a
fairly new Orange County subdivision with a neighborhood elementary
school. Since we moved here last July, my daily walks have taken me
through the parking lot of the school. Not into the school building,
not
onto the playground; simply across the length of the parking lot. For
the
past 11 months, nobody has had a problem with this. Today, I was
stopped
by a security guard and questioned as to what I was doing there. After
I
explained that I lived in the neighborhood and was on my daily walk, I
was
told that all "visitors" on the school grounds must sign in and be
assigned a "badge." When asked why nobody had mentioned anything to
me
over the past 11 months that I have been walking through there on
almost a
daily basis, I was told that it was because "a parent called and
complained. She was concerned about the childrens' safety."

So, let me get this straight...even though I am a law-abiding citizen
who
PAYS for that school with my property tax dollars...even though I had
done
nothing suspicious, committed no crime, and did nothing to endanger
the
safety of anyone at that school...even though I have no children of my
own, but yet am forced to pay ridiculously high school taxes to
support
the education of other people's children...I cannot walk through the
PARKING LOT of my neighborhood school without being given official
permission to do so, simply because a parent (whose children I am
supporting with my property tax dollars) feels that my walking through
the
school parking lot may be a threat to the "childrens' safety?!"

If there are any legal professionals in the audience, I would like an
opinion as to whether or not they have a legal right to prohibit me
from
walking on the premises. If not, what is my legal recourse in the
event
that they attempt to force me from the premises?

-Drew in Sunny Central Florida-

Can you see this fatass walking 8 miles a day? BWAHAHAHAHAHAH!
Now here's a spoiled brat who can't take no for an answer. Gonna
challenge a school because he can't walk on campus. What a complete
and utter moron. This post show's that no matter what we do, Rambutt
ain't gonna go away. Power walk indeed! BWAHAHAHAHAHAH!!!!

Is that so, Casey Thrower? "Trespassing" is a legal definition of a crime. Do you have any proof of this? Proof that a crime has been committed? Proof that the party in question has been convicted of said crime? Unless you can back up your accusation of "trespassing" with proof to support your unsubstantiated claims, I would say you have a very good chance of finding yourself on the defendent's end of a libel suit.

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of
it over the years. Everything works perfectly.

I'm asking $90.00 for this beauty. Please give me an offer.
It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of
10:00am & 9:00pm.

73,
Bill

I think the normal transceiver can not be a repeater,transmitter and
receiver are working on the same time, the working condition have two,the
first is,you transceiver have two bands(like VHF & UHF),and TX on VHF,RX on
UHF,But this is not a good idea,
the users of team need to use two bands portable radio or mobile radio,when
user are talking to somebody from repeater,then must turn off the receiving
band's volume knob(sometimes you must to check this receiving
band),Inconvenient for a user.the other method to use two transceiver(same
band),and working separate(one TX and another RX) on the same time,on the
same band but not same frequency.now you must to choice two freqs.they can
tune 600KHZ~10MHZ(or High)away.these radios connect to a Duplexer,there are
3 connectors on a Duplexer,your Duplexer was tuned(your freqs.) before
setting.
many brands on the market,Motorla,Kenwood,YEASU,Icom,GE,Uniden,JRC.....If
you need cheap one,you can buy Motorla GR series,GR300,GR500 etc....
a little suggestion

The Chipswitch IC opens 10, 11, and 12.
The PLL PCB requires modification on most
radios to operate at 12. Rogerbirds, and
other sources show modification suggestions.

15 Meters is locked out by password until
someone comes up with a fix for the spur
at 15 Meters. Most likely, a daughter
PCB will have to be designed to be added
to the radio for 'clean' operation at 15.

Further information is available at
http://www.chipswitch.com/Password.htm

Hey Rambo...

You seem to talk trash and then threaten to sue people for what they say. Why do you do this? It makes YOU look like an ass! Well, I guess thats what you want. You must really have no life. I feel sorry for people in your local area who have to deal with you in one form or another. You my friend need some help for your attention getting problem. Its obvious thats whats wrong. You strive for attention in any way you can get it. I feel sorry for you. I used to be that way too... When I was 6! Grow up a little. I know who you are and so do the rest in this group. I feel bad for you. I trully do. You need some help. Ever call a mental hospital. They can help you if you want it. Id be willing to donate some money to pay for your bills while your in a straight jacket. And so would the rest of us im sure. We would like to see a new CBRAMBO that has a great attitude and doesnt talk out of his butt. Please... Get the help you really need.

3721. amateurradio: live broadcast from germany

Do you want to listen to a german 2m repeater? Then visit the 1st german realaudio repeater "DB0WR Online". This is not just an ordinary repeater. DB0WR is a very heavy loaded city repeater in Stuttgart, fullfilled with universal-specialistsis, millionairs, diletants, unemployed and computerfreaks, who are talking about all unimportant things around the world. German language is recommended. Nice guestbook, QSL archive with pictures, technical discription...

http://www.steiner.org/db0wr

Mï¿½chtest Du einmal ein deutsches 2m Relais live erleben? Dann hï¿½r doch mal rein, beim ersten deutschenRealaudio Relais "DB0WR Online". Bei DB0WR handelt es sich keineswegs nur um ein normales Amateurfunk-Relais. DB0WR ist ein schwer beschï¿½ftigtes Stadtrelais auf dem sich viele Amateurfunker gleichzeitig tummeln (Multitasking), Breitbandsachverstï¿½ndige, schwerreiche Millionï¿½re, Stï¿½mper, Arbeitslose und Computerfreaks, die sich pausenlos ï¿½ber alle weltweit unwichtigen und brandaktuellen Themen unterhalten. Grundkenntnisse der schwï¿½bischen Sprache sind notwendig, genauso wie ein realaudio Player. Hï¿½bsches Gï¿½stebuch und eine virtuelle QSL-Karten Gallerie mit Bildern....

You hit the nail square on the head, Doug. These kind of "Hams" are a major problem.

Maybe soon they'll go away, blow out their brains, seek help, whatever. -- Just so long as they take a hike while they are at it.

I actively encourage such "Hams" to leave the hobby. They don't need Ham Radio, and in turn Ham Radio most certainly does not need them. There's a lot more to the fraternity of Amateur Radio than a "body count", and contrary to the accepted wisdom, Hams are not lobbyists and should not be regarded as such.

Quality; Not quantity please!

Many Hams are obsessed with increasing our ranks at all costs. - I think we'd do ourselves a lot more good by weeding out the "Anti-Hams" such as you mentioned, and the "LandLine Lid" group in packet who are destroying the packet network in the US through the same "motivation". (Nihilistic behavior based on low self-esteem.)

A good first step in eliminating a lot of this sort of destructive behavior might be to stop lying to new and prospective Hams about "free Internet access". They tend to become disillusioned when they are faced with the truth of the matter.

Ask yourself: How many of the participants here post from an AMPR.ORG address?

Does anyone know where i can find the mod to make a TS-440SAT transmit out of band. I am going to use it with a Ten-Tec 20-meter to 6-meter converter and wanted to cover more than the 350 KHz of transmit that the '440SAT would allow.

..also, if you have experience with the Ten-Tec transverter in this regard, I'd appreciate hearing about it.

Much Thanks..Bill (at k6whp@gte.net)

3728. hamradio-online.com: Low Cost Amateur Digital Video is Now a Reality

KT4OZ and KB5IHI this week demonstrated the feasability of low cost Amateur Digital Video. Using notebook computers, wireless LAN cards and off the shelf streaming video software, the conducted a two-way wireless digital video link in the 2.4 GHz band. Assuming you already have a computer and camera (which is now common), the total cost of the additional components is minimal.

This technology demonstration shows one path to achieving low cost and widely available digital video in the Amateur bands. Such signals could further be linked via the Internet (since they use standard Internet protocols) to enable connections between distant Amateur TV repeaters. There are many fascinating applications yet to be developed from this technology experiment.

What's with these fools? Every post they make is cross posted to a number
of other newgroups!!!
Isn't this against N/G policy????

Professor....come and get um!

Watch out you two, You might be in for a nice surprise when Professor finds
out what your doing.

Another thing, why do you post your messages to make it impossible for
anyone to reply privately to you? Do you have something to hide? Are you
afraid of being found out? What's the real deal here?

Granted you two have an awesome legal vocabulary but come on now, do you
think half the people you post to are going to understand what you have said
with your Blacks' Law Dictionary words?

You might have been with the FCC and maybe you are lying to look good. I
don't believe you and that is my perogative. But I think you had better
delve deeper into what Toll has told you. You might be shocked at what your
FCC counterparts have been doing in Southern California.

I just got a used 706. It wont transmit on FM (any band 2, 6,or 10). It acts like its cutting back because of high swr, the PO meter momentarily jumps up but imediately drops to nothing. SWR is OK, using a dummy load and all other modes transmit full power. Receive is fine. I love the radio and dont want to send it back. Please help. Any suggestions?
Tnx. Bruce

Popular with truckers, CBers and other bootleggers, that is.
I say, good deal.

> Ham radio is dying.
> Is there really any question?

Too bad you weren't around 25-30 years ago to make the same pronouncement when Hallicrafters, Swan, Hammarlund and Collins got out of the ham equipment biz and Radio Shack stopped selling ham gear the first time around.

Or maybe you would have pronounced TV dead when Muntz, Philco and RCA stopped making sets and Crazy Eddie's applicance store closed down.

Keep up the postings, dude. If nothing else, you're providing a lot of comic relief. Hope you don't ever leave to spend more time designing rockets.

IC-751A has keyer built in... Otherwise I think both
rigs are the same. These are excellent quad conversion
receivers. 100w continuous service tx.
They are compatible with today's Icom Auto Tuners etc.
Disadvantage is computer control add ons are no longer
mfgrd,and are very rare on used market. This is a feature
people want today... but never bought into back when these
were current.
I see them for $500-600 similarly equiped... but only if MINT.
The EXTERNAL power supply is prefered for heat disapation
reasons, and amps... but at least the one you have
has one or the other.

in response to your reply I'm sorry if you don't have a sense of humor
but I'm sure that you don't know who i am so for you to call me a newbie
you might be mistaken by a few years.

I have been on the radio since the early nineteen seventies and on a
computer since the late seventies.

so please be sure of your facts before you attack some one.

now i could respond the way you might understand but the FCC does
not allow encoded messages on open air.
example: @#$%%@&**#$$@!!?!!#@$$%*).

Thank you for your time in this matter.
sincerely G.D. Palmer

Libel suit?? BWAHAHAHAHAHA . . . now I've heard everything, Drew!! You know, Mr. Durigan, you remind me more and more of your buddy Eric Oyen all the time. At least HE had the good sense to disappear from the newsgroups after embarassing himself with his TOUGH TALK about legal action after claiming he had been "blackmailed." You, on the other hand, seem to stick your foot deeper into your mouth every time you respond to post in this newsgroup. Do we really need a rerun of Mr. Oyen's blackmail allegation in rec.radio.amateur.misc?? Hardly. Lighten up, Drew--I'm sure you'll enjoy life a lot more.

I just recently bought a 2100 also. So far it seems to work great. no probs. yet . A couple of my friends have the 2000 and both radios still function perfectly and they are a couple of years old now. But I have a question, I've seen the tx expansion mod at qrz.com for the 2100, but i was wondering if anyone has actually done it, of had it done? Thanx... Doc

>I rest my case until then.

Some points to consider:

1.) You haven't been around that long, relatively;
2.) You took the wrong month for hiatus;
3.) Until you provide substantiation, you got no case to
rest on, for the time being.
4.) Demanding identification of one person's presence
outside the chronology of a 25-year career as substantiation
of that 25-year career is irrelevant to that 25-year career
in light of all the other existing records supporting that
career. Look around a bit first.

No Rambo... It doesnt take much reading to figure what type of person you are. Your no different than the people on CB... I guess that explains your alias. You must really think your tough talk trash in a news group scares people or makes them think you are a "hero" or something. YOU A LAME. Let me tell you something boy... YOU TRY to act bad... But you arent. Your like this nerd I knew in college. He talked trash too... and people gave him a hard time about it. Not to people faces, but on the Internet Message Board. When someone found out who he was they laughed because he was 6'3'' and about 150 pounds with his cloths wet. Needless to say he got the hell knocked out of him a a ballgame one night. Well... Im NOT threatening you by what im about to say. Someone in this newgroup may not like how you "Talk Tough" and may see you at Dayton next year and clean your clock for you. Im not a violent person and wouldnt do that unless provoked into it. But im sure there are some people in here that arent as passive as me and would do it without thinking twice and you would be able to prove nothing. Its happened at Dayton before when people have met some of the lamers from 75 meters. You should watch what you say about people and other things. You could upset the wrong person. Dont get yourself into something you really dont want.
Josh

3772. Radio Shack has HTX-202's BRAND NEW for $129.99!! Well worth it!

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-25 00:00:00 UTC
From: chia@news.utk.edu
Message-ID: <73gd9chqa2@gaia.ns.utk.edu>
Source record: 157172

Had to tell this. I just got the new Radio Shack flyer today and they
have the HTX-202's NEW on sale for $129.99!! This is a great HT for the money.
I have owned many many HT's and I always go BACK to my 202 when the noise
and/or interference is very bad. Because the RX in the 202 is 5 to 1 better
than all the other HT's I have had and have now. Anyway I wanted to let the
Hams out here know that they were that cheap... these are NEW and I have seen
some idiots want that much for a used one. (guess I would too if I paid like
$220+ for it...)

Oh, I supposed some of the W5YI VEs might be critical of the ARRL
(that might be why they chose to align themselves with W5YI).

Just a reminder, Burt:

S97.525a4: The only circumstances that may allow a VEC to refuse
to accredit a qualified person as a VE is if the VEC determines
that questions of the person's integrity or honesty could com-
promise amateur license examinations given by that person.

Hey Joshie Washie,

Here some news for you, I don't care for the fact alone that you assoicate yourself with a certain someone who made rasicst comments on 20 meters Sunday Afternoon. Second, If CBRambo wants to "Talk tough" that his business, Actually he makes more sense than Burp Fisher and others. Label me a idiot now, in the same group as CBRambo, because I'm a SJ too, and won't rest till some of these criminals are put to justice.

I'm curious Tom, were you somehow making a comparison of this post to those of Burt Fisher? While I don't know the poster of the comment "your what hurts" it would appear to be light hearted humor at worst. Do you think this is similar to Burt's attacks and insults to new hams and specifically teen hams?

Mr. Whiten, amateur radio IS my life! It is both my hobby AND my business! And it's people like you who are ruining it for people like me and my family. Everyone blames the internet for a decrease in amateur activity. I think it's the sewer on our bands! My 12 year old son wants to be a ham, but I'm embarrassed to! I'm almost thinking that my local CB'ers are a better group to hang out with! Tuning across the bands, I have to keep the volume low so my wife and kids don't hear the vulgar and racist rantings of f*cknuts like you, Mr. Whiten!

No, ain't gonna give it up, Mr. Whiten. After your display last Sunday, I'm gonna be on you like flies on sh*t!!!!!!

Actually Jeff there is another way a VE can loose his accredidation.
If a VE does not work a session in the year preceeding his renewal
the ARRL can drop him. This is what Burt did and this and only this
is the reason he was dropped. Burt set it up like this so he would be
dropped and he would have something to bitch about. The guy is a
total zero.

BTW I like your new call.

This guy wants 300 bucs for a radio that is very much out dated. I do
belive that the 530 itself is only worth 300 bucs. I geuss your right
that this is some kind of humor.

Hello
I have a ICOM 740 with built in power supply and a Dentron 160 10L linear amp. The amp uses 4 811As or 4 572Bs with 1800 V on the plate that I would like to trade the pair for a Kenwood TS 930 with antenna tunner or a Heathkit SB 220 or SB 221. I have the hand mic and operation manuels. The radio is a 8 and the amp is a 6 on a scale of 1 to 10. If you are interested drop me a note at
oris@dirtball.com.
Thankyou
Oris

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of) WT Docket No. 98-143
)
1998 Biennial Regulatory Review --) RM-9148
Amendment of Part 97 of the Commission's) RM-9150
Amateur Service Rules.) RM-9196
)
)

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments contain proposals on reducing the number of amateur radio operator license classes, and suggestions regarding Morse testing.

I. Discussion:

The NPRM proposes reducing the number of operator classes from six to four. This reduction would be accomplished by phasing out Novice and Technician Plus classes, leaving the remaining four classes in place. It is worthy of note that this plan would preserve the heart of the so-called "incentive licensing" plan which was implemented in 1968.

I believe that the effects originally expected of the incentive licensing scheme have not been realized in practice. There is little evidence that this scheme, now 30 years old, has produced any notable increase in the skills, operating excellence, advanced electronic techniques, or other tangible valuable difference between the operators in the various "non-entry-level" classes of licensee.

As a non-scientific but pragmatic experiment, tune a receiver to 14.350MHz. Close your eyes and slowly tune the receiver down across the 20M amateur radio band. Try to detect the "class boundaries" based on a difference in signal quality, better operating practices, or more advanced technical conversations. I think you will find no detectable difference as you transit across the frequencies which mark the boundary between General, Advanced, and Amateur Extra sub-bands. Thus it can be assumed that the expectations of the incentive licensing program (greater levels of technical and operating skill at higher license classes) have not been realized, and the incentive licensing plan can be safely abandoned as providing no significant benefit to the public interest, necessity, or

convenience (PICON).

II Proposal:

A. License Classes:

If the interest of the FCC is (as stated in the NPRM) streamlining of the licensing structure, then I propose that the license classes be reduced to two classes, namely "Basic" and "Advanced".

The "Basic" license would have an entry-level test (basic regulations, safety, operating procedures, basic DC and AC electronics). Without CW endorsement this class would have full frequency and mode priveleges above 30MHz, power limited to 50W output.

The "Standard" license test would be of a difficulty level similar to the current Advanced class test, and would have full privileges above 30MHz at power levels up to 1500W.

B. Morse required for operation below 30MHz

Either license class could gain access to all MF/HF amateur radio frequency allocations (at 50W and 1500W respectively) upon passing a Morse test of 5WPM and gaining a "CW endorsement" for their operator license.

The Morse test should be "fill in the blank" or "1 minute of solid copy". Multiple-choice test formats should not be allowed.

C. Status of current licensees.

Current licensees should be redistributed as follows:

Current class	Converts to
Novice:	Basic CW Endorsed
Technician:	Basic
Technician+:	Basic CW Endorsed (Note 1)
General:	Standard CW Endorsed
Advanced:	Standard CW Endorsed (Note 2)
Extra:	Standard CW Endorsed (Note 2)

Notes:
1) "Old" Technicians (who took same written test as General and 5WPM) would be "Standard" CW endorsed.
2) Current Advanced and Extra licensees could continue to have that class printed on their license in recognition of their previous status.

Respectfully submitted,

H. Hans Brakob, K0HB

There is no part of the above that is true.
Plus W1TTY has not been dropped and his sessions are fewer than
mine.

Hello all,
I have to trade a 486 persaio 924 computer and a ICOM 27 and KPC 2 TNC for a good working Kenwood HF rig (TS 430, TS 140, TS 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte harddrive, keyboard and mouse. The ICOM 27 has tone mic and does 45 watts. I will also consider tradeing the ICOM 27 and KPC-2 TNC or the computer for a TS 130 TS 120. I'm looking for a Kenwood HF rig for moblie operation. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.
73 and thanks for reading,
Oris

Hi All,
Thanks for taking the time to read this.
Is there anyone from Maine who can help me?
I am at present living in the UK but I am moving to Maine next week.
I am marrying a girl from Maine who I have known some time. I am a UK
Radio Amateur Call G6VYS. I know I need to get a new licence to
operate in the US but I am looking for somewhere to take the test
and/or learn the syllabus.
Is there anywhere in Maine that I can do it?
Thanks in advance.

Mac Grayliner, version 2.0.0, has just been released.

Mac Grayliner displays a map of the entire Earth, showing day, night, and more importantly, the terminator between day and night. Studies have shown that
enhanced radio propagation occurs between two points which are both on the day/night terminator.

Now with version 2.0.0, you can move the map around the screen, and change it's size. The registered version is PPC native, for maximum speed.

Mac Grayliner requires a Mac with a color display.

Mac Grayliner is shareware. A demo version may be downloaded from the Black Cat Systems web site at
http://www.blackcatsystems.com/software/grayliner.html

Incorrect, Barrister Thrower. What part of the American legal system don't you understand. A person is never "guilty of criminal trespassing", or any other CRIME, unless convicted in a court of law. Open mouth, insert foot. Par for the course and about what you'd expect from someone with a plastic submarine fetish such as yourself. Keep it up, Thrower. Keep libeling in public forums such as this and see how long it is before someone takes you to task (and to court) for it. It might not be me, but someone will get you sooner or later.

You should have been a lawyer instead of a 5 buck an hour record
player.

Fact: You trespassed on school property by your own admission
Fact: You got your fat ass run off from said property by a security
guard.
Fact: You asked for legal help in challenging the school so you and
your fat ass could walk on school property.
Fact: You were made fun of by many who said your a jerk and a
troublemaker.
Fact: You would have been arrested for criminal trespassing had you
and your fat ass come back on school property.
Fact: You are a spoiled brat who didn't get any love as a child, hence
your social disfunction.
Fact: I only state fact, Rambutt. Now go play with yourself.

The French are not Caucasians? Just what race do you think they belong
to? Of course, many Vietnamese refugees sought French asylum leading up
to 1975, so it might be possible the original author of this thread
was Vietnamese, but how would you know his race, Tom?

(France ruled Viet Nam for 150 years, so even though many (most?)
Vietnamese hated their French rulers, they looked to France for salvation
from their North Vietnamese invaders - France welcomed the refugees with
open arms, as did Canada, Australia, and of course, the U.S.)

Tossing that "racism" label around has gotten popular - even the pro-
gay folks refers to us conservatives as "racists," as if being gay
is some other race!

Jeff KH6OO (who is *extremely* conservative!)

Well, to me this sounds like an undeserved slam on a guy that seriously wants to trade his old computer/packet gear in for some HF capability. What's wrong with that? Since the reply to that message really strains credibility and smacks of sarcasm, I have to assume that this posting pushed some emotional hot-button. I haven't a clue as to which one however...

Question: So you cannot tune the VFO below 30 MHz? I guess if you only have the memory channels for <30 it's OK. You can probably just store that station or two that you want to hear, or maybe CB Channel 19 or something. They should have really made it so the IC-Q7A would normally cover down to 25 MHz itstead of the 30.

Ham Radio.FAQ is a frequently-asked questions file intended to
summarize some of the common questions and help beginning ham
radio operators get started.

If you aren't yet a licensed ham radio operator but are thinking
of getting your "ticket", you are encouraged to explore via this
FAQ and the WWW sites it LINKS to and get a sense of how
t o t a l l y neat amateur radio is. After all,
amateur radio IS the first wireless Internet!

You only stand to GAIN - in technical knowledge, operating
skills, new friendships all over the world, and a sense of pride
and accomplishment in earning your license, assembling, and
operating YOUR very own station.

Please provide the URL the Ham Radio.FAQ to any new or soon-to-be
Hams that you know or create a link from your site to us to help
pass the word.

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

Your suggestions, corrections, ideas, and assistance are
appreciated!

I live within driving distance of Henry, and have done a bit of business with
him....

He built two repeaters for me, a 2 meter and a 440 mhz... both worked well.
He has built repeaters for a couple of friends, all work well...

I have seen his work and what I have seen is of high quality....

I wouldn't hesitate dealing with him again...

Of course, this is MY opinion, and someone else's may be different....

I suggest you continue to ask around.

>have to watch every word you say on the air like you do with ham,

And if you don't use the proper term at the proper time and speak it in the proper manner, be prepared for a stern lecture from the local repeater cop who has no life outside of amateur radio.

> you
>will have a greater degree of privacy than you will on ham, you won't
>have to get a P.O. box just to avoid having your home address posted
>all over the Internet on those damn callsign servers

And if you DO use a P.O. box, or other alternate address, be prepared for the above-mentioned repeater cop to accuse you of being in violation of FCC regulations. Damn idiots cannot seem to read Part 97 and understand the difference between "valid mailing address" and "physical station location."

>and you won't
>have to deal with whining yuppies who will shut their repeaters off on
>you just because you don't think exactly the way they do and lead a
>boring yuppie life. If a repeater owner is not an elitist pig and he
>welcomes all hams, his repeater is labeled a "dirtbag" repeater.

And if he isn't a code-preaching, ARRL-worshipping, "real ham", he will be labeled as a "CBer" (and worse) by other hams who fit the previous description.

These are the reasons why I decided to sell all my equipment and get out of ham radio. Used the proceeds to buy something useful for personal communications in 1998...a newer, faster computer. Couldn't be happier. I would suggest that others do the same.

I'm sure that the millions of licensed hams who started out with an HTX-202 will be happy to hear that you consider them all to be "bootleggers." I'm also sure that the many professional drivers who hold amateur licenses will be glad to know that you consider all of them to be "bootleggers."

Pompous attitudes like yours...the ever-present "holier-than-thou" HAMBO...are a primary reason why interest in amateur radio is steadilly dropping off.

You've got it backwards. SELL the ham equipment and BUY more computer equipment.

The way you're doing it is kind of like SELL the new Lexus and BUY a Model T with a hand-crank starter.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

>From the Editor's Desk:

Lots of things happening in this week's Newsletter, so let's get to it! The ACS Newsletter FAQ will go out to subscribers this week; look for it in your email and be sure to save a copy; it has important information you'll want to know corning the Newsletter list.

Happy Thanksgiving!

Stay safe everybody -- see you next week! Dave Larton, Editor
.....

From: Bill <Wpeirce@thegrid.net>
Mr. Larton,

This week's emcomm bulletin re: ID cards came to us at an appropriate time. It poses some questions which you may be able to answer for us.

In San Luis Obispo County, we have our volunteer emergency communications under an umbrella organization call The San Luis Obispo County Emergency Communications Council (SLOECC). SLOECC is the logistics support group for a combined ARES/RACES effort. We work through our county communications unit for our local Office of Emergency Services.

As an ARES organization, we are part of a three-county section which includes Santa Barbara and Ventura Counties. We associate closely between the three counties and are prepared to offer mutual-aid to each other if needed.

The question: Our ID cards expire in June. Having read the bulletin, we know there is no standardized card. However, our counterparts in Ventura County believe that cards should contain the words "State Disaster Worker" in order to be viable to most jurisdictions. Do you feel that's the case? Are there some more or less "required" phrases which we should consider?

One of my major concerns as the incoming D.E.C. for San Luis Obispo County is not that our cards won't be excepted by our local OES folks, but that other more regional organizations like the Highway Patrol will not honor them and delay our attempts to gain access to our assigned locations. Are there any suggestions along those lines? I can just visualize being turned back at a road block by the CHP after being asked to provide mutual aid to another county.

Thank you for any suggestions you may be able to offer us along those line.

Regards,
William Peirce, KE6FKS
ARES DEC/Vounteer RACES Officer, San Luis Obispo County
(Member-Morro Bay City Council)

(Thanks for the question! What is utimately needed to get the ID card process to a happy ending is: Information- Let people know who you are on the card; Cooperation- get all the organizations together and let everybody have a chance to participate! You 'll find that a common regional card that is recognized by all of the agencies involved will get you ahead faster than trying to 'sell' a card idea to everybody. The ARES picture ID, if accepted by all of the parties involved, may be all you need. Durin g the Loma Prieta earthquake, ARES personnel were waved through because they had an already recognized and accepted magnetic sign on their automobile. Lastly, you need Education- inform ALL the players (preferably at the Operational Level) of the existen ce of the card and the responsibilities of the bearer...and do it often! Personnel change a lot in Emergency Services, and you'll need to keep your presence 'known'. Remember, if a police officer stops you from entering a secured area, card or not, he is just following orders. Have him contact a superior and make contact with the Emergency Operations Center. If you need to get in, cooperation and patience will go a long way. Keep us all informed of your progress! -- Dave Larton)
.....
From: Bjosuweit@aol.com Hi Dave,

As a further discussion point on the importance of identification cards, readers may want to check out my column on the Swiss Air Crash in the December, 1998 issue of CQ VHF. Canadian hams stress the importance of ID cards following the crash and the need for ID's was mentioned in the afteraction

report on the TWA 800 crash.

Radio Shack has a new item which may find a home in the "go kits" of many emergency communicators -- it's a $99.95 simplex repeater. A simpeater uses a digital audio recording chip to record what it hears and then retransmits it. The idea is to put the simpeater up high someplace so mobile/portable units can hear one another over greater distances (much as a regular repeater does).

Being simplex, the simpeater doesn't require complex repeater hardware (duplexers, etc.) but is also more cumbersome to use -- you talk, you and the other station hear what you said, the other station talks, you and the other station hear what the other station said, etc. Simpeaters were popular several years ago and almost as quickly disappeared from the scene. I am not sure of their legal status -- though with the level of enforcement we're seeing that doesn't seem to be a problem, especially in emergency communications.

The device comes with a cable for Tandy, Alinco, Standard (I think), some Yaesu, and Icom radios (but not Kenwood). Attach the cable to the speaker/mic jack on your radio and set it to the desired simplex frequency/PL. The simpeater begins recording when the squelch opens -- actually about a second after so that a breath before you start talking -- and stops when the audio drops. It then retransmits what it heard, followed by a courtesy tone. And that is all it does -- no IDer, nothing.

The retransmitted audio quality is quite good. Recording time is limited to 30 seconds. Power is provided by 4 AAA cells or a 12v source. Power use seems to be very low.

The device is being marketed as a general purpose range extender, and can be used on FRS, CB, ham -- well, anyplace you can transmit, again subject to legality. My plan is to hoist a talkie and the simpeater up a tree when the link between Half Moon Bay (coastside) and Redwood City (bayside). I can imagine attaching the radio/simpeater package to tethered balloon at a SAR exercise or community event.

The device has the potential to cause lots of interference if used improperly. But should also prove useful in the proper hands. .....

Current Events:

SATERN ENDS EMERGENCY OPERATION

After 19 days in emergency mode, SATERN--the Salvation Army Team Emergency Radio Network--discontinued its daylong operation on 14.265 MHz on November 16. The net had operated the all-day sessions since late October to support the Hurricane Mitch flood relief effort in Central America.

SATERN Director and Salvation Army Maj Pat McPherson, WW9E, says the net has gone back to its once-daily nets (1500 UTC weekdays; 1530 UTC Saturdays) on the same frequency. "Any traffic from the affected area will be accepted then," he said. "If the need presents itself, we will go back to the emergency format of the daylong net."

Many stations in the US have been participating in the net to relay health and welfare traffic to and from relatives, to aid in assessing damage and the emergency needs of victims, and to assist other relief agencies in the region. Ham radio continues to be one of the primary means of communication in Honduras.

McPherson said SATERN handled more than 500 pieces of health-and-welfare traffic in the days immediately following the disaster activation, plus an untold amount of emergency, logistical and strategic traffic. "The value of Amateur Radio's use during disasters has again been demonstrated," McPherson said.

The FCC had accommodated the SATERN operation by declaring a communications emergency on 14.265 MHz. The emergency declaration was rescinded November 17 after the net returned to its regular schedule.

SATERN continues to accept health and welfare inquiries via its Web site, http://www.angelfire.com/il/satern411/satframe.html. The Salvation Army is calling Mitch "the worst Atlantic

hurricane in two centuries." The death toll has risen above 10,000 people. Damage to the region has been estimated at $4 billion. -- The ARRL Letter

The Black Rock Rangers are a volunteer organization which is dedicated to the safety of the participants of the annual Burning Man event held in the Black Rock Desert of Nevada. The Rangers patterned after the Texas Rangers and their historic role as guardians of a dispersed pioneer society. The Rangers help to facilitate community activities, as well as provide participants with information about activities and necessary services such as emergency medical services. The Black Rock Rangers are a non-confrontational, mediating entity designed to defuse any potentially harmful situations. The Rangers are not the police or a paramilitary organization. Control of the Black Rock Desert is the responsibility of the BLM and law enforcement in Washoe County is the responsibility of the Sheriffs Department. The Rangers primary duty is to help the citizens of Black Rock City maintain a safe environment and mediate potential conflict.

Now you know, and here's the point...

The Ranger organization is structured to produce competent and trained individuals to fill key Ranger jobs like dispatching the Rangers, SMA (Field Medical Responders), REMSA (Ambulance, EMS), Wilderness Fire, BLM and on site Washoe County Sheriffs Department. We need volunteer radio operators for our dispatch center to work for at least three 4 hour shifts over the seven day event. The volunteer dispatchers would receive a ticket, in and out access, Ranger hat and available clothes. The volunteer dispatchers requirements are that they attend one ROM Ranger Training session, prove that they have been certified as a emergency services communicator such as a local or national cert. We will also be using Amateur Radio as a make shift 911 system so a licence will be a plus but not necessary.

What I'm looking for in volunteer radio operators for BRCR, young trained people looking to get experience working in a harsh multi agency environment and both professional and volunteer public service people at Burning Man 99', and also a

experience that they will never forget!

Thank You,

Damon La Rose,
Lead Dispatcher, Black Rock City Rangers

This week's EMCOMM Bulletin:

EMC159 Harter CAP Meeting Notes 1/3
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC159 Harter CAP Meeting Notes 1/3 For release 11/23/98

The Civil Air Patrol is an organization in which Stan Harter had a deep personal interest. While going through some of his work after his demise in April, l998, this compilation was found. It is presented as written, with exceptions in brackets [xxx] at which we guessed as to what was intended.

"An all-day meeting was held at a Group headquarters in a CAP Wing to address the issue of stepping up its participation in and support of emergency services/civil defense incidents. The following notes, with appropriate modification to suit local conditions, could apply almost anywhere in the nation.

"The Group Commander posed the following questions to serve as
a roadmap to achieve increased support and participation of the
local community by Civil Air Patrol Emergency Services on the
ground:
1. What is our individual area of responsibility?
2. What do we want to do?
3. What do we have to do it?
4. What training do we need to do it?
5. What equipment do we need to do it?
6. What are our milestones to achieve our goals?

"A participant in the workshop was an official from the State
Office of Emergency Services. He pointed out that the very
first training required of CAP in California is an understanding
of the ICS -- the Incident Command System. CAP will find that
the ICS is quite similar to a SAR base organization; it is
created for an incident and is dissolved when the mission is
over. Local governments are not disposed to accept or utilize
external volunteers until they have been trained in their
methods, procedures, organization and systems. Contact your
local OES, fire department, or California Department of
Forestry.

"A study has been drafted in California to address volunteers.
It divides volunteers into two categories: convergent and
staff. Convergent volunteers are those who show up, often
unplanned or unexpectedly, following a disaster. Staff
volunteers are those who generally work within the system on a
regular, on-going basis. CAP is (or should be) in the latter
category. (Continues next week) --- To subscribe to bulletins,

The ARRL is trying to bring new people into the hobby, which they have been trying to do for the last thirty years, and they've succeeded (maybe too well) with the no code tech license, and now, the coming revisions to a/b/c license...

I'm all for more hams - I like most of the hams I've met, but there has to be more spectrum space for all us to operate - in some area of some bands we're stepping on each others toes now. Double or triple the number of hams licensed to operate there, and...I hate to think of the possibilities...
>>

I think that part of the problem here is that people are jammed into one or two bands (2m and 70cm), and ignoring the others. No-Codes (and the rest of us, for that matter) have literally more elbow room than they could ever possibly use.

Let's forget about HF for a second. There is 23122 MHz (that's 23.122 GHz) of ham bands between 50 MHz and 250 GHz. If they were to open up all HF privileges to anyone that can recite Ohm's Law and knows the CW character for the letter *e*, that would give them a total of 3.75 MHz more bandwidth. That is less than 17/1000th of 1% more than what is available above 50 mHz. Plus we can use everything above 300 GHz.

I think that is plenty of room. For the same reason, and others, I think that the licensing should be left the way it is now.

3857. Re: More Proof that Ham Radio is Dying...Radio Shack Closes Out Their HTX-202s

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-26 00:00:00 UTC
From: petermaus@aol.com
Message-ID: <19981126133959.19084.00000929@ng156.aol.com>
Source record: 157047

>Last year, AES closed their Tampa Bay store. This year, Radio Shack
>discontinues their HTX-202, formerly a very popular radio. Ham radio is
>dying.
> Is there really any question?

I've heard this pronouncement before. And on the face of it, there is a huge truth here...HOWEVER, that is only on the face of it. There is a much deeper truth here that belies the obvious.

AES closed Tampa. AES bought Erickson's here in Chicago and closed them, too. Gilfer, after 40 years is gone. EEB is out of the consumer business. And Radio Shack is getting out of Ham Radio.

But that only means that retail stores are difficult to maintain in the current state of today's business. No surprise there. Given that inventory maintenance and management, as well as overhead in maintaining any retail space, are expensive, the burgeoning sales worldwide of product through the Internet is making many retail stores unnecessary.

Amazon.com tells the story of not only immense inventory, but literally no retail staff to maintain. Amazon.com sells an inventory that is almost 500 times the size of the largest bookstores. With only office and shipping staff to pay for. And prices reflect the savings.
In the Amateur Radio sales businesses, direct orders are drop shipped from manufacturers' warehouses, with less need for middle man warehouses, or retail space. A few stores and hamfests to show off product to an exclusive clientele, and the rest is direct sales, at increased profit for the manufacturer/distributor, and lower prices for the customer. Hell, the ICOM Funmobile makes ICOM dealers pretty unnecessary. (Watch for more of them to drop ICOM products and for a handful of ICOM internet sales centers to take the bulk of their product sales.)

It makes sense, therefore, NOT to have retail stores unless traffic still exists to support them. Such was not the case in Miami. Or to a large extent here in Chicago. This is because the prices are better, and there is no heavy lifting when you buy over the internet. Watch for this philosophy to expand.

But that doesn't mean that ham radio is dying. The termination of the legendary HTX 202, doesnot, perforce, indicate this claim either. The HTX 202 is a very old model. Much like the R-71 is a very old GC receiver. It is time for more advanced product to take its place in the marketplace. ICOM hasn't replaced the R-71, if you discount the short lived R-72, and RadShack needn't replace the HTX 202. That niche will be filled with other, newer, better equipment.

And that Radio Shack is getting out of ham radio is no surprise. Have you been to a Radio Shack lately? Look around..how many of the slack lower lips belong to hams? Radio Shack has slowly run off their ham radio market in favor of computer, DSS, and mid range audio, because they believe that's where the money is. Notice that there is nothing in a Radio Shack anymore that requires a knowledge of electronics for use. Ham Radio has been carried for a long time, only as a slender contact with their Radio Shack heritage, nothing more.

Finally, consider the horrible things said about Radio Shack on this and other NGs in recent years. Genuine complaints from people who had a working knowledge of electronics. Many of them have been taken to Tandy Corp in the forms of letters and phone calls. What would be the fastest way to curtail those types of complaints? Answer...give those kinds of customers, no reason to come into the stores.

Its a shame, really. That such a long standing advocate of the hobby, should finally be abrogating their position of support. But that's life. It may mean that ham radio is indeed evolving. But then, that was always true. It doesn't mean necessarily that hamradio is dying, any more than AES closing its retail stores means that ham radio is necessarily dying. While that claim may ultimately be true, it more directly means that ham radio is changing...and the methods of serving hams is changing as well.

If the concern here is over the possible death of ham radio, then it becomes incumbent on working hams to spread the passion for this hobby, and take this evangel to everywhere, and anywhere it might be received. But from where I sit, given that there is a hamfest, quite literally, every weekend within driving distance of my house, the supposition that ham radio is dying, seems a bit overstated.

My advice on an HT is the Alinco DJ-191TH. You will not be sorry at $169.00. I see NO reason to spend more on a HT since you can get 55 watts of power in a great mobile for $199.00...why spend more for 5 watts!? And after having used the Rat Shack 202 HT...I would NOT recommend it to anyone. It is Extremely user UNfriendly and poorly made. The Alinco DJ191TH is solid, very easy to program and has a large display. Heed my warning about the "shack" radio....by the way this is the ONLY Alinco product I would recommend.
73...Doug...looking for a mobile?...After hands on w/ the Kenwood 261A and FT-2500M...the Icom IC-2100H 2 meter ri blows away Kenwood and Yaesu in features, ease of programming, and heat dispersion...and they are all $199.00.

After listening to shortwave broadcasts for a year of so on a Knight-Kit Star Roamer, I got my license in 1968.

My first rig was another Knight-Kit, the T-60 60 watt (supposedly) CW transmitter and a borrowed Hammarlund HQ-110 receiver. The most I ever really got out of the T-60 was about 25 watts, but with it, a W3DZZ trap dipole, and my three 15 meter crytals, I managed to work about 20 or so countries.

Despite the wrath and disdain such comments seem to draw these days, I got started with CW back then and still enjoy it today.

Word usage constantly evolves. "Gay" didn't always mean homosexual.

When I use the term "racism", it's applied to cultural as well as hereditary differences that people have. You may not think it's correct, but the usage in this context is begining to be accepted.

Source record: 157057

I would empasize, as others have, that this is one hobby that can be thoroughly enjoyed without spending much money at all. You can also start out blowing thousands and find out later it isn't what you thought...or more accurately, not so much fun for the thousands you blew. Save your money for family, or computers, or bathtub toys, and/or whatever other interests, and spend only what is necessary. Stop laughing...I am serious. You will enjoy the hobby much more when you know you are doing Exactly what someone else is doing with a 3-5 thousand dollar rig, no life, and a fat gut, and you spent very little. My "radio room" is very accessible to all...don't let the hobby shut you away from your family, kids or other interests. Ever notice how the internet can "suck you in?" Here is my equipment list:::DJ-191-TH (Alinco) 5 watt HT/ $169 IC-2100H (Icom) 55w used as base/$199
TenTec 555 Scout HF rig w NB/$569
500 ft roll of 10awg copper cable/$36
2 meter Discone ant on roof mast/$59
10 foot 1.5in mast and hardware/$9
Schram-Tenna dipole centers/$24
RG8 50 ft coax x and adapters/$50
555 Scout band modules/$58..... 2meter SWR/power meter/$39..... 2meter mag mount for HT/$39 (used in car)...25 amp power supply/$119..TOTAL $1370. And I splurged on new radios. I also splurged on the mobile/base since I was using the HT as a base/mobile and it worked great. I still use the HT as a mobile. 5 watts hits all the repeaters fine in the city. I spent MORE than I needed to to enjoy this hobby, but, what I could easily afford. If you spend more, I hope you have lots of money to waste...oh I forgot the code key at $39....and if you are a no-code Tech, then $199.00 for the 55 watt Icom and related antenna(s) extra. All the best...Doug KD5FJE...dipole man ungrounded...the voice of reason speaks. HA! Happy Thanksgiving!..P.S. Stay away from the "rat shack" 202, 242...they sell Ok shortwave receivers (made by Sangean) but not Ham tranceivers, despite what people "used" to think, compared to what's out there now (better and cheaper). In short, I have found RS products (except s/w) to be junk...I'll go away now. .....Visit my website: see a naked monkey sitting on a naked horse; read how I hate ham radio; see all my awards for electronic machines.....Blozo..A A plus certifiable candidate for the sanitorium, teacher of little boys health science, all around imbecile, electronic wizard when it comes to health sciences, winner of "best-endowment" award for a contribution to the Society of Ham Radio Hunks..73 :-)

Hes been doing this for quite a while now. It seems to be the only thing he can do. I guess he sold all his ham gear because he probally brought his attitude (that he shows here) to the ham bands and nobody wanted to talk to him.

Later..

Save the Ham bands....shoot a CB'er

>years ago?

Nope. Radio Shack's 10m rig (HTX-100) was a cousin of the incredibly popular
Uniden HR-2510. Unlike the 2510, however, the RS version was only capable of
USB and CW. No AM or LSB. This made the radio worthless to CBers and
freebanders...which resulted in poor sales and the discontinuation of the model
after only a few years.

I think I'll take a pass on that.

>They were talking about the a.hole who calls himself

There you go doing the same thing you were complaining about. Is the period better than the asterisk somehow?

I had a girlfriend once who used to complain, then go on to do exactly what she just got through complaining about.

>RG-58u who is a certain Hitler Herbie lover who lives in

I don't understand why you have such a problem with them there. They've become pretty scarce in this area over the last couple of years, leaving just a few who are really good at hiding and keeping quiet.

SB DX @ WW $OPDX.385
Ohio/Penn DX Bulletin No. 385

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 385
BID: $OPDX.385
November 27, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K3ZO, W3UR & The Daily DX, KR3I, K4YT, N6FF, N6RT, NH6YK, BA1DU, DJ5AV & DX News Letter, FK8HC, G4BUE & DX News Sheet, HA1AG, HS0/G3NOM, LU1DZ, PY1KS, RA6CO, SM7PKK, VK2SG RTTY DX Notes, ZP5AZL and ZS5BBO for the following DX information.

EDITOR'S NOTE: Due to the upcoming CQWW CW DX Contest and some additional announcements of stations participating in the contest, I felt that an earlier release of the OPDX bulletin was warrented.

5X, UGANDA (A dedicated operator!). Mats, SM7PKK, will be active as 5X1Z in the CQWW CW Contest. He is currently on a mission to Tanzania and will arrive back in Uganda (hopefully) 1 hour before the contest. This definitely means he will not be set up for a multi-band effort, so he will stay on a single band, either 10 or 15 meters.

7Z1AB ACTIVITY. Karl, K4YT/4X, reports he was in Riyadh during September and was able to operate sometimes after work. He states that the station has not been shut down as reported earlier, just no operators. He talked to Johnny O'Dell, KA5BQM, who is one of the communicators at the Embassy, and was told that he has lost interest in Ham Radio. Johnny did say that if any TDY'er comes to the embassy they can use the station. The station is located in the basement of the embassy. There are 3 radios with amps and a 6 element tribander. Unfortunately, non-embassy employees are not permitted on the compound unescorted and therefore cannot operate a ontest without, for example, Johnny being there. Karl states that he will be going back to Riyadh early next year and will try to do more operating. There are about 10 people in the Embassy's radio club, but all work for private companies and therefore cannot have unlimited access to the station. In case anyone wants to contact Johnny, he can be reached at Unit 61307, APO AE 09803-1307.

9M6, EAST MALAYSIA. "The 59(9) DXReport" states that Phil, G4JMB/VR2CT, will be active as 9M6CT from Kota Kinabalu, December 7th through January 16th and again in March/April. QSL via G4JMB.

9M8, PULAU SATANG (EAST MALAYSIA). Hans, DF5UG, reports that his OC-165 operation is cancelled due to bad weather. He hopes to return in March/April 1999.

A6, UNITED ARAB EMIRATES. Bernie, editor of "The Daily DX", is in Dubai. He has been busy visting with Ali, A61AJ, and his family. Bernie has been able to get on 160, 80, 40, 30, 20 and 10 meters at several times during his stay. He states to look for A61AJ to be extremely active this weekend on 10, 15, 20, 40, 80 and 160 meters in the CQWW CW DX Contest as a Multi-Multi effort. QSL via W3UR. He mentions that he still does not know his exact return date.

C4, CYPRUS. The "DX News Sheet" reports that Ivo, 9A3A, will be active in the CQWW CW Contest as a Single Op/All Band entry as C4C.

FK, NEW CALEDONIA. Look for Franck, FK8HC, to operate in the CQWW CW Contest. The operation is planned to begin November 25th or 26th. He plans to enter the contest as a Single Op/Single Band on 10 meters.

FT5Z, AMSTERDAM ISLAND. FT5ZH is now active on the air with two stations. Their planned activity will last until December 23rd. They will operate on CW/SSB/RTTY. They have been heard on 14215 and 21295 kHz the past few days. The "VK2SG RTTY DX Notes" states to "Expect RTTY from them during the 3rd and 4th week of operation." QSL via F6KDF, either direct or via bureau. OPDX InterNet Subscribers will receive an addtional bulletin containing the latest press release by Jeffrey Pawlan, WA6KBL.

HS, THAILAND. Just a quick reminder for the upcoming CQWW CW Contest that the stations in Thailand have special permission to operate on 80 and 160 meters this weekend. Normally stations in Thailand are not permitted to use those bands. They will be limited to 3534-3536 KHz on 80 meters and 1840-1850 KHz on 160 meters. There will be plenty of stations active especially some newcomers. Look for E22AAA to be activated by a bunch of newcomers with the help of HS1CHB. This group (other than HS1CHB) have just upgraded to HF status, so be patient with this one. QSL to HS1CHB. In addition a number of hams will operate their individual stations. E21IZC will be one of them. Look for HS5AC to be activated by HS1NIV and other students at Chiang Mai University. QSL via W1ZS. Other stations to enter will be: HS0AC (QSL Manager HS0/G3NOM), HS7AS (QSL to P. O. Box 7, Sripachan, Suphanburi 72140, THAILAND) and HS8AS (QSL to CBA).

NEW 10 METER BEACON. Alberto, LU1DZ, GACW Coordinator, reports that on December 7th, during the Martin, LU4XS, 77th birthday, he will be visiting Martin in the southern part of Tierra del Fuego Island to join with Jorge, LU7XP, in the installation of the new GACW beacon. The location will be Moat Ranch, Moat River and Beagle Channel (150 km. west of Ushuaia city in Tierra del Fuego Province). The transmit frequency will be 28.190 kHz. The beacon will send out a 45 second message saying, "LU4XS GACW LAT LONG

and LOCATOR", every 90 seconds. The power will be 3/4 watts output and the antenna is an inverted VEE (9 meters high). Every correct report of the message will be confirmed with a postal card. Please send your card via bureau or to: GACW, Box 9, 1875 - Wilde, Buenos Aires, ARGENTINA

NH4, MIDWAY ISLAND. Ted, NH6YK, will be back on Midway from December 20th to January 2nd, as NH4/NH6YK. He will have more time to operate than on his last two trips. Activity will be on HF SSB and 6 meters. There is a slight possibility of RTTY. QSL via the home call.

P4, ARUBA. Ed, KR3I, will be operating as P40I from December 1-8th. His activity will be on 40-10 meters and also 80 meters, if there is an antenna available. Operations will be mostly CW with some SSB in the general bands depending on condx. QSL via KR3I/bureau (He will be getting cards printed after his trip!)

PY, BRAZIL. Alex, PY1KS, states to look for him in the CQWW CW Contest as a Single Operator/All Band Low Power (SOLPAB) entry.

QSL INFO AND NEWS......
OOOPPPPSSS! I guess we jumped the gun last week. The logs for the BQ9P aren't up just quite yet. Steve, KU9C, is typing furiously to have them on-line as soon as possible. Stay tuned! Also, the URL address we published last week was missing the first two slashes. The address should be: http://www.qsl.net/bq9p/

The QSL manager of B1Z for CQWW CW and the SSB Contest is JA4HCK.

NEW QSL MANAGER. The team of RM6A now reports that they have a QSL Manager and this is Joe, W3HNK. Joe will be able to provide QSLs for the 1998 CQWW CW Contest and after. For all contests before the 1998 CQWW CW Contest must be QSLed to: Sam Dubovtsev, P.O.BOX 600, KRASNODAR, 350062, RUSSIA

NEW QSL MANAGER. Zoli, HA1AG, informs OPDX that he is the QSL Manager of Chuck, T32NCC. Chuck lives on Fanning Island (OC-084). His operation has been approved by the IOTA Committee. The QSL cards have been printed and Zoli has received the first logs from Chuck. Please send your QSL requests to: Zoli Pitman, Somogyi Bela ut 18, Gyor 9024, Hungary. In the last two editions of the RAC, Zoli's zip code was given as 9300. It's wrong! QSL requests sent without SASE or via the bureau will be answered via the bureau. Anything in excess of the needed return postage will be sent to Chuck to improve his conditions. 1 USD or 1 IRC covers the return postage. Donations of any kind would be gratefully appreciated and will be forwarded to Chuck, T32NCC. He must make frequent repairs to his equipment due to the harsh environment. He's using a 4 year old TS-50, which is already rusting internally. His primary need is equipment: antennas, coax, connectors, etc. Zoli can arrange shipping. Please note that there is no E-mail and not even a telephone on Fanning Island. The mail is picked up every 3-4 weeks by cruise ships and taken to Hawaii. After Zoli receives the logs, he will send out the cards within a couple

of days.

V6, MICRONESIA. The "DX News Letter" reports that Ann/WA1S/V63HO, Charlotte/KQ1F/V63HC, and Paul/K1XM/V63YP, are on Kosrae Island (OC-059) from now until November 30th. Look for them to be on Pohnpei (OC-010) from November 30th until December 3rd and on Truk Island (OC-011) from December 3-9th. They will sign V63X during the CQWWDX CW. All QSLs via KQ1F.

VK9L, LORD HOWE ISLAND (Now active). Remember to look for Nick, VK2ICV, to be active from here as VK9LX during the CQWW CW Contest. The team that is there will be active now until December 1st. Reportedly, they have two stations up and working. Operations will be on 160-6 meters on CW, SSB and RTTY. Their Web site which contains propagation forecast is at:
http://qsl.net/vk9lx
QSL via VK2ICV, Nick Hacko, Box 730, Parramatta, NSW 2124, Australia.

VR2, HONG KONG. Look for Frank, DL3MFN, to be active as VR2FD or VR98FD for the next 2 years. Activity will be mainly 17 meters and 15 meters. QSL via DL3MFN to the DARC bureau.

XT, BURKINA FASO. Michel/F5RLE and Joel/F5AOW will be active in the new year between February 7th and March 1st, as XT2DW (on SSB) and XT2DM (on CW), respectively. They will be active mostly on WARC bands. QSL via F5RLE.

XZ1N, MYANMAR (Update). The station XZ1N has reportedly logged a little over 7,000 QSOs as this bulletin was being prepared. There will be another 7 operators arriving on Friday, November 27th, to augment the 5 that have been operating and constructing the stations. They are currently running 3 stations, and will have the 4th up and running on Friday. Remember to look for them during the contest this weekend.

ZK3, TOKELAU ISLANDS. Lee, 3D2VA, reportedly has talked to Ron, ZL1AMO, during this past week, and states that Ron is going to try and go to Tokelau again sometime in December. Hopefully transportation will not fall through this time.

ZP, PARAGUAY. Tom, ZP5AZL, reports to OPDX that he will be active in the ARRL 10 Meter Contest December 12-13th, with the callsign ZP5Z (HP). QSL via W3HNK.

ZS3, SOUTH AFRICA (Operation Cancelled). Edwin, ZS5BBO, reports to OPDX that his planned expedition to ZS3 (refer to OPDX.378) from Kimberley, the "City of Diamonds", in December has been postponed. He states that he needs a break from all the Amateur Radio activities/events that he has been participating in since the CQWW SSB Contest and also ZS75SIG operation. He wants a break without amateur radio during his Christmas holiday. Edwin will, however, go to ZS3 during 1999 sometime and has kept the callsign ZS3MM. He is very sorry if he had put up the hopes of many operators who were wanting to work him from the ZS3 area. Also, Edwin sends a note of thanks to all the operators who have supported the ZS75SIG special event station. This call will still be used until the end of November, 1998.

QSL cards will only be sent out in late January, 1999, due to him leaving on holiday in mid-December.

MORE CQWW CW DX CONTEST STATIONS (Quick List). The following was put together from various bulletins (OPDX, DXNS, DXNL, ARRL DX Bulletin, The Daily DX, National Contest Journal, QRZ DX...(ed. GEEE... I hope I named all of them... TNX to all).....

Let's change the name of this group by cutting it in half calling the lower half "The bullshiter 's part". This way I can stop when I get 1\2 way through. Of course the top 1\2 would be for HAM RADIO the good half.

Don't worry about the CBers getting on the ham bands . There aren't any left
.
Don't worry about no code . 2 meters is dying or dead in some areas.
Upgrading my license / tech +/ so I can talk on more H.F. frequencies is a
good idea but it's 10 years too late .
Everyone is so concerned about keeping everyone else out of this hobby that
they haven't noticed that hardly anyone is trying to get in .
Oh well .....

Are you saying that a trucker on 2m is automaticly a bootlegger? I am a truck driver and a ham. Not a bootlegger. I had my first radio for a week waiting for my ticket to be posted and only listened to it. I think you owe all the legal truckdriving hams an apology.

The inconsistent chemical mix and production variables within a production run throws all the small sample tests into a cocked hat. On average, large quantity samples, there is not much difference between the major brands. The observation that capacity is related to weight is generally true, the best batteries are always heavy, but not necessarily vice-versa. Some store brands are good buys also, but hard to predict which. Now, about storage. You people up north don't have much to worry about, but here in South Texas, where the night time temperature stays above 80 deg. F all night for most of the summer, refrigeration is a definite plus. Just stay above 32 Deg. F. There are a lot of quirks with batteries. I was involved with a system which used silver oxide watch batteries with a few nanoampere load. So low we couldn't accurately measure it directly, had to use substitution techniques, then the chip was light sensitive, so that further complicated matters. Anyway, under this tiny load, the batteries consistently outlasted unused spares in storage by a life factor of 2. Go figure.
Happy Thanksgiving,
Crazy George

I don't agree with *everything* that Burt posts, nor do I like the way he says the things I do agree with, but he tells it like it is. The above attempt at "light hearted humour" is actually racist. This is an international newsgroup, and there is no rule for only English to be used. The poster asked for information about buying a scanner, and that they were basically a newbie. What happens? They're made fun of because of their language. Racism, pure and simple. -- Tom - N8ECW

3897. ICOM 735 Help needed

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-26 00:00:00 UTC
From: n5lbz@aol.com
Message-ID: <19981125200709.29783.00000774@ng111.aol.com>
Source record: 157135

HELLO I JUST PICKED UP A IC-735 AND NEED TO KNOW WHICH PINS
I CONNECT THE 12V POWER TO. THANKS STU N5LBZ........
EMAIL ME AT scole@juno.com

3898. More Proof that Ham Radio is Dying...Radio Shack Closes Out Their HTX-202s

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-26 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <19981125203136.27054.00001393@ngol02.aol.com>
Source record: 157136

Just got the new Radio Shack flyer today. On page 35, we find an incredible deal on their famous HTX-202. Only $129.99 while they last. This is not a sale, but a CLEARANCE, and is marked as such in the catalog. I inquired at my local store as to wheher the HTX-202 was being replaced by a newer model and was told "Nope. We're closing 'em out. Radio Shack is discontinuing all their ham stuff." Why? "Nobody's interested in ham radio anymore."

Last year, AES closed their Tampa Bay store. This year, Radio Shack discontinues their HTX-202, formerly a very popular radio. Ham radio is dying. Is there really any question?

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Check out www.kenwood.net. They have a link to a company that supplies parts to Kenwood rigs, old and new. I believe the companies name is PacificParts, or something similar, and I have ordered from them in the past with excellent results. I needed parts for a TS 440S and more recently a fuse holder for a 930S. They also have electronic components, such as transistors, chips, etc. You can check if they have your part in stock right on their website, but I believe that you need the KW part #. Hope this helps!

Wait a minute . . . you mean to tell me you actually believe what the sales "droids" at Rad Shack tell you, Drew?? I believe your trust in the wisdom of the sales clerk at the local Rad Shack gives us some insight into your intelligence level. I've encountered Rad Shack sales droids who hardly know the difference between a ham transceiver, a CB transceiver, and a shortwave radio. Get real, Drew.

3917. How much better is the Icom 746 than the 706MkII w/DSP?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-27 00:00:00 UTC
From: Tom Norris <badger@telalink.net>
Message-ID: <SqD72.1637$tB2.3825803@news2.atl>
Source record: 156855
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,alt.ham-radio.hf,alt.ham-radio.ssb

Already have a 706MkII with DSP, and seems to be a great radio.
Use it for ham bands and SWL, the narrow SSB filter is a must.
BUT how much better is the 746 than the 706MkII? I know both
have DSP (well, mine does after I added it) and the 746 is a bit
larger and puts out more power on two meters. How do the
two receivers compare?

Can the IC-746 be modded for out of band TX? (no, not for CB!)

What other benefits are there to getting a 746 instead of another
706MkII (or a MkIIG when/if it comes out soon)???

Thanks

Please email me directly

>
>Your (false) second sentence above invalidates the remainder of your post,
>Peter. The HTX-202 is being replaced by a dual-band HT.
>Jeff KH6OO

You know, Jeff, I did ask about that very point. I asked Radio Shack. That I may have been misinformed is not surprising. However, the balance of the post is not invalid. My points still stand. The hobby is evolving and that business are closing is NOT and indication that the hobby is dead....only different, working under different criteria.

However, this debate about RS and the hobby has raised some interesting questions. How is it that not only management at the store level but also management at the distribution level present conflicting stories about product development? That is not the sign of a committed purveyor to a knowledgable customer base. It is a sign that the commitment to the hobby is flagging. And an exit may not be far behind. Perhaps not immediate as you have pointed out here, but with the commitment down and the direction of the store's apparent philosophical shift in recent year, it ,may only be a matter of time.

But the coming and goings of Radio Shack in the hobby do not alter the veracity of the statements in my post.

3919. AN INTERVIEW WITH HITLER (Note:This is Fiction)

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-27 00:00:00 UTC

I found this in another NG, thought it might add to the enjoyment a little.....

AN INTERVIEW WITH HITLER

By Jeff Penrod

This month, we were able to catch up with one of the first candidates to throw his hat in for the 2000 presidential race. While we haven't heard much from him over the past few years, he was once a household name across the country.

JP: Well Mr. Hitler, I can't really say it's an honor to speak with you. Many in this country find you thoroughly repugnant. Why have you come out of hiding after all these years?

AH: Please, spare me the theatrics. Yes, I provoked a war and embarked upon a genocidal campaign. But you Americans have little room to criticize. Your nation has had more than its fair share of unprovoked wars, most notably the Spanish-American and the "police action" in Vietnam, not to mention how Woodrow Wilson maneuvered the US into WWI. And as for concentration camps and genocidal campaigns, you need look no farther than Japanese Americans in WWII and the American Indians for similar policies implement by the US. Especially the Apaches, who were the victims of several genocidal campaigns. However, I must say that I admire how your intelligence organization's efficiency in propping up puppet regimes in foreign nations. If I had such an apparatus at my disposal, WWII would not have been necessary.

As for why I have come out hiding, I have been monitoring the US papers very closely, especially the "letters to the editors" features. In both of your papers, I see letters on a daily basis that square with my political philosophy. The time is ripe for me to return to politics.

JP: So you're running for governor. I assume that you are running as an extreme right wing candidate. What has the Republican National Committee said about you running against Neil Bush, Steve Forbes, or whomever else they anoint?

AH: Republican? Don't be ridiculous! While the Republicans support many of my ideas for public subsidies of business, their platform doesn't nearly go far enough. I am running as a Democrat.

JP: You're kidding of course!

AH: No, I am dead serious.

JP: Very well then, I'll ask you some questions that will be sure to show the absurdity of this. First one, what is your position on school choice and vouchers? This is almost a litmus test.

AH: I am opposed to them. State control of the schools is of paramount importance. How else would it be possible to indoctrinate our youth on the needs of the State and Party?

JP: Hmmmmï¿½that's not what I expected. How about volunteerism? Our current President has made this an issue of great importance, and some schools have made voluntary community service mandatory. I'm sure that the cold-hearted Nazis would have nothing to do with this.

AH: Are you kidding? It was a cornerstone of my "Hitler Youth" program. Providing the volunteering was done for, what is the wordï¿½ politically correct ï¿½ causes. Ha ha! Of course, political correctness changes with the prevailing political climate.

JP: What about funding for the arts? I don't recall that being on the Nazi hit parade.

AH: The Nazi party was a strong supporter of opera and political artwork. Much like the National Endowment for the Arts does in this country.

JP: I can't deny that. How about Health Care? We in America are very conscious of the need for state sponsored health care. I remember all kinds of barbarous medical experiments being performed by the Nazis. Don't even try to tell me that you are in favor of government run health care.

AH: I most certainly am in favor of it! Of course, when you have State run health care, it is necessary to ration the amount of care, or else everyone with a runny nose will be showing up at the clinic. If you treat anyone who wants care, it will pauperize the State! [banging fist on table]. Those experiments were done only to keep down costs! Very much like your Tuskeegee syphilis experiments.

JP: I hate to admit it, but you're right. We did allow medical atrocities like this to occur to members of certain racial groups.

AH: As I was saying before, you have little room to criticize me. As your own President Kennedy said: "Ask not what your country can do for you, but ask what you can do for your country."

JP: [sarcastically] Very nice. What about State run daycare?

AH: We had it in Nazi Germany. It was necessary to increase the national output. It is wasteful to have women at home, where they cannot contribute to the greater glory of the State by paying taxes. In addition, it provides an additional opportunity to indoctrinate our youth.

JP: What about hate crimes

AH: Such as calling someone a Nazi? Ha Ha! Seriously, though, in the Third Reich we punished people for thought crimes, in the very same fashion.

JP: What about affirmative actions? I know that you won't support that!

AH: The Third Reich was one of the biggest supporters of racial quotas in history! Just because you change the group that benefits from race politics doesn't change the fact that you are supporting race politics. But I must

admit that I am uncomfortable supporting such policies in America, since I am not in a favored class. However, I'm sure that much political hay can be made from this nonetheless.

JP: One of the big issues in the upcoming gubernatorial race is concealed carry. The Nazis were really into armament, so I know that at least I'll get you on this question.

AH: Wrong! The Nazi Party strongly supported gun control. In fact if you look at your 1968 Gun Control Act, you can see that it was almost taken line for line from our 1938 Gun Control Law. After all, the State can protect those who merit protection.

JP: Well Mr. Hitler, our time is almost up. It certainly appears that your are a Democrat in good standing. Do you have any further statements?

AH: Yes. I would like to say that I as head of the Nazi Party was staunch supporter of socialism, just like the Democrats are in America. In fact Nazi stands for the National Socialist Party. It does both the Democrats and the Nazis a disservice to compare Republicans to Nazis. While the Republicans support many of our tenets, they don't come anywhere close to the Democrats in subjugating the individual's needs to those of the State. Or Society, or social justice, or whatever you call it these days.

America is only on the verge of reaching its full glory of the Omnipotent State! Keep up the good work!

Remember to vote for me in November 2000! Seig heil!

This interview is of course fictitious, and is meant not to cause offense to any that have lost relatives to totalitarianism regimes. It is meant to offend those who have contributed to the nazification of America.

Well...someone e-mailed me a wav-file of Rich and his racism/bigotry. I thank you. But I've already been a witness to it. Others need to hear just what this ass-of-a-man said last Sunday afternoon.

So if you would, please, post the wav-file to this newsgroup. Or....let us know if it's posted it at a website so we all can go to and take a listen....

Oh, I am the very model of a modern Amateur General.
I turn on my new radio and send signals quite ephemeral.
I bought an old brass straight key and my fist is now exceptional.
Oh, I am the very model of a modern Amateur General.

I turn on my two meter rig and say that I m here listening.
I carry my black HT out to Four Weddings and a Christening.
I drive to K2KJI s garage and there with glee my eyes are glistening.
Oh, I am the very model of a modern Amateur General.

I spin the dial from dusk to dawn across the sagging low bands.
My children - what s their names now? - beg to make a snowman.
My spouse says either she or that radio s gonna go man.
Oh, I am the very model of a modern Amateur General.

I m really gonna miss her as she tossed her head quite prettily.
But chaps that write on packet turn their phrases oh so wittily.
There s a contest coming up and I m starting to get jittery.
Oh, I am the very model of a modern Amateur General.

I have a fascination for all things electronical.
I log on to the Internet and hunt for things Veronical.
I flame the geeks in cyberspace for being so sardonical.
Oh, I am the very model of a modern Amateur General.

I read CQ and QST because they are so factual.
I rack up points at Field Day cause my accent s quite theatrical.
I joined the Quarter Century Club as I m somewhat geriatrical.
Oh, I am the very model of a modern Amateur General.

Yes, I am the very model of a modern Amateur General.
Yes, he is the very model of a modern Amateur General.
Yes, he is the very model of a modern Amateur General.

What if the ham stares the cop in the eye and lies like a rug, "Nope, not me. Haven't been on the air" or "I refuse to answer that question based on my rights under the Fifth Amendment". Seems to me the burden of proof then falls back on the Gendarme and he's flat outta aces, no clue what to do after that and he has no resources available to pursue it even if he wanted to.

A "long splice" as in splicing wire rope of cable. It involves "un-laying"
strands from one side of the splice and replacing them with strands from the
other side... I doubt you'll measure much difference one way or another. Why
not just give them a twist and a dab of solder - or - buy a single, unbroken
length of wire???

3928. Amateur radio will never die.....

Amateur radio will never die.

It is constantly changing.

It only 'appears' to be dying because of all the other communications devices that are now on the market.

In our passed, there have been a small percentage of amateurs who have been the arrow of our technical development. I believe the same is still true today. A small percentage of amateurs are constantly expanding our horizon.

I would not be surprised if the internet is a wire spin-off of packet radio.

I wish I still had my first rigs as well. In 1977 I purchased a Hammarlund HQ-180AC receiver and a Hallicrafters HT-32B transmitter. They both looked new. Hundreds of hours were put on them, both CW and phone. I am still tube-bound today with Drake B- Line, as I like them very well. I do miss though, the "big" rigs I started with.

3932. rotator broken??

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-27 00:00:00 UTC
From: o <millsd@river.it.gvsu.edu>
Message-ID: <Pine.HPP.3.95.981127192454.17340C-100000@river.it.gvsu.edu>
Source record: 156870

Dear possibly informed person:

We bought a big rotator (G-1000SDX, I think. I'll double check tomorrow) for our clubs' new quad (6 sq ft). It's the only antenna on the mast. Under normal conditions things would be beautiful. Even under unusual conditions things have been fine. We had extremely high winds here in September (100 mph) and our antenna system survived. However, recently we had another unusual wind storm. The winds were "only" 50 mph but lasted more than 24 hours.

Now our quad weather vanes. We can turn it with the rotator control, but it struggles against a breeze. Then it finds it's own direction again.

Does this sound like something we can fix?

I've e-mailed <yaesutech@worldnet.att.net> but they don't response.

Please e-mail me with info. I might miss a posting to this group.

Thanks!

73

I have found that it is not always as difficult to track down such persons as they would like to believe. One clown pestered me in this way for several days in a newsgroup like this, until he received a personal message from me containing all of his data from the Department of Motor Vehicles as well as his Social Security number and telephone number. I didn't SAY anything in that post, but I assume he got the "message", since he immediately disappeared and never pestered me again. One thing that probably helped was that he only lived a few hundred miles away.

As for credibility, I judge that by content, not stated identity or lack thereof. You're absolutely right of course that the cowardly types who snipe at others from hiding are usually full of farina and are best ignored. - But not always.

Just about anybody is capable of being "right" at least part of time, and no-one is "right" all of the time.

Like most of the people here, when I want to be really impressed by the intelligence and good sense in a post from this newsgroup, I read one of my own... And you read yours, and Joe-Willy reads his, ect ect, and so on.

> Funniest damn thing I've ever heard! Someone was saying "Wheeeeere's Casey
> Thrower?" in a squeaky, Marvin the Martian-type voice and then playing what
> sounded like a foghorn in the background!

It's the same guy who used to yell "Ten Thousand Five
Hunnnnnnnndred Dollars!" (known affectionatly as Mr. 10-5)

Thanksgiving night on 3901 was quite amusing too! Dumbass Donny was
monologing in what sounded like a drunken stupor. N3cnd was very amusing
with many good one-liners and Anthony Perkins "house-on-the-hill" laugh.
As a bonus, Marion (the guy who used to talk with Babey Huey) showed up
and was thoroughly roasted. Apparently Marion was in a bad mood for some
reason, like most cloistered sociopaths usually are around the holidays. He used alot
of potty-mouth speech relating to the acts of male homosexual erotica, which
was quite curious as a few months ago he stated that he liked to goto "alternative
lifestyle" drinking and dancing establishments, although he emphatically claimed
that he was NOT gay. (I'm still trying to figure this out - this from the same guy who
was Baby Huey's radio preaching & bible thumping buddy) Oris was in rare form
this evening, and he stole the show - thanks Oris! I was laughing so hard that
I nearly spilled my freakin Pepsi all over my 850!

That's all - time to goto back to listening the best show on the ham radio dial :)

Your mental shortcomings even pop up on holidays eh Burp?

My local newspaper and local ABC affiliate both wished all a "Happy
Thanksgiving" today. Perhaps you should write ABC news and tell them
of their impersonal improprieties?

What lies in the soul of a man that condemns others for their seasonal
best wishes ? Is your wife aware of your mental problems ?

From: jake@trib.com
Message-ID: <365e2b2c.8611196@news.trib.com>
Source record: 156966

Hello Fellow VX-1R users...

After installing the AllowAnyBand mod inmy ADMS software, I found thet I could not transmit repeater splits. If I put in 449.4 with a minus offset in the VHF band the radio would not transmit on the 444.4 freq. To fix the problem I went into the software and selected the problem repeater frequency. Rather than select the minus offset (under Transmit Offset) I selected TX Frequency. Then manually enter the TX frequency under Transmit Frequency. Now the radio scans and transmits a UHF freq while in the VHF band just fine. Hope I discribed this OK...

Always looking for more mods...

I certainly don't condone racism, but this guy is a hypocrite. He chatises Rich Whiten for a racial slur and the sewer on 75 meters, and then posts profanity. Not only that, he claims that amateur radio is his life, yet hides behind a pseudonym. Another example that proves Burt Fisher is right. -- Tom - N8ECW

You've got this one right. No one's impressed with ham radio anymore. So what if we can talk around the world, any kid with a computer can do the same.

Two meters isn't dead around here but is unfrendly to newcommers. Out of three of us who took the test three years ago I'm the only one who has stuck with ham radio -- the other two are on CB. (I was a ham back in the 1960's so I knew what I was getting into.)

I'm not against CW. For that matter, I'm not against spark transmitters either, but it's time the FCC realized that things in the world of electronics have changed. Why insist on an out dated mode, which once you have mastered, you'll never use?

Just my opinion!

3966. Computer for HF rig

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-27 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <365ECAB6.1253@dirtball.com>
Source record: 156983
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Hello all,
I'll trade a 486 persaio 924 computer for a good working Kenwood HF rig (TS 430, 830, 530, 140, 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte harddrive, keyboard and mouse. I will also through in a ICOM 27 2 meter rig with tone board and tone mic, and a KPC 2 TNC. If you have a TS 520 or TS 820 both with mic I will trade just the computer. I'm looking for another HF rig for 160 meters. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.
73 and thanks for reading,
Oris

No, but you can hear a close simulation at home by consuming large amounts
of beans, boiled eggs, cabbage and cheap beer.

> Heard a long-winded diatribe against "Captain Sodomy" earlier tonight on
> 3894.5. Is this a new player on THE ZOO, or just another "repackaging" of one
> of teh regulars?

It's a reference to someone they call "Captain Fruit", a name given to an un-ID'd
ham who has been a real pain in the backside to big al, k4oka. Capt Fruit/Capt Sodomy
has a real gift with words and whenever he gets on al goes absolutley bonkers!
Much fun to listen to - BTW, he refers to himself as "Capt Truth" since he claims to
live in the same town as oka and knows alleged details of his alleged sorrid past....
(in other words, it's just a new twist to the ongoing 3894.5 - 3901 soap opera, take it
with a grain of salt)

It is curious that someone was using the term Capt. "S" as last night one of the 3894.5
regulars was apparently quite toasted on ole red eye, in an amusing display of male
virulity on the air he turned up his mic gain all the way, un-zipped his pants and made
"thonk - thonk - thonk'ing" noises thru his microphone. He finally clued us in when he
said that the "thonk" noise was the sound of his banging of his *penis* upon the er..head
of his microphone........

Just another day at the office on 3894.5 / 3901 Happy holiday's Y'all!

I have the following for sale:

- Hustler 6-BTV HF antenna
- 6-band trap vertical, excellent condition

- Cushcraft AR270 VHF/UHF antenna, excellent condition

- New Wave Antenna, excellent condition
- Big Foot drive-on mount
- I think 50+ foot mast

Please make an offer for any of the above.

Thank you.

Hello
Thanks for reading. I have a dentron 160 10L amp. I want to replace the tune and the load capcitors. They have become teardroped and in need of replaceing. I don't know what the capcitace of these varible caps are. Dentron just gives them a in house part number, and they are;
Plate cap is a D-232 plate cap
load cap is a D-1500L load cap
I really would like to know where I could get these caps new.
Thanks for reading

5 wpm acts like a filter and helps preserve the integrity of Amateur Radio.

Have you ever followed the decline of 11m? It started out as some vary nice people but then no-license came into effect and right behind it no-regulating. listen to the local rag-chewing channel and you'll see what a mess it has become; especially along the can-us boarder.

On VHF you can get quite a lot of people with "superior" attitudes but at least their attitude's are limited to a smaller area due to the nature of VHF/UHF propagation. not to mention the "shit-disturbing" that goes on some times.

Take this kind of person and give them equipment that allows them to reach other continents and what kind of a mess could we have?

Remember other countries have different values and way's of looking at things in general. they also form an opinion about other countries based on what they are subjected to. can you imagine the opinion they would form about Canada if we let shit-disturbers talk over sea's? (the big mouth is always remembered)The more you reach out into the world the more diplomatic and responsible you should be (look at what the bleeding hearts have done for parenting in the 90's - would you have swore at a parent and expected to charge them with assault after they slapped your face? - now look at how much discipline the teenagers have today) think about it.

The code requirement means that you have been able to show discipline and hard work. Some people have a very hard time learning it, but just like other things in life the harder it is the harder you work at it until you are successful. Today there are a lot of useful items for learning code - tapes, computer programs, electronic tutors etc. the harder you work for something the more you'll tend to take care of it- the same goes for privileges

maybe it's time we stopped whining about it. If you want HF then put up and shut up - learn your code.

In one of his less lucid moments, "CBRAMBO" (Drew Durigan) babbled:

> While you're at it, how about a new screenname? Impersonating an
>elderly man like you are is not funny; it's sick.

Nah, I think I'll wait to change my screenname until you come up with a new screenname in another six months, Drew--because I'm sure you will. Your posts under your new screenname shouldn't be hard to spot: I'll just look for "THE OYE BOY's" name on the subject line, and the ramblings of some dork bragging about how he "flushed out" Eric Oyen in the newsgroups. Now THAT is an accomplishment to be proud of--picking on a blind man who made the mistake of embarassing himself in the newsgroups with an unfounded blackmail allegation. Your attacks on Eric Oyen (which anyone can look up in Dejanews) aren't funny, they're sick, Drew.
Talk about the pot calling the kettle black!!

"Where's all the RADIO CRYBABIES?"

From: markus@markus.org
Message-ID: <73mtrs$h9a$1@nnrp1.dejanews.com>
Source record: 156999

I'm exploring the possibility to build small, low-cost, low-power
440Mhz transmitters and transceivers. I would like to build some
sensors (temperature, etc) and connecting them wireless to my
pc for data collection. I know there are several commercial products
around using such a technology.
If you have some pointer to where I can find suppliers of relevant
chips, etc. please let me know.

Thanks Markus

I only attack the losers such as yourself. If you're such a big
success and hate ham radio so much why do you constantly come in here
and attack folks and show your mental deficiencies ? Do you get a
charge out of attacking young kids? Make you feel better? You
exemplify the social outcast label that you try and stick on others,
who would want to attend any social function with the likes of you?
You'd do something _ignorant_ and _outlandish_ just to draw
attention to yourself as you do in this newsgroup.

Yes on packet radio in order to see the message list I must see those stupid ass subject titles. I read them to be able to respond to the loser that posted them.

Bob how come you keep bragging about your "hot" wife but we never see any evidence?

Interesting, the store manager I for RS I see most often claimed an
assortment of New ham stuff was due out from RS in the 1st or 2bd
quater. He also mentioned that 202 would likely be closed out by the
end of this yearm or fist part of next. This in Oct, and behold they
are now clwoing out the 202

I had a Star Roamer! But my first rig was a little two-tube
super-regen my dad and I built out of the Handbook. I worked 18 states
and 7 countries with that little pup.

Then I got a Globe Scout and a National NC-303 (super receiver!).

3998. FS cheap 80's audio components

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-27 00:00:00 UTC
From: gp429@aol.com
Message-ID: <19981126212724.12042.00001165@ng98.aol.com>
Source record: 157094

I have the following items for sale:

maker description model price
comments

sony audio/video STR-AV300 $35
right speaker output does not
receiver
seem to work properly,
everything else seems to
work properly

pioneer 6-disc changer PD-M500 $45
tried it and works!

sony dual cassette TC-WR720 $35
tried it and works!
player/recorder

panasonic vcr PV-1366
$25 pretty sure it works

pioneer 6-disc changer PD-M401 $40
tried it and works!

sony dual cassette TC-W233 $20
tried it and works!
player/recorder

Yeah they are really cheap, but this stuff has been in my closet since the Eighty's. If you are interested let me know I'll tried to include the manuals and remote if I can find it. All are in that Eighties electronic black and have a digital display exept the TC-W233 which was my very first audio component back in 198--something :) anyway I hope somebody find some good use for this stuff. ***note*** I am willing to split the shipping but NOT the COD charge. E-mail me at either: gp429@aol.com or cdhoste@rocketmail.com

thanx

>If a ham radio store was offered as an IPO would you buy it?
>This will test whether you really believe ham radio has a positive future.

No. But ham radio store on the internet, absolutely.

Your premise does not take into account that there are now wildly successful alternatives to storefront retail. And they are burgeoning. Have you seen AES homepage lately? HRO? Universal or Grove?

Ham radio has a positive future, but like most businesses with an esoteric clientele, supplying that future is taking a different direction.

Keep in mind also that local ordinances, an homeowner's covenants are putting enormous restrictions on exteriour antennae. This has a large impact on the nature of ham radio. HF is simply becoming too inconvenient to do in a nice neighborhood. And do you really want to move into some of hte neighborhoods where exteriour antennae are not an issue? My neighborhood has begun to move in the direction of restricting external antennae, despite the fact that there are a number of well established HF hams here. In a court of law the hams would win. But who has the resources to battle this out in court.

So much of the activity around me is going VHF, and most of that is mobile. A lot of activity, but not a lot of home based activity. A lot of Ham, but a much different ham than we all knew in the 50s.

Maybe if the community stood up and took on these absurd covenants and restrictions, (fights in favor of which are funded by the cable companies, by the way--note the restrictions on exteriour antennae AND satellite receivers) the home based ham would have a chance to expand. Certainly the equipment manufacturers would have a stake in this, perhaps THEY could chip in for the fight?

If ham has been allowed to slip under cover..it is because the hams who were active when this slide began took a stand. Banding together offers strength in mounting a fight. Its time that some of this internal conflict was recognized for the cancer it is, and the focus is set on real threats to Amateur Radio.

Have you ever followed the decline of 75m? It started out as some very nice people, too. All of whom have passed a code test of 13WPM or better. Yet, a good night on 75m sounds worse than a bad day on CB Channel 19. Would you please explain how this is possible if, as you state, "5 wpm acts like a filter and helps preserve the integrity of Amateur Radio."

Anxiously awaiting your response.

And "they're."

How about "wind" (movement of air) and "wind" (a turning movement),
or "our" and "hour."

Worse yet is the Vietnamese language; it contains six tones, so that
for a given written word, it could possibly have six very different
spoken meanings, depending upon which tone one uses.

I have large transformer & Powerstat I'd like to sell. I'm not sure what the application is, but it looks like it is a "home-brew" variable power supply. It is all attached to a panel with 3 volt meters, a 110v outlet, a positive and negative connectors and a large dial. Can anyone one tell me what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x 6"D.

label info: As Isolation - 1KW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

-ERIC

4026. Downfall of Ham Radio?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-28 00:00:00 UTC
From: Trebb1@webtv.net
Message-ID: <7322-365FB836-11@newsd-231.iap.bryant.webtv.net>
Source record: 156893

As a licensed youngster in 1952, I recall the rush of listening to AMers on 75 Metes. They were respectful and well spoken, for the most part. But from there, standards degraded.

I've been off the air since 1993. Yet reading this NG tonight, I can see the downslide continue.

Though I've considered setting up, putting out my big 20 meter signal again, ham radio offers no draw to leap back into this lion's den of vitriol and vituperation.

"Very nice" means nothing. Nice is one of the most over used words.
Second you would meet some very cheap boring overweight fat white people of
above average intellect.

Who says I am wrong?

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new first couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)

This sounds similar to French in the sense that a statement can be turned into a question be applying upward inflection at the end without changing any wording.

...and let's not forget that double-negatives are quite common in Spanish.

>you keep bringing up his name here? Why is Oyen so important to you?

>Totally avoided the issue, as always

Yep, you sure did, Drew. Who was it that a couple of months ago was bragging
about having "flushed out" Eric in this newsgroup, and said that he'd flush out
THE OYE BOY in another six months? Why is that such an important
accomplishment for you? Are you proud of the fact that you dregded up the past
instead of letting sleeping dogs lie? Haven't you got anything better to do
with your life than sit behind a PC and agitate people? Apparently not . . .
when Eric stopped responding to your posts, you went after "Captain Bathtub."
I recall that a little over a year ago, you posted messages in the
radio-related newsgroups renouncing all the flaming and hate-mongering which
takes place in the NG's. Now here you are again, posting your worthless crap
and denying the facts. The more things change, the more they stay the same.
Put up or shut up, Drew--you can't have it both ways.
In closing, I suggest you start power walking again. I understand it's a
great way to relieve one's frustrations--and judging by your posts in this and
other newsgroups, I'd say you have a LOT of frustration to get rid of. Now go
play with your buddy Casey Thrower--I'm through arguing with your sick mind.

The book is "Ride the Airwaves with Alfa & Zulu" by John Abbott, K6YB. ISBN is 0-9651088-0-5; price $14.95 for the 3rd printing (1996) which may not be the latest one. It does a good job of explaining the material.

Good Luck!

YOU of all people should talk about the downfall of ham radio Bob!

You were the person who chose to defend the actions of KV4FZ
and his cohorts, who deliberatly jammed the Maritime Mobile
and Intercontenental Net(s) for over 15 Years.

Have you forgotten this bit of history so conveniently at this time Bob?

You made you bed, now sleep in it. (but please, do not come on here and
start calling the pot and kettle black by bemoaning the downfall of ham radio)

No accusation made, "FRNKBURNZ." Better go back to 4th grade reading class and brush up on your comprehension skills. I ASKED a question. I ASKED "WERE you and he gay lovers?" Well...were you? Second point: it is not possible to "libel" someone who remains anonymous and identifies himself only by an ailias. Duh! You lose again.

Bob Sherin wrote in message
<7322-365FB836-11@newsd-231.iap.bryant.webtv.net>...
As a licensed youngster in 1952, I recall the rush of listening to AMers on 75 Metes. They were respectful and well spoken, for the most part. But from there, standards degraded.

I've been off the air since 1993. Yet reading this NG tonight, I can see the downslide continue.

Though I've considered setting up, putting out my big 20 meter signal again, ham radio offers no draw to leap back into this lion's den of vitriol and vituperation.

It was more than that, ther was a re-design to reduce the synthesizer
noise and in addition to the keyer, the 500Hz BW cw filter at 9MHz,
which was optional with the IC-751, was made standard in the IC-751A.

I have large transformer & Powerstat I'd like to sell. I'm not sure what

the application is, but it looks like it is a "home-brew" variable power

supply. It is all attached to a panel with 3 volt meters, a 110v outlet,
a
positive and negative connectors and a large dial. Can anyone one tell
me
what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x
6"D.

label info: As Isolation - 1 kW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

-ERIC

Greetings,

I would like to inform all Scanner Listeners, Amateur
Radio Operators, & Communication Hobbiests of three
mailing lists that caters to these topics!

* scanner
* antenna
* ham

Our Mailing lists have been active for over 1 1/2 years.
Participants share a common interest in communications.

If you are interested in joining any of our three mailing
lists, simply visit the following website for further
details.

http://www.honk.org/ham/lists/

I would also like to stress that these lists are closed,
therefore only people on the lists can post to the lists.
All email address information is classified, and is not
available to the general public.

I use an authorization code system, so only you can
be added to the list of your choice. This filters out
unwarrented subscriptions, for your convenience.

You will be validated right away, and added to the mailing
list of your choice.

If you have any questions, please feel free to contact me.

Have Fun, and I hope to hear from you!

73's

James Poulin

From Tad Cook, K7VVV
Seattle, WA November 28, 1998
To all radio amateurs

SB PROP ARL ARLP048
ARLP048 Propagation de K7VVV

Sunspot numbers were down slightly this week, but solar flux was up. The geomagnetic field was fairly quiet. The average solar flux for the previous 90 days rose from 128 to 131, and the solar flux rose above this range for the past few days of the reporting week. The trend is up, as shown by the rather dramatic jump in solar flux from 129.9 to 140.2 and 149.5, then to 156.4 on Thursday.

For Friday through Sunday, conditions look good for the CQ Worldwide DX CW Contest, with a predicted flux of 160, 165 and 165, and planetary A index of 15, 9 and 9.

Following the contest, flux values are expected to stay around 145 to 155 from December 2 through 7, then stay in the low 130 range from December 10 through 18 and rise above 140 again around December 22.

Sunspot Numbers for November 19 through 25 were 57, 58, 55, 56, 56, 74 and 102 with a mean of 65.4. 10.7 cm flux was 117.9, 121.5, 121.2, 126.1, 129.9, 140.2 and 149.5, with a mean of 129.5, and estimated planetary A indices were 7, 12, 7, 7, 10, 12 and 9, with a mean of 9.1.

But it seems like Aloha Net did have an influence on Amateur Packet.
Years ago, someone fairly high up in the Department of Communications here
in Canada, I forget his position but his name was John deMercado, had had
some sort of experience with Aloha Net. He decided it was soemthing good
for amateur radio, and started seeding the information out and eventually
got the rules changed for Packet, including a code-free Digital License
that was intended to get computer people involved in the radio side of
things. My memory is hazy about all the details, but I still remember
being a bit puzzled that it was coming from the top down, rather than
hams exploring the new technology and then getting any needed rules
changed to allow it. That was back in the spring of 1978 or so. I recall
the Montreal Amateur Radio Club moving it's meeting to a bigger location
for the even, and deMercado spoke, and there was a demonstration of
Packet.

Hi
I'm a newly licensed amateur, looking into buying a handheld.
I was wondering since their are so many units out their if anyone could
offer help in what to look for in a Dual band 2M/440mhz Unit.

Also what accessories should I look into
purchasing for better operation, antennas,mikes,Batteries,etc..

I want to put together a worth wile package ,for my christmas list, that
will enable me to start transmitting under the best circumstances come
christmas morning, not having to wait till next week to buy the right
acessorie to get the job done.

Thanks
-- TOM --

Pleased at the attention my post received, I want to weigh in about the federal prosecution of Herb Schoenbohm, KV4FZ.

Not only did I support Herb on the air, I flew down to St. Croix for the trial and helped with the defense. Upon returning to Miami, I researched a voluminous printout the prosecution had used to secure convictions on two counts.

Guess what? It was a fabricated piece of evidence foisted on the trial at the last moment. Jury verdicts on two counts were reversed post-trial after I discovered two people listed here in Miami, supposed receipients of illegal calls, who didn't know Herb and hadn't talked to him.

Though I am no fan of Herb's, the "Kenn Starr-type prosecution," dirty and exaggerated, incensed me. Successfully supporting Schoenbohm's civil rights in this case doesn't equate to ratifying his behaviors otherwise.

>
>CBrambo,
>the same could be asked of you.

Again...and for the last time...I haven't brought up Oyen's name in several months. "FRNKBURNZ" has repeatedly made mention of Oyen within the last few days. Again, I am simply asking for an explanation of why Oyen is so important to him.

>As for you assertions that Eric Oyen is gay? Well, there's no
>accounting for assumptions nd bad judgement on your part, huh?

I never made any such "assertions." Apparently, you also need remedial help with your rfeading comprehension.

>In fact, doing a check of deja news (as well as my own vast news
>server here at roudhawk.net), it seems that you were the one
>responsible for digging up Mr. Oyen's name and making the trot around
>the news group with it.

Not this time. Sorry to disappoint.

>Sadly, though, this is because you have no life to speak of.. Oh well,
>not my problem...
>
>BTW, if any of you want to contact Eric, he can be reached through
>juno at n7zzt@juno.com (that's his last known address). I am not sure

There are over 100 kilonewsgroups in my news file. There is no way,
unless you have participated in *all* of them, that you can claim
that the rec.radio.amateur subgroups are the only ones which require
identification.

The fact that we desire users to identify themselves is a holdover
from identifying ourselves every 10 minutes while on the air. The ARS
is supposed to be "self-policing" (FCC's wording); close to 20% of
exam questions pertain to regulations. Being law-abiding on the air
yet hiding one's identity on Usenet seems contradictory to me.

Folks who toss rocks then run and hide in anonymity have absolutely
no credibility; they're cowards.

Just gotten word from K5BLB that there will be a "Thanksgiving party" tonite before, during and after the Liberty Net tonite. Sid will kick things off with a special "Anchors Awiegh" K5ZU will have a Holiday remedy for those "Holiday Blues" As a gesture of Good Will, The Staff of the Liberty Net have lifted WA9KJI's "quiet hours" from now until Jan 3rd 1999.

During the Holiday season listen for W2YEE to have a ever-expanding playlist of Holiday Music. Tonite he will play for us "Country Christmas"

A Holiday event QSL card will be made with all the Liberty Net members exchanging gifts at the home of W9ART

A Jammer QSL card will have the Jammers posed a Santa's elves...

Enjoy...

The DX302MAN

>no credibility; they're cowards.

You're ignorant,!! I hope someone gets your address from say www.qrz.com and signs your name to about 100 magazine/book/record/CD subscriptions. That's just one messy scenario that would keep your naive/ignorant ass busy untangling for a good six months or so.

You seem like some hams I have run across, someone that absolutely needs to try and exercise some authority because you _lack_ that in real life. As far as your opinions here , once again FOAD.

>As a licensed youngster in 1952, I recall the rush of listening to AMers
>on 75 Metes. They were respectful and well spoken, for the most part.
>But from there, standards degraded.

I heard the same thing from those who assailed the imminent demise of Ham Radio due to:

1. The widespread availability of WW II surplus equipment! (1946-1955?)

2. The arrival of "Mickey-Mousers" (Homebrew SSB equipment operators) (1956-1961?)

3. Too much "off-the-shelf gear vs. kits" (1962-1969?)

4. Too much "Asian Boxes vs. American Gear) (1970-?).

Bottomline.... while many enjoyed the era of cat's whiskers, super-regens and transmitter finals (6L6, 1625, 807, 6146, "sweep tubes finals"), the hobby still exists in the digital age and will continue to evolve!

Let us not confuse the declining civility of humanity in general (Hams included) with that of a hobby we have been privileged to enjoy!

Please,
From your description, it sounds like a homemade 0-135 volt / 10 ampere variable isolated ac supply, with possibly a dc section also. More information needed: are there diodes and capacitors inside (dc section), what are the meters marked, and what are the current ratings on the transformer and the powerstat?
It's use was on a test or repair bench to start equipment gently, to isolate/float the tested equipment away from the ac line neutral wire, and to test equipment above the rated 120 volts for UL/reliability checks.
It's current value for new items can be found in Allied's catalog; just guessing at $300. total for the two big pieces. The transformer and powerstat are rugged and normally don't fail, but other parts may have gone bad.
Shipping weight is about 50 lbs, no? What is your shipping address?

Regards, DLR c/o Topper

Bill's operative word is "cool". No street cop in his right mind, not even one of the Rambo elements in blue, is gonna tear down the door and rip up radios and haul the "perp" off over what I would asssume is a summary offense akin to a non-violent disorderly conduct complaint. UNLESS the "perp" loses his cool and ticks off the cop via any number of stupid approaches to the problem. A civilized discussion ought to completely defuse the matter on the doorstep.

The cop might think that he has a case and might issue a ticket anyway. The way I've been intrpreting the comments in this thread that is gonna happen someday somewhere. At that point there will be a confrontation between lawyers and cops and prosecutors and judges and the thing will become a precedent and that's exactly what is needed to get this nonsense resolved.

I think you may be right YI have large transformer & Powerstat I'd like to sell. I'm not sure what
the application is, but it looks like it is a "home-brew" variable power supply. It is all attached to a panel with 3 volt meters, a 110v outlet, a positive and negative connectors and a large dial. Can anyone one tell me what it might actually be and what it may be worth ?

Transformer - TRIAD N-62AC, weighs about 20lbs, 6 1/2"H x 5 1/2"W x 6"D.

label info: As Isolation - 1KW, As Autoformer - 2 kW

Powerstat range 0-135v, coil(?) on rear about 4 1/2" x 4 1/2"

Will accept highest offer for this equipment + shipping cost.

Thank YOU!

-ERIC

I think you might be right Topper!
The DC section has no caps or diodes, just 2 wires + / =. The meters are marked, 0-30 dc, 0-150 ac, and 0-2 (4a handwritten on face). Current ratings for both units are 115 vac each. The total weight of all combined I'd guess to be around 30-35lbs. I'm located in Troy, Ohio 45373 for shipping purposes.

Thank You!

-ERIC

That will last about a year or so until the present incarnations
of Dick Bash steal the questions and answers one at a time,
just like it was done 20 years ago. You can't unring a bell.

A better solution is to have _sample_ q&a published, and for
the actual exam use a randomization program to change the
parameters and/or the situations that make up the body of the
question(s).

4082. Interference Problem HF

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-28 00:00:00 UTC
From: KD5FJE@webtv.net
Message-ID: <3244-3660D1EF-99@newsd-134.iap.bryant.webtv.net>
Source record: 156949

Any A plus certified teachers of all things electric..here's your chance to help instead of blast people. .....
GIVEN: 1. HF 50 watt unit (TenTec Scout-chassis grounded outside to copper ground stake) using a 25 amp (SEC brand-cheap) power supply. 2. Rat Schack RG8u Coax, 50 feet direct from radio to center fed 40 meter dipole on roof (no balun). 3. SWR 1.2, / power out shows full. 4. Transmit on 40 meters.
PROBLEM: 1. Genie garage door opener (one side only) goes off everytime I hit the CW key...turned off breaker to garage doors to stop 2. baby monitor buzzes with every stroke of CW key. 3 Davis weather monitor II (not the cordless kind) display unit (which is fed w/ telephone conductor wire from weather instruments) goes to all dashes in the display everytime I hit the CW key. The display unit is plastic and I'm sure contains some type of computer chip(s)...problem occurs even when unit is unplugged and on batteries. It is not a radio controlled unit. 4. Television is not affected.
SOLVE; Do I have spurious emissions maybe? What could the problem most likely be and how might it best be solved...aside from quitting the hobby as some might suggest.....I know all of the above electrical devices that are being interfered with can't all run off the same frequency...Since the weather unit probably has a computer chip in it, I can't use my radio until the problem is solved, fearing that stray RF like EMP is cumulative and may destroy the unit. All help is appreciated.....73..Doug

How does one who is not a member of the legal or political communities
support that effort? The way to most effectively kill something like this is
to kill it before it even gets off the ground.

> the "locals" will have authority only in

Seems like the ham then would need to carry his ham ticket around and be able
to make it as available to the authorities as are driver's licenses and
registration cards. Plus a copy of whatever ordinance might apply with the
exclusions highlighted. This thing has the potential for driving street cops
nuts. How the heck is a street cop ever gonna tell if a CBer is running 4w or
400w??

Ugly and the last resort. I suffered huge doses of abuse and harrasment including severed tower guy wires but never took any legal action because I didn't want to give ham radio an any worse rap than it already had. Stupid.

MultiMode 1.2.1 has been released. It runs on any PPC MacOS system, and may run on some fast 68040 Macs. A windows version is *not* available.

MultiMode is shareware. The MultiMode web site URL is http://www.blackcatsystems.com/software/multimode.html

MultiMode decodes the following signals:

Morse Code (CW)
RTTY (Baudot)
ASCII
SITOR-A
SITOR-B / FEC / NAVTEX
WEATHER / SATELLITE FAX
ACARS
WWVB Time Decode
DTMF
Audio Spectrum Display to aid in properly tuning in stations

Senator Russell Feingold (D-Wisconsin), the author of this
stuff, was reelected this past month so it is expected that he
will again introduce it into the Senate. If past performance
is a guide, it will be referred to the Senate Commerce
Committee and probably emerge as an amendment ("rider") on
another "must-have" telecomm bill, such as the McCain
Anti-slamming Bill last session.

Gotta' keep the ear to the ground. I'm pretty plugged in to
Rep. Anna Eshoo, my local Congressrep who is on the House
Telecomm Subcommittee, so that's a help. I've sensitized Steve
Mansfield, the ARRL's congressional liaison, to this problem as
well.

>Seems like the ham then would need to carry his ham ticket around and be able

I also have noticed this cooling problem as my summer situation is
similar to yours. My "cool blue" is way to purple for my taste. I
think your fan solution is a good idea. Does it cause any additional
rx noise?

I was soliciting comments early this week on the Icom 746. Got one whole reply! So will ask mosre questions:

Also in my quest for a rig for myself I actually read the specs on the Yaesu FT-847. One more band than the IC-746 (though no neat big LCD front panel) and similar features. More filter choices too.

Yaesu is throwing in a free tuner or ATAS-100 antenna with any sets purchased before the end of hte year. Good incentive, as the rig is also $100 less that the HF/6/2 IC-746.

Any comments from folks that have the unit? Is it as good as the ads say it is? Don't have a ham store closer than Atlanta - a 4 hour drive - so it is difficult to set down and compare as I shop for a new radio for my Christmas gift.

Thanks for any replies! Please send copy of your reply via email so I may actually get it! My mail server can be odd at times.

Gee if you are member of the ARRL then you could go to the members
websitye and see theARRL talk a bit about RS new dualbander HT and
small HT (or was that micro the word they used)

The ARRL, and my local store manager both seem to think that
closing out the 202 is just part of the process that RS will be
involved in while bringing out a couple of new radios

I'm with you 100% Bob, I have been a ham for only 6 years, and I am 24 years old. I upgraded to Advanced class just two months ago and have thought about upgrading to Extra, but the more I listen to the bands and read the crap that goes on between some of the morons in this and other newsgroups, I figure, why waste my time. I guess we can turn the ham bands back over to the broadcasters in a few more years, because obviously we aren't able to control ourselves on them. Listened to 80 meters lately? I think it might be time for me to find a new hobby, maybe model trains or golf.

Would not put money in the bank based on comments by a RS salesperson.

I posted to another NG a suggestion concerning a RS three-terminal voltage regulator. Guy read my suggestion, went to THREE RS stores. Every one of them told him no such thing existed. I sent him the part number, he went back to ALL THREE stores and found a generous supply.

Michael,

You could do what I do: Simply concentrate on the DX windows in each band - particularly 75m. Foreign amateurs appear to be overwhelmingly more civilized than many US "hams" -- They don't seem to engage in petty bickering, school-yard bullying or infantile name-calling. Maybe they just grew up. With your Advanced ticket, you can get down to the 3,790 - 3,800 DX range of 75m. It's really a different world down there. It's amazing how much difference 100 kHz can make.... There are also several frequencies on 20m to avoid. Just watch this netgroup to see which ones. I recently made the mistake of trying to demonstrate ham radio on 14,313 kHz over the holiday, and was maliciously QRM'd during our "demo" contact. Made a great impression on the kids....

Be smart -- Stick with the DX and avoid the idiotic games taking place in the "arrested development" band segments.

Not anymore. All you have to have is the fact that it's listed on the FCC's web page. You don't even have to wait for the "Hardcopy" to be delivered before operating. Yes in the old days but not today.

FS:

AOR Scanner 1000 XLT
Case
Official reprinted manual (excellent quality)
hard to find CPU and Memory clearing reset instructions
Jumper included for cpu reset/memory clearing

Radio has always been kept in case, almost mint condition, case is
slightly worn, no scratches on face, original rubber duck bnc antenna.
Handles .5 - 1300 mhz receive. (Celluar is NOT blocked!)
20 channel per second scan.
Original DC charger.

Not included:
No rechargable batteries, but can run off included power supply, takes
4 AA batteries.

Take all for $300.00 US Money Order

This radio is most "i think" sought out for it's celluar recieve by
what I have been told.

Send E-mail via kf4tuz@qsl.net for more info.

I own an MFJ 1278B and a Yaesu Ft990. I am trying to make the cw keying installation, however the 1278 manual indicates I should use a two conductor shielded cable from the keying output jack of 1278. My FT990 manual states emphtically that I cannot use a 2 contact plug in the rig's key jack. Therefor I am at a loss as to how to interface the rig to the 1278. I was hopeful of taking advantage of the cw memory keyer feature. Any suggestions would be greatly appreciated. 73's de Mike W2OP email xfd@msn.com

well that's what happens when regulations aren't being enforced; to
own and operate a ham station (licenced that is) means that you know
and have basically agreeded to the rules and regulations that goes
with the privilage..... Just like driving a car.

when was the last time you heard rules and regulations on operating a
CB??

Ahhhhhh the joy's of being human..... the right to find
something to bitch about even when life is good. when it comes down to
it if you want HF then learn your code. end of story

the more people goof off on the ham bands the more enclined the gov.
is to sell it off since more regulation is required at a higher
expense.

>> Why are we soo concerned about this new law?
>> If it will help clean up cb, isn't a good thing?
>> Larry

The law, as presented, is an open invitation to abuse. It applies not only to CB but to any home based, or non commercial mobile radio installation. Given the long term animosity between radio operators and non radio operators, any law that offers intervention by non technical types invites harrassment of the radio operator. In matters of interference, there is a presumption of guilt that is, in many instances, not deserved. This will not clean up CB as much as it will be another impediment to legitimate operators in an area where their installations are not appreciated by teh neighbors. A fight that both hams and CBers have been fighting for almost 40 years by now.

>NO!!!!!!!And who ever said cb needed cleaning in the first place? MK

Yeah...give that up. If your claim is that the overpowered, audio processed, echo-plexed, broadcasters on CB playing music and peppering their commentary with drop ins and sound effects is no more than an underappreciated art form, then you need to re-read your regs. If your claim that the hot footed coast to coast operators on CB are just another incarnation of 'everybody does it,' then you need to reevaluate your sense of right and wrong.

CB needs some serious adjustment...And this has been true since the late 60s.

>>Tune down to 80m - you'll hear that the filter is working just fine.

>But how is it a "filter", Jeffy? The same licensing requirements are in place
>for 80m as are for 75m.

Here's how it works: The code test is *not* the filter - folks are passing
the 13wpm test who can't even copy 8wpm - VEs have testified to that fact.
The riff-raff can pass the exams as easily as anyone else.

Think of the code as a high-pass filter - the filtering begins working as
soon as you leave the phone frequencies and tune down to where code is
being *used*. No riff-raff.

4114. Re: Interference Problem HF

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-29 00:00:00 UTC
From: Jones <Jones@nomail.com>
Message-ID: <3661a38f.0@208.206.112.5>
Source record: 156815

GIVEN: 1. HF 50 watt unit (TenTec Scout-chassis grounded outside to copper ground stake) using a 25 amp (SEC brand-cheap) power supply. 2. Rat Schack RG8u Coax, 50 feet direct from radio to center fed 40 meter dipole on roof (no balun). 3. SWR 1.2, / power out shows full. 4. Transmit on 40 meters.
PROBLEM: 1. <list of RFI problems> ..73..Doug

My guess is that your antenna is coupling into your house wiring, especially if your dipole is low. Also with no balun your coax likely has some RF on it and it may run next to some house wiring. Try to get your dipole and coax as far separated from your house wiring, most of which is likely in the attic, as you can. This means go higher and if you have property maybe moving the antenna in the back away from the house. You also might try a vertical which will be a right angles to the attic wiring (less coupling), again as high and as far away as you can. Give a balun a try on the dipole to cut down on feedline radiation. If this doesn't help you may have to try to filter the leads coming into the appliances most affected. There's nothing likely wrong with your rig. Todays appliances are poorly designed and this is a common problem.

Phil Kane (philkane[at]commlawcenter[dot]com) wrote:
: The situation as I know it from a source in that area was that
: a CBer was getting into a neighbor's telephone (power level
: unknown), and the CB operator offered to buy her a bullet-proof
: phone. This was rejected and the wheels started turning. I
: have yet to see the actual ordinance but it allegedly covered
: only overpower and out-of-band CB, the same stuff that the
: Feingold Amendment would have covered.

I had a problem a couple of years ago with my stereo picking up
a CB. The stereo wasn't even on.

I went outside and walked around for a few minutes and located
the transmitter. Someone was sitting in a pickup across the
street broadcasting with far more power than what I suspect is
legal (I haven't paid any attention to CB laws since they became
known as CBs. From the mid 60s through the mid 70s we used them
on the farm in every pickup, truck, and combine, and on some of
the tractors.) Once I found him, I politely told him what was
happening and asked him if he could go somewhere else and he
obliged. End of problem.

My WWW page may not be one of the best but a lot of hams still visit it. I wonder how this compares with your ham page? Oh you do not have one? Why you could care less about your family? Or you enjoy contests. speaking of contests this weeks Nazi SS on CW spread throught the CW segment whereas CW contesters screwed with PACTOR, AMTOR and RTTY. Why because contesters are like pigs. Nothing stands in the way of the ultimate ham loser, the contester.

4122. The ARRL exposed

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-29 00:00:00 UTC
From: burt1@my-dejanews.com
Message-ID: <73rgma$29b$1@nnrp1.dejanews.com>
Source record: 156823
Cross-posted to: rec.radio.amateur.misc,rec.radio.,amateur.policy

This is a repost for those that missed the earlier ones

The following are comments by a former high level employee of the ARRL. The organization seems to be "Of by and for the administrator." Additionally there are some
serious concerns that the ARRL is working AGAINST the interests of amateur radio.
This is the opinion of a well respected person. What does the ARRL say? Based on what I have experienced with the ARRL the following is believable. What do you say?

Here are the comments:

As I've already mentioned, life at ARRL HQ was no picnic, although I really did love the work. Your friend and mine, Dave Sumner, turned out to be a very calculating, extremely intelligent and ultimately devastating-to-ham-radio person. And, as understanding of the organization as YOU are, I think you might be taken aback by the things that have happened there in recent years.If you knew about them.I'll throw a couple of hints your way, just to get your blood boiling a bit:1. Do a search in Part 97 regulations for "National Radio Quiet Zone". Do some digging. Don't bother looking in Part 97 for this, but try to figure out what organization benefited from silencing all radio amateurs for 100 miles in all directions of one of the many domestic "offices" of this organization.In the rules, you'll likely find mention of a DIFFERENT organization (The National Radio Astronomy Observatory) which purported to be the ones benefitting. Partially true; they did benefit. But the other, far more sinister organization, is also mentioned, by not by name, in that radio amateurs are required to get approval from BOTH organizations, before attempting to do their FCC-approved transmissions from within the quiet zone.Try to discover why ARRL never lifted an effective finger, nor uttered a sound, to stop the Quiet Zone, since they (ARRL) otherwise purport to be on the side of radio amateurs. Hint: ARRL Ex Director Mendelsohn, ex-President W4RA, and several other present and past paid employees were PURPORTED to have ties to NSA . So was I, in the late 60s, but that's another matter.By the way, the Quiet Zone was actually implemented in 1958. But radio amateurs were not affected until the no-named agency went to the NRA in the early 70s and said "things are too noisy out here in extremely rural West Virginia; we need to shut down all the hams; will you be our cover and get the FCC to get 'em the hell off the air? Please? And don't worry about the hams;they only have one organization looking out for them, and we've got that little problem covered..."Almost 30 years later (last month), I happened upon mention of Microsoft's new"TerraServer" which allows you and I to see, from Russian satellite

perspective, levels of detail such that you can see your house nicely and be very confident that it IS your house. By going to their web site, I pannedover that mountainous, rural, people-less terrain in West Virginia, and lo and behold, there were the two organizations. If you're REALLY curious, go the library and find a book entitled "The Puzzle Palace" by Bamford. In the chapter entitled "Platforms", you'd learn who the organization is and how it is that they can conduct completely illegal electronic spying on your phone calls, made much easier, now that the hams aren't being so pesky. 2. Now that Senator Goldwater has become a silent key, you might want to examine as much documentation as you can about his dealings with the Federal Communications Commission and the ARRL. Ask yourself WHY his bill (Public Law97-259) was deemed to be such a wonderful thing, when in fact it resulted in the following very BAD things for the Amateur Radio Service:A. Zero examining efforts by the FCC / greatly increased income (for the ARRL) by way of the VEC program (yes, I thought that might strike a resonant chord with you...) B. Zero enforcement efforts by the FCC / greatly increased duties by the ARRL. In fact, PL97-259 explicity allowed for the ARRL to form the Amateur Auxiliary to the FCC's Field Operations Bureau, but K1ZZ, W4RA (there he is again, notice any trends?) and Director TurnBull, W3ABC, all made certain that Goldwater's law NEVER allowed for any means of actual enforcement to occur.Of, by and for the radio amateur? Yah. Right.All these years later, it's interesting to see the newsgroup ravings about KV4FZ, WB2OTK and K1MAN. Subsequent to the Goldwater law being enacted, I was tasked with documenting illegalities against those three folks, and I did so quite successfully. K1MAN sued me (and several others at HQ) but on the day that Baxter came to Newington, acting as his own counsel, I was shuffled off to an ARRL convention in either New Mexico or Arizona, I forget which. They did send me to Florida to meet with 'FZ and as for Whitten, I'd already run into him on the Cape and wanted no part of him in person at least, after that.In any event, all these years later, all three are still on the air, having a grand ole time. In any event, Burt, that's the scoop. Oh, one other thing that'll make you smirk, if not outright guffaw. My best friend, who was forced to take MY job, once I was fired, and I, frequently communicate by email. A couple of months ago, I happened upon one of your REALLY excellent W1AW transformations, and decided to forward it along to my buddy. As it turns out, they're under a gag order with regard to email communications (which, come to think of it was the main reason I was fired; I refused to abide by their asinine gag orders) -- and he never responded with so much as a "dih dar dit" about it. Kinda comical, actually.

My non ham daughter, Coral, was listening to 10 meters and I asked her her reaction and she said this, "When you look up boring in the dictionary it should have a picture of a ham radio."

That would result in magnitudes more errors in grading. How is a
VEC who doesn't know Ohm's law going to grade an essay exam?

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated October 30, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

DECEMBER 1998

Dec 19 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

JANUARY 1999

Jan 24 (Sun) - Villa Park, IL - Wheaton Community Radio * Amateurs Mid Winter Hamfest - '98 at the Odeum Exposition Center 1033 N. Villa Ave., Villa Park, IL. Info: Pat Byrne, * K9JAU, 414 North Park Blvd., Glen Ellyn, IL 60137. 630-545-9950. E-mail: k9jau@juno.com, http://www.w9ccu.org (Held inside and is usually crowded. - AJ9S)

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain

of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

Probably the same as AOL's response to all the would-be censors who whine about posts on here they do not like in a misguided attempt to get their authors removed from the service. Unless the posts are blatantly obscene, libelous, or profane, AOL could care less. Their concern rests with their paying customers who hand over $4.95-$21.95 every month and keep their stockholders happy in the process. They could care less about whiners on USENET who dislike their customers' opinions.

Try a quality 1:1 balun in place of the center insulator,I wouldn't
think of building a dipole without one.They are inexpensive $15-$30 and
why not stop a problem before it starts ? TVI gives our hobby a bad
reputation.ARRL literature should show how to build a
CLEAN,cheap,antenna not just a cheap antenna.At least the problem is
only effecting you.Hope this helps. AB7RS

Your no change assumption is correct, the sucker is fixed to cool blue.

I have written Icom and told them that not to put a color LCD in this radio was a big mistake. How much more would the radio have cost? $50 maybe? ICom has a great idea with this radio. They took a few short cuts and really crippled the radio. Also, in the summer my shack gets warm sometimes, about 80 deg F. The radio's fan only comes on during transmit and then cools down. If the radio is in a warm room and never goes into transmit, after an hour or two it will get very warm. So warm the LCD will lose contrast and becomes even harder to read. So, I went to Radio Shack and purchased a 1.5" 12v fan and mounted it behind the LCD board (fan runs continuously, very quiet) so the LCD runs cool. In contrast the 1000MP fan comes on when the radio gets warm, regardless if your transmitting or not.

I have also removed the 9 kHz (AM) 455 filter and replaced it with a 6 KHz filter for better SW receive.

The IC-756 is a good radio, just a few additions by Icom and it would have been a great radio.

I have also thought about replacing the 9 khz filter, but it is used in the FM-N mode as well. You might try this trick: Use the normal SSB filter (2.8 khz) instead and shift the 455 khz passband all the way to the right or left. this will allow you to tune the signal in the AM mode and only listen to one sideband. The equivalent band width on one sideband at 2.8 khz is 5.6 khz double sideband. The results are quite acceptable for both AM broadcast listening and ham AM on 3875.

I agree with your observations, and would add that whenever I hear operators carrying on like inmature juveniles fighting in a sandbox I select another frequency and thus not expend valuable personal time. A friend of mine, who is a current sitting member of the House Of Representatives, once communicated to me a true pearl of wisdom. He said "Whenever anyone receives information of any kind, it is then required for the recipient of the same to either act upon the same or completely ignore it." This person chooses to ignore the various children's sandboxes on certain ham radio frequencies and leave this problem to others. There are much more productive endeavors to apply my remaining time to, and I select to seek the roses instead of the thorns.

Typical audio rectification scenario -- the stereo should have
ignored the presence of the radio signal but didn't. A design
deficiency in the stereo.
>
>I went outside and walked around for a few minutes and located

>obliged. End of problem.

No, the "problem" just moved somewhere else, and in your
case the "problem" wasn't solved one bit, because the next
pickup truck could very well have a licensed radio amateur
running 1500 watts on 10 meters, a "legal" operation, and you
will have the same audio rectification problem.

BTW - FCC tests in the 1980s showed that as little as 4 watts,
the CB "legal" power, can and will cause audio rectification
and TV interference if the stereo or TV does not have adequate
rejection capabilities. Presence of interference is NOT an
indicator of unlawful operation.

Why? What purpose would be served? Other than making
the test harder for the VEs to grade and opening things up
to subjective interpretation and pissing contests about
how the VE interpreted the applicant's answer ... I know that
my handwriting would be hard for most to intrepret ... (Mom
always said I should have been a doctor, since my handwriting
looks like a prescription :-)

First, a large portion of the information tested (rules, regs, etc.)
can ONLY be memorized (call them "type A questions")
... they cannot be derived from some general knowledge like
solving problems involving Ohm's Law, resonant circuits, transistor
biasing, etc. (call these "type B" questions).

If there are enough "type A" questions, questions are selected
radndomly from the pool, and the answers are randomized
such that answers "a to d" in a multiple choice test are not
necessarily in the same order, the test is a valid measure of the
applicant's knowledge, according to most educational
testing standards (including the SAT, ACT, etc.) that I've seen.

If a multiple choice test is adequate to determine whether one
gets into college or not (or into a "good" school or a "2nd tier
school) then it certainly should be adequate to decide if one
can become a ham ... remember, the license is a permit to
participate and learn, not a graduation certificate.

As far as the "type B" questions, having a sufficiently large pool
of questions and computer-randomizing the variables and the
answers (and having reasonable distractors for the incorrect
answers) would eliminate those few idiot savants who can actually
memorize a pool of, say 1000 questions and require that people
actually *understand* the principles behind the material being tested
in order to be able to pass the test.

I that sort of scheme is not "good enough" for you, I must conclude
that your primary goal is to keep as many people as possible from
becoming hams, regardless of their qualifications.

If the municipal ordinances being discussed here actually go into effect how does a ham obtain and use that FCC data as a defense when he gets pinched for interference?The worst TVI/RFI generators in town were the local police cars on 39.700 and the aircraft overhead at low altitude on final into Philly. The neighbors couldn't tell the difference between any of 'em and me let alone any difference between me and the couple CBers in the neigborhood with their mistuned 100w amps. I was The Permanent Perp because I had the big tower, period. You cannot convince a neighbor that his nice new $2,500 sound system could possibly be defective and that the interference ain't your fault.

Great entertainment this afternoon on 14.313 (a/k/a The Daytime ZOO of Amateur Radio.) We have Pork Butt, still trying to defend himself against allegations of racism, bigotry, etc. But now, there's a new twist...Polly Parrot, accusing Pork Butt of being a racist, has HIMSELF been accused of much worse by a couple of other ZOO participants.

Who's the black ham that's arguing with Polly and telling him that he's a worse racist than Pork Butt? Strong signal, but no callsign. Hilarious!

Just another day on THE ZOO!

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

ASS-u-ming that the Feingold Amendment gets through the screen
of heavy flak that I and others intend to put up to keep it
from going through, the "locals" will have authority only in
regard to CB transmissions using unauthorized power and/or
channels. As proposed, the Amendment will have a specific
exemption for anyone licensed in any other service using
equipment in that service (a catch-all courtesey of the ARRL to
exclude ham operators) and an opportunity for "removal"
(transfer of jurisdiction) to the FCC of any arrest/citation
before any local court action can commence. No authority will
be granted to "locals" for any other enforcement action in any
radio service.

The above is not specific leagl advice but if it comes down to
real life remember what I do for a living....

>You cannot convince
>a neighbor that his nice new $2,500 sound system could possibly be
>defective and that the interference ain't your fault.

That's why both the FCC and the private sector legal folks like
myself adopt the "one shot" approach. We tell them that it's a
deficiciency in their own equipment, point them in the
direction of getting help for themselves, and take no further
action unless my client the ham gets harassed and then I get a
restraining order against the harasser.

Midland 13-882C. August, 1976. Power supply? A car battery in the garage (because it leaked and my parents certainly wouldn't let me bring it in the house!) Antenna? Didn't have money for that! Started out with various lengths of wire...then the TV antenna on the roof...then a cheap Kraco magnet-mount, stuck to a rain gutter...finally graduating to an Archer 1/4 wave ground plane on the roof. Damn radio had iron finals, I swear! :-)

Hi Bob,
Don't take what you read on the news-groups to be any indication of what hf is like. Most of the net-addicts sit here and cry while "real hams" get on the air. There are a few garbage operators on the air, just like there were in 1952, but the good guys outnumber them and the FCC is getting back into the enforcement business.

Hope to see you on the air.

Hi,

I have a NEC Versa M/75 notebook and am having trouble finding software/freeware/shareware that will acknowledge the soundcard, and being the inept one that i am, have also not had much luck by changing the irq's, etc. some software works, some doesn't. It is a built in card with windows drivers, which emulates soundblaster. I'm trying to run things like ACARS decoder, POCSAG decoder, SSTV and RTTY decoders..... am I wasting my time trying to make the "soundcard-type software" work?? Should I just order that HamComm serial port decoder and be done with it? (it do seem to have a lot more software avail.) also, anyone with input on the usefulness and operation of your hamcomm decoder, please feel free to input! Can it be used with a spectrum analyzer program?
thanks for the time and please email replies!
Randy

Amateur Radio Service Communications

Answers to Frequently Asked Questions

The following are answers to frequently asked questions about communications appropriate for the amateur service. See Part 97 of the Commission's Rules, 47 C.F.R. Part 97, ("rules") for the complete regulations.

COMMUNICATIONS

Q. Can I operate my station as soon as I see that information about my amateur operator/primary station license grant appears on the amateur service data base?

A. Yes. You have authority to operate when the information about your license grant appears on the data base.

Q. Does this mean that I don't have to wait until the license document arrives in the mail?

A. That is correct. You do not have to have the license document in your possession in order to operate.
This is from the FCC's web page on FAQ's found here
http://www.fcc.gov/wtb/amateur/amfaq.html

4165. What's wrong with my beam?

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-30 00:00:00 UTC
From: guyzee@ibm.net
Message-ID: <36630FD0.599AADE6@ibm.net>
Source record: 156714

To all beam gurus,
I installed a 7 element tri-bander on 11/21.
The SWR was perfect (very good) across 20, 15, and 10.
The next day the SWR on 20 shot up, but the SWR on
15 and 10 was still good.
It is a 7 element tribander.
The beam has:
1) a full size 20 mtr reflector
2) a full size 15 mtr reflector
3) four elements forming a log cell for the 20, 15, and 10
meter driven elements. (one acts as reflector on 10)
4) a trapped director with 15 and 10 meter traps.
My theory in this problem is that the 20 meter reflector
changed length OR a 15 meter trap is bad.

Looking at the following SWR vs. band chart, do you think
the trap is bad or the 20 meter reflector changed length,
since either can affect the 20 meter band SWR without changing
15 and 10.

Thanks to all who respond,
Guy Shields

4167. Hamcomm decoder or soundcard software? Nec Versa M/75

Newsgroup: rec.radio.amateur.misc
Date: 1998-11-30 00:00:00 UTC
From: The Crew <dc@citynet.net>
Message-ID: <73v5h1$73n$1@news.citynet.net>
Source record: 156716
Cross-posted to: comp.sys.laptops,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.commercial-lmr,rec.radio.swap

Hi,

I have a NEC Versa M/75 notebook and am having trouble finding software/freeware/shareware that will acknowledge the soundcard, and being the inept one that i am, have also not had much luck by changing the irq's, etc. some software works, some doesn't. It is a built in card with windows drivers, which emulates soundblaster. I'm trying to run things like ACARS decoder, POCSAG decoder, SSTV and RTTY decoders..... am I wasting my time trying to make the "soundcard-type software" work?? Should I just order that HamComm serial port decoder and be done with it? (it do seem to have a lot more software avail.) also, anyone with input on the usefulness and operation of your hamcomm decoder, please feel free to input! Can it be used with a spectrum analyzer program?
thanks for the time and please email replies!
Randy

Sorry to be anal on the 80mtr thing but when I hear someone say they have been listening on "80" lately and it's crap. I can only think they are some "no-coder".

A Ham that knew what he was talking about pointed out to me that 80 meters was the CW subband and 75 was Phone.

The CW subbands are the only escape from the morons that frequent the Phone bands and of course this news group.

The few ruin it for the many, so those few of you spoiling the fun for the rest of us, please make contact with the high voltage circuit of your amp. ASAP

More posts = more personal problems

hOWDY,

Lat and Long info:

An easy way to obtain latitude and longitude information is no farther away that your handy dandy Randy-McNally Road Atlas.

If you look closely along the sides and the top and bottom of the maps, you'll see this info.

VHFers:

I have a rather old (1993) R-M Road Atlas on which I've drawn in the Maidenhead grid squares. Use a color which will stand out on the map and your straightedge. Due to the fact that your straightedge draws straight lines <g> and the lat and long lines are actually curved, you could be a square off if you're looking up a location very close to the line you have drawn.

If you go to the trouble to draw grid squares on your map, you'll probably want to keep it in your shack for a long time.

I use mine almost every day.

If you are not happy with the current offering of software voice keyers, how about one that was designed from the ground up with MS operators, contesters, and just plain ragchewing in mind! If your PC has a Windows compatible sound card, its time you try this digital voice keyer. (Heck, one of the users even figured out how to do MS CW skeds with it.)

After some intense development effort, VoiceKeyExpress, the newest digital voice keyer, is now available.

Check out http://home.earthlink.net/~n7qjp for the details. You'll be glad you did!

Select the VoiceKeyExpress link from this page to view the user manual, FAQ page, and download page.

Hope you enjoy it, just in time for the next meteor shower!

Microsoft's AutoMap program will give you Lat/Long info for locations covered by it's database, as well as headings from point A to B. This is useful for getting your beam pointed right.

"FBB" Packet Radio BBS's have a grid-square server built-in. If you've got Lat/Long info, FBB will give you the grid square.

What is not said here, is, that there is a presumption of guilt against the ham. Innocent, or not, he must defend himself, and where authorities are involved, that frequently means lawyers to protect the rights of the accused. Meaning, innocent or not, the ham, once accused, incurs cost. Whether it fine, or legal counsel, its still cost. And so far, no one seems eager to address this issue as the harrassment through the legal system that it is.

Who can argue the need to address interference from illegally operated transmitters. That is surely a good thing. However, once an accusation is made, if pressed, the dark side of this ordinance surfaces. And it is a dark side that is keyed on accusation, not conviction.

As they should. Why should you desire to play with your radio cause an
eyesore in my neighborhood? The neighbors right and the hams desires are both
worthy of consideration, If a ham truly demonstrates a public service that
that ouught to weigh in his favor.

My neighborhood has begun to move

Since MOST interference complaints aren't related
to mobile operation, but rather from base stations,
then the license is probably readily available anyway.
Additionally, just make a photocopy of your license
and keep it in your wallet if you think it would be needed.

>Plus a copy of whatever ordinance might apply with the
>exclusions highlighted. This thing has the potential for driving street cops
>nuts. How the heck is a street cop ever gonna tell if a CBer is running 4w or

Exactly the point! Again, the problem is usually NOT
related to mobile operation anyway.

Cheers,
Bill K2UNK

>If the ham was there first, I feel he ought to prevail.

And that is the difference between theory and reality. The ham's in many areas are there before the covenants are enacted. And "grandfather" clauses not withstanding, the pressure is on to remove exteriour antennae. Harrassment through the courts is expensive and difficult to curtail. Even once a judgement in the favor of the ham is entered, appeals and subsequent suits may continue.

And now the ordinances that permit local authorities to be called into action in the matters of interference bring a new level of harrassment to the game, inall services, despite the fact that CB is the stated target.
Even if the claims have no merit, the accusation requires a defense, and that incurs cost. And time. And the ham, with his outdoor antenna, and assumption of full power, is presumed guilty, even when other sources of interference are clearly possible.

The easy solution for many hams, a decision made by several I know, is simply to vacate the hobby, or to go VHF mobile.

On the subject of eyesores....An exteriour antenna need not be a hideous appliance. But under the broad definitions even TV antennae are being restricted or banned, as well as ham, or satellite earth stations. These provisions are being supported by local cable franchises, who have, at least in the case of my neighborhood, offered substantial funding in legal research and campaigning for these covenants. Oddly, only CB ground planes are exempted. So the matters, at least here, are not cosmetic, but commercial. And discriminatory.

>Because what hams do and know is quite different today.

Yes, the hobby is evolving. And both the technology, and the practical knowledge are much different. But in my direct experience, the pressures to vacate the hobby are significant, depending on where, and around whom you live.

It would seem that ignorant non involvement is infinitely preferable these days to knowledgable practice.

Well, to each his own. The HTX-202 was and STILL is one of the best (in my opinion THE BEST!!) HT's out today. They are on sale now for $129.99. That is a great price. I paid $75 for a used one years ago, and they are one of the most durable HT's out. I have owned the following HT's for some comparison. Icom W32A, Yaesu FT-50RD, Icom Q7A, Icom IC-T2H, Icom IC-T8A, and currently own a Yaesu FT-530, and my HTX-202. And I would carry the 202 before I would carry the 530 in most cases... I only have kept the FT-530 for the dual band receive. So, as for me and I think that I speak for a lot of Amateur operators.... when I say that the HTX-202 is a GREAT piece of equip. I have dropped it and abused it as much as the others and it has never broke. Excellent quality.... from years back when Icom made them.... just now wears the Realistic/Rat Shack label..... Consider the HTX-202..... for more info or opinions on it I'll gladly answer E-Mail....

Anyone who can put this person in touch with some hams in San Antonio, Texas, please E-mail him direct:

<<< Jinx_104@hotmail.com >>>

How would I go about getting a permit to operate a ham-radio. I live in San Antonio, Tx. Any information you can give me would be greatly appreciated.

Thanks.

Fresh for me, the post is fascinating.

While I can't embrace all allegations, especially irregularity by the late, respected Senator Goldwater, I believe, knowing ARRL, there is some poison in the tree. Here' s why, a story nearly lost to history ..

After the Armenian earthquake in the late 80's, ARRL ballyhooed, by bulletin and QST, its prompt action in arranging the donation of several packet stations. So far, so good. A funny thing happened on the way to Armenia: the equipment vanished.

Catching on quickly, American hams tracked it to Moscow and the custody of the late Leonid Labutin, UA3CR. Appointed to manage post-earthquake, Armenian communications, Labutin was connected with the Soviet version of ARRL, the Radio Sports Federation, and was well known to ARRL.

American hams, frantic to assist disaster victims, telephoned ARRL at Newington headquarters with reliable information of the gear's whereabouts. What did ARRl do? Nothing, absolutely nothing yet they continued crowing about the majesty of their charity.

To Labutin, the crumbling Soviet Union was less charitable. The Earthquake Commission, headed by Mikail Gorbachev, promptly pulled UA3CR's ham license.

The story then shifts, several months later, to the huge communist newspaper, Pravda. In a personal appeal, which appeared to knowlegable observers as a coverup, Labutin went public to regain his license. In response, an accurate account of the episode, which had been pieced together by hams on both sides of the globe, was sent to Pravda. Not to be outdone by ARRL, Pravda stonewalled. The story never saw the light of day.

Eventually the highest levels of the Soviet government, sympathetic to Pravda's drum roll, reinstated Labutin's license.

Quick to promote charity yet unmoved to actually help, ARRL has stayed quiet all these years, loathe to shake revenues by exposing this case of international intrigue.

Source record: 156783

You know Peter, I too have found RS employees totally illiterate when it comes to electronics as well as radio. I (who know very little) know more about ham radio than either my Frys' Electronics or RS salesperson..
I have had hands on with the RS HTX-202 and find it very user UNfriendly, poorly made, and expensive compared to "brand" HT's. My opinion, but I don't know how anyone who has seen other models could possibly think this is a good or even mediocre HT, with its small keys and difficult programming. Perhaps sales have dropped off as a result. RS products are, in general,very expensive junk. I do have a DX-394 s/w receiver which has served me well. Their FRS radios are overpriced and score at the bottom in performance reviews. Their coax (RG8) is lousy and very overpriced...probably the most expensive per foot there is..just like their speaker cable, which can be bought anywhere in the same guage at half the cost. No, you won't find me defending RS...they "abandoned" the electronics hobbyist as well as the ham hobbyist years ago.
As far as ham radio beginning to die....I think it's more of a case of society and morals which are beginning to die, which, of course, affects everything else, including ham radio, television, crime, schools (where kids learn the 3 "r"'s...rape rap and robbery)...you name it. And yes, as people's values deteriorate, so too will pursuits like ham radio, soap box derby's, reading, cooking, et al. We have traded our family culture for PlayStation, Nintendo, SexViolence....were we really a better and more innocent society in the 50's? Absolutely. Is ham radio dieing? Probably...at least the Quality of it is dieing, and when we lose the quality, we lose the hobby. ..73...Doug

You say that KV4FZ has been jamming the Maritime Mobile Net for 15
years, right? Why hasn't got wind of this? You would think they
would be able to have some data on this aleged "jamming" activities.

You may want to know that checking into a net and expressing your
opinion about illegal activities does not constiute "jamming". Herb always
gives his call and never has been charged by anyone of use jamming
techniques such as noise makers, music, radio, etc. Jamming is jamming.
And you ought to know that free speech is free speech. OK?

Hello all,
I'll trade a 486 persaio 924 computer for a good working Kenwood HF rig (TS 430, 830, 530, 140, 680 or better HF rig) and mic. The Computer has network card, sound card, 16x Cd ROM, modem, 16 megs of RAM, 400 megabyte harddrive, keyboard and mouse. I will also through in a ICOM 27 2 meter rig with tone board and tone mic, and a KPC 2 TNC. If you have a TS 520 or TS 820 both with mic I will trade just the computer. I'm looking for another HF rig for 160 meters. If you are interested you can email me at oris@dirtball.com or give me a call 706 789 3505.
73 and thanks for reading,

Burt, why do you post this type of information to a Ham Radio related NG? Surely you must enjoy the flame-fest that you intentionally started by making this statement. In the language of the NG's as I've seen it, this is about as blantant a "troll" message as I've ever seen. Is that what you desire, to spend time going back and forth over a post that is designed to cause hate and discontent? I realize that you have a Constitional right to state your opinion, but why state it in a manner that does nothing constructive and causes nothing but more animosity?

I have 14 and 10 yo sons respectively. While they are not as interested in Ham Radio as I was when I was 14 or 10, they still enjoy using their shortwave radios to collect QSL's through plain old DX'ing. Sure, there are many more things for our children to do these days in the world of communications. But don't knock one hobby based on the opinion of your 10 yo daughter. I could ask my 10 year old what he considers boring and the list would encompass just about anything I used to do for fun when I was 10!!

Why don't you save your inflammatory statements for some other forum. Please, spare me the normal rhetoric of attacks on my person, my belief, or my method of answering your post. I make this post in an effort to give an even-handed view of someone with a different opinion than your own.

In listening to people discuss the code requirement over the years,
I have come to realize its not that people don't want to learn the code, its
that some can't. I myself find that although I can pass the test I just can't
become comfortable enough with it to truly master it. That is to the point
where I can increase my speed or hold conversations with it.

So I would like to see a system where if a person can't pass the
test but can demostrate a good faith effort to learn the code, we waive
the requirement. If they tried, it should be good enough.

WA0ZTI

: I am a member and I LIKE the fall ARRL proposal.
: But I would limit the code exams to just one 5 wpm exam.

I am interested in upgrading my GROL with the GMDSS Maintainers License. I have been unable to find study material with the elements relevant to these (element 9?). I thumbed through a study guide co-authored by Gordon West that was on the bookstore shelves here locally and although it talked a great deal about the GMDSS, there was no element 9 study material.

I would be interested in hearing from others who have upgraded from a GROL. Was it a matter of taking the element 9 or was it necessary to take or retake other elements. What is involved in getting the GMDSS Operators? Do you just need to take the element 7 or is telegraphy a requirement?

This is to inform you that I will be forwarding this statement to
Mr. Hollingsworth at the FCC. You are offering a tape to the jammers so
they can play it on the frequencies you mentioned. Your intent is to
create more bedlam and problems. I'm sure Mr. Hollingsworth will be
interested Drew.

4225. Morse Code alive with Nokia Cellphones

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-01 00:00:00 UTC
From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <366402A1.738C@acm.org>
Source record: 156618
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

A friend who I do some consulting for just received a Nokia 6162 dual mode Cellular/PCS phone to replace another phone he had lost. He gave it to me for a day to test out the configuration and features for him. One of its features is that it can receive email. Well I sent it an email message and when the message came in it started beeping. What surprised me was that it was Morse Code! It was being sent at about 13WPM (not Farnsworth). I immediately grabbed pen and paper and copied "CONNECTING PEOPLE". Going through the phones configuration menu I have found that the beep option which sends this message is defined as "Long & Loud". If you have one of these cellphones and set the "Message Alert Tone" in your profile to "Long & Loud" it will beep "CONNECTING PEOPLE". I could not find anyway to change the message. I showed this to my friend (who is not a ham) and he thought it was annoying. He had me change it to "Normal" beep which is dah-dah-dah dah-dah-dah dah-dah-dah (OOO). There is also a "Special" beep which is di-di-dit dah-dah di-di-dit (SMS). Obviously a ham must have had a hand in the design of this phone!

Not a chance. There is a major safety issue involved, and the
difference between 50W and 100W is significant.

A lot of people make the mistake of agreeing to covenants beforehand. It's
easy for a real estate agent to shove the agreement in front of a buyer and
get a signature with all of the other paperwork you have to sign when buying
a house. -- Tom - N8ECW

The local rock stations play this song about twenty times a day. Constant
air time can ruin a good song.

yes, it is. you aren't forcing anyone to look at it. it is your property and
it is your right to do with it as you see fit, regardless of the opinion of
another party.

Nope. I com made them THEN Maxxon bought the rights and the
design from Icom to produce them FOR Tandy/Realistic. That is what happened,
at least That was what the Tech told me when I had my 202 in for repairs.
Yes, it did break when I dropped it on the BNC connector by accident. But
the FT-50RD that I had NEVER took a good shock without messing up the display
I feel that this was a bad unti and sent it to Yaesu many times. I also had a
Standard C168A that was a very good and durable HT, but VERY VERY low audio,
and had a problem with the speaker coming loose when used at high volume. But
from my experience no one at Rat Shack knows a thing that is going on as far
as new equip. They never have been right.... so, I'll wait and see what they
do then go from there....

It's just one of his periodical changes to his email address.
m@s@ (I may have this one wrong)
codesucker
cutie boy

I think there have been some others.

When I saw the new name in the local newsgroup, I thought someone new had joined in the conversation, but it was just Masa. Feel lucky that he's been pestering the local newsgroup and leaving the amateur radio newsgroups relatively unbothered in recent months.

Obviously, he thinks he can attract the women by putting some "cute" name in his email address. Never mind that his obnoxious posts cancel out his personal ads, and never mind that he insulted one woman by thinking she was a man and assuming she was not a Canadian by her name.

Really? It only involves cutting one diode! It's as simple as removing the
cover, taking the screws out to loosen the display panel, snipping the
(rather large, easy to get at) diode, then putting all the screws back in.
Takes about 2 minutes.

Julian

Not forcing? Maybe. But if it's a huge mural of Monica Lewinsky doing what she is most famous for doing, and in graphic detail to boot, it's not exactly a channel that you can change, or an article you can chose not to read, or a radio that you can turn off. Something of this nature isn't that easily ignored. -- Tom - N8ECW

I know a while ago there were alot of questions regarding NYC repeater freq's.
So here they are:

Freq Offset Tone
223.76 - none
224.44 - none
224.66 - none
440.35 + 103.5
440.75 + 192.8
441.60 + none
441.75 + 141.3
442.45 + 179.9
443.275 + 110.9
444.05 + 114.8
444.55 + 114.8

That's it for now, more will follow tomorrow.

That right from the Zoo...

Every Saturday night, Before During and After the "Great Liberty Net" Listen for some holiday sounds...

K5ZU will tell us how to get rid of those "Holiday Blues"
W2YEE is now taking requests for holiday music on 3950.

There will be awards given out this year. One is a QSL card picturing K5BLB as "The Strongest Station in the Nation"

Everyone that sends a reception report will get a QSL card with all the Liberty Net members at the home of W9ART...

New years eve will feature a surprise.. stay tuned.

14.313 events follow as:

On Christmas Day, PorkButt will give us a "Christmas message" wonder what he will say.

KV4FZ will make an appearence, telling the world to await his return to 20 meters as he will announce that his case will reach the DC court. .

A QSL for 14.313 will picture the StumpJumpers at the home of PorkButt

NACEC CONDUCTS FIRST EVER "RADIO ROUND UP" TO SUPPORT
ITS HURRICANE MITCH RELIEF OPERATIONS
FOR HONDURAS, CENTRAL AMERICA

North American Center for Emergency Communications (NACEC) is conducting its first ever Radio Round Up to acquire the additional equipment needed for its "Mission Honduras". The Radio Round Up allows interested and concerned individuals, organizations and companies to help by sponsoring pieces of the communications equipment that make up the systems that we will be using to bring much needed 2-way radio communications into remote areas of Honduras. These communications systems will expedite recovery operations in this devastated country. After our Mission Honduras is completed, the equipment will be returned and used to support major disaster operations here within North America.

With many roads and bridges damaged or destroyed, and in many places no telephone or radio communications infrastructure in place, the field communications needed to coordinate activities between agencies and relief workers is now taking hours instead of minutes. The equipment raised via the Radio Round Up will be used to provide instantaneous communications between the relief agencies and their members, thereby speeding the movement of food, water and medical supplies to devastated families.

The departure of the NACEC team will continue to be delayed until the needed communications equipment can be acquired. Those wishing to help with the Radio Round Up can find more info. at our web site by following the link on our hurricane Mitch Page
http://www.nacec.org/hurricane-mitch/

Those wishing to contribute should make their gift payable to the "NACEC Operations Fund" and mail their gift to: NACEC Operations Fund, P.O. Box 23057, Minneapolis, MN 55423 USA.

Those with questions about the Radio Round Up or Mission Honduras should call 612-798-4269 or contact us by e-mail at nacec@nacec.org.

I have thanked everyone personally who responded to my email..and thx everyone else who posted here. Funny thing though, despite what ARRL may have in their books, their current issue of QST Magazine ((oct 98) on page 58 shows the construction of a dipole straight from the coax as I have (incorrectly) done...hmmmm ARRL needs to do a little better job of editing I think. (The DR>Is In) column....Of course I bought it off the newsstand...saving my moola for radio equip instead of political organizations, and for local repeater support and clubs which better serve the community, and from which I get a direct benefit.....ok you ARRL lovers, don't bother..I don' want to hear it.....anyway, thanks again to everybody..73...Doug

Hey folks,

I have started a website and ISP strictly for ham operators. The idea is to get hams to help keep up a website with information updated weekly and monthly. I would like to have all the cool stuff you find on the net in one website. News, mailing lists, callsign database, if its cool I want to put it on there.

I am also offering free e-mail addresses, web services for all ham operators. I am also offering local dial-up service for people in Oklahoma (numbers in Oklahoma City and Stillwater, OK)

Please go check out the site and get your free e-mail account
http://www.hamsnet.net

Thanks for your help

> on the band. Guess few people have tried ten lately.

No, but they should. The K9KE 10m/2m repeater system was coming in
at an S7 here in Northern California, and through it I was able to
work stations in HI, CA, WA, MO, NV, and IL (some locally out there
on the 2 meter side. Quite a busy afternoon! 29.660 (minus 100).

I didn't get a chance to try the SSB portion of the band.

Greg.

BTW, I noticed someone running FM simplex on 29.500. Please don't.
That's right where the RS-13 satellite beacon is (which is what I
was listening for when I noticed the band opening), and in the
Satellite Subband. It totally obliterated RS-13's signal.

4255. CW=Best mode ever

What a bunch of whining CBers. Nobody if forcing you to learn CW. There are lots of codeless Techs enjoying amateur radio.
If you want to shoot skip you can get on your CB and work the world.
If you want access to the HF ham bands get your lazy ass in gear and do what the rest of us have done and learn the code.

If you're too ignorant to be aware of the unique qualities that make CW the most usefull mode for long distance communication, just go away till you figure out what's going on.

P.S cbrambo: Hey Dope, nobody reads your posts except the ones that are as screwed up as you. GET A CLUE!

where's that cbramDOPE I wanna see him make an ASS of himself HA HA HA

4257. Kenwood TM-V7A programming cable problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-01 00:00:00 UTC
From: Steve Meserve <stevenme@microsoft.com>
Message-ID: <741qja$frj@news.dns.microsoft.com>
Source record: 156650
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Has anyone else had a problem using the programming cable for the V7A? For the most part, the cable works (I can read/write from/to the v7a's memory channels), the problem is after the read or write is complete the radio goes into transmit! The only way to unkey is to power off the radio and disconnect the cable. I've tried 2 different cables, 2 different computers, and 2 different v7a's, but still see exactly the same problem. I'm using a Radio Shack db9 - db25 adapter cable, which according to Kenwood, is ok. Thoughts anyone???

No but I was almost tossed in jail as I refused to comply with a court order that stopped me from visiting my children. I told the judge to toss me in jail and how will the kids get money. The judge (a well known feminist) relented. You see going to jail to see your children takes guts, something my children appreciated and guts is something you know nothing about.

> Did you strike your first wife ?? Is that what the alleged arrest was
> for ??

I never struck any woman, she struck me. I never hit my daughter who is now 17 and a high honor roll student.

And fortunately, federal law now prohibits the banning of TV antennas or small satellite dishes. The primary reason for passage of this law was, as you have stated, the fact that cable TV companies were indirectly responsible for many of the restrictive covenants.

The answer is yes! The Hamcomm interface will operate many modes, including a few you did not mention - Hellschreiber (Feld-Hell), HFFAX, SSTV.

It is really easy to build a Hamcomm interface. I suggest you check http://www.accessone.com/~tmayhan/ for details.

For info on Hellschreiber, which is gaining a renewed interest the world over, check http://members.xoom.com/ZL1BPU/Contents.html

The Hamcomm softwaare includes a simple spectruim display.

73,

fred

"Psycho Circus" by KISS. This is the title track from the long-awaited KISS CD (first recording by all 4 original members in nearly 20 years.)

The chorus goes as follows: "You're in the psy...you're in the psycho circus...and I say welcome to the show!" Hilarious, and PERFECT for introducing jammers to the stage on THE ZOO of amateur radio!

Need audio clips? Just e-mail me and specify whether you prefer .wav, MPEG-2, or RealAudio format.

"You're in the PSYCHO CIRCUS"...the ZOO of Amateur Radio..."and I say WELCOME TO THE SHOW!"

Ten has been WIDE open almost every day for a couple months,if you
don't believe me look at one of the reflectors.I operate HF mobile about
5 hours a day and used to switch antennas about once a week but I have
kept my 10/12 meter on for a month because 10 has been so good.In the
morning I start hearing south-east US and the carribean then the rest of
the states and europe then the band fades a little but right as the sun
sets I here china,japan.australia and new zealand.AB7RS

CODE is fun.
The reason I want to keep the code requirement is to weed out the
hordes of
the "Mildly Interested" who have no real stake in the past, present nor
future
of the ARS and who wander in andout of "interests", hobbies and
activities
searching for something they never find anywhere. Many of these people
are very
adept at causing the ruination of whatever endeavor they happen to soil
with their
presence. AB7RS

Does any one have an idea how to increase the transmission range on those 900 Mhz Cordless Phones? I have an AT&T 900 Mhz Cordless Phone model 9100 I opened the inside metal box which encloses the RF TX/RX circuitry but I'm not getting any signal reading on my scope or meters not from the antenna and not from anywhere inside that mental box now how could this machine transmit almost a block and emitting such a low signal that I can't even detect? please any Information will be greatly appreciated tanks PS: the one block range is when I place the base high on my roof

Penetrox is great stuff, it should be for what it costs.
Cushcraft ships Noalox with their antennas.
Look again carefully and you will see metal specks in the goo.
When you read the info on the Noalox bottle it sounds like it should
work fine .
It seems to be working fine on the Tribander I just overhauled.
Let you concience be your guide.
Good luck.

1 .It permits hams to build cheap and simple rigs for initial experience at homebrew.
2. Recognition of an SOS, although unlikely, and in any mode, not necessarily radio may save a life

Has anyone got any other equal or better reasons? Speak up!

Folks,

Correct me if I'm mistaken, but it seems as if -23V is correct, given
the spirit of the question, the "inverting" setup of the op-amp and and
assumed split power supply with a large enough rail-to-rail voltage.
What say you?

How about a Ford spark coil and a one tube regenerative receiver using a 53 or half a 19 dual triode, can't remember which, around 1930.

A friend and I actually used these state-of-the-art setups to communicate over the 1/4 mile between our houses. But our range was much greater than that, we found out. A legitimate ham about 5 miles away heard us and told us that we not only had the strongest signal he had ever heard but we had it from one end of his dial to the other. Fortunately, he was very friendly and invited us over to see how things should be done; and when he showed us how he could roast hot-dogs in his tank coil, I was hooked.

this
> mod isn't for the faint of heart.

Really? It only involves cutting one diode! It's as simple as removing
the
cover, taking the screws out to loosen the display panel, snipping the
(rather large, easy to get at) diode, then putting all the screws back
in.
Takes about 2 minutes.

Julian

you just gave 100 hams, that paid 50 bucks, a heart attack

Just like a ham tower.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new first couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)

>Most hams carry their license on their person anyway. You are required
>to if you are operating mobile.

Actually when the FCC began allowing operation by people who had
taken exams but only had the information available on one of the
callsign servers as to what the callsign was, the license to physically
have a license on the person, or on the premises also disappeared.
You're quoting old regulations which are no longer applicable.

Hello, Hanoi Dan. I see you're no longer content with being a radio cop on 14.313; now you are going to attempt to police the Internet as well. Must be nice to have no source of employment and, consequently, such an abundance of free time on your hands, Hanoi Dan. But I'm afraid I'm going to have to take you to task on this one. Actually, I have two grounds of contention which I would like for you to respond to:

By notifying me that you have reported my actions to a federal agency, I assume you believe me to be guilty of the commission of a crime. Would you please explain to me, Hanoi Dan, which particular illegal or unlawful act(s) you feel I am guilty of here? I was not aware, Hanoi Dan, that offering an audio clip for download over the Internet constitutes a violation of the rules and regulations of the Federal Communications Commission (FCC.) But I'm sure an expert in communications law such as yourself will consider it a high honor to be able to explain this to me.

Furthermore, Hanoi Dan, could you please explain how it is that the Federal Communications Commission (FCC) has jurisdiction over the content of material which is posted to Internet newsgroups by private citizens.

Waiting anxiously for your explanations, Hanoi Dan.

Turn your head. until the people down the street are paying for the land it's
on, they have no say in what you do with it.

>VEC who doesn't know Ohm's law going to grade an essay exam?

Quite easily. Here's a sample question:

"Fill in the table at the right with the correct entries for a logic
table of an NAND gate."

All entries have to be correct or the question is marked wrong.

Here's another:

"Given an inverting operational amplifier with an input of 2.3 volts,
a feedback resistor of 100k ohms, and an input resistor of 10k ohms,
what would be the output voltage? (See figure 5)"

The only correct answer the examinee could provide is -23 volts. The
included figure for the test question would not leave any doubt as
to the placement of the given resistors.

How about this:

"Sketch the radiation pattern which would result if two 1/4 wave
verticals, spaced 1/2 wavelength apart were fed 180 degrees out
of phase."

(The examinee's diagram should show a figure-8 "end-fire" in line
with the two verticals.)

The examiner, instead of seeing an (a), (b), (c), or (d) on his
answer key, would instead have an answer key with a logic table
for an NAND gate as the answer for question one, -23 volts for
question two, and a figure-8 oriented in line with two points as
an answer for question three. Grading such an exam would be no more
difficult than looking for a correct (a) or (b) or (c) or (d).
An examinee posing a question as to why a particular answer was
marked wrong could be referred to the appropriate study material
(e.g., Chapter 16 of the ARRL Handbook, et cetera).

When I give an exam, there is no subjectivity in how I grade;
for a question such as "Determine the indefinite integral of the
function H(x) = sin(x)*tan(x) with respect to x," either the
student's answer is correct or it isn't. There is no gray
area. Very easy to grade.

I believe the questions to the amateur exams could be written in such
a manner so that subjectivity in grading would not occur.

You missed the point. The VEs are not at fault at all. If a VE is
giving a fill-in-the-blank code exam, the examinee could guess or
randomly choose 7 of the 10 correct answers and end up passing the test.

Hmmm though I looked at the mod I never had any reason to modify my 850 but maybe we're talking about different mods ?? Here's the info:

The All-band transmit modification requires the removal and re-location of a diode on the digital board which is located behind the front panel. The US version of the radio has diode D11 installed, and diode D9 removed. D11 must be removed, and installed in the D9 position. This modification IS NOT for the faint of heart, as it entails removing the front panel, and the digital board. Note that the digital board has solder holes that are through-soldered; that is, there are circuit traces on both sides of the board, so make sure that ALL solder is removed from the holes. This modification will also allow the antenna tuner to tune anywhere the receiver is tuned. This modification should ONLY be performed by those familiar with soldering and de-soldering techniques, and requires patience, and dexterity.

Re-Post because "SOMEONE" deleted the original post!!
(Gee, I wonder WHO would have wanted to do that??? NOT!)

Blake -

Ryan Faricy is roughly a 15 yr old new ham who is still learning. Lay off & stop picking on him.

Do like most others & accept him for what he is. Just a few months ago he earned his new amateur radio license. In the past, when Ryan made statements supporting your often incorrect statements you were very generous towards him.

Now, you are making feeble attacks on Ryan Faricy. This is surprising since according to previous statements you have made here on usenet, he is the only other member (besides you) of your Pottersfield Amateur Radio Group!

It would be far better to sponsor his study & growth in the hobby of radio, rather than make snide insults as you have done to him here. Blake, just because he says things you don't feel are correct is no reason to belittle him or anyone else.

Besides, YOU are hardly one to preach about "facts" given your severe lack of facts in the recent & distant past.

What good is code in todays world anyway? With all the high tech communications ,code is the most outdated system we have. It's not used by the government anymore and wouldn't be used in any type of "disaster" situation. It's only real purpose for being required on the test is partly sentimental value from certain people who want to keep it alive,and to weed out those who don't want or believe code is worth learning to get a tag.

Burt, most folks subscribe to your view of history. But to ascribe those negative qualities to Germans today is no different than tagging all whites as rascists, blacks, reverse rascists, Jews, Christ killers, Italians, organized crime, etc.

Surely someone of your intellect must understand prejudice and its dangers. Though I have personally met strident Nazi sympathizers in modern-day Germany, it is just as much of a mistake to stereotype all Germans as it is, all Americans.

According to scholars, prejudice is passed down in families.

4336. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <742nqh$flc@news.Hawaii.Edu>
Source record: 156686
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Hi guys
I have an old transceiver Kenwood TM-201,
it's only transmit from 142.000-148.995 .
Is it possible to modify to transmiting from 140.000-149.995 .
give me mod.

thanks

Doug,

You can certainly build a working 1/2-wave dipole using an unbalanced
feedline system. I've had a number of them and they work just fine. I
think that there is even an analysis in the Radio Amateur's Handbook
concerning the (small) difference in the radiation patterns of balanced
vs unbalanced dipole systems. There is no editorial mistake to correct.

> was listening for when I noticed the band opening), and in the
> Satellite Subband. It totally obliterated RS-13's signal.

Yes, 10M was wide open. VK's, LU's, V63, T32, KH6,
VK9LX (Lord Howe), etc. All sorts of dx. Of course,
you would have had to gone into the cw portion of the
band and be able to copy your callsign on cw.
CQWW-CW was over the past weekend. 10M was LOADED
with signals.

You have just proven to me that you really do not have a clue about
anything. Calling me a liberal is like calling Clinton a truthfull person.
As for the "freedom of speech" thing....Well you can say what you want, but
you are also responsible for the same. You offered jamming tapes to the
people that are into jamming. No, its not illegal. It only further proves
my allegations that the "Stumpjumpers" are indeed involved in organized
jamming.

Keep up the good work there Drew. HO HO HO HO.

No, more likely the correct answer would be 0.2 volts because the opamp would be saturating as close to its rail as its internal design will allow (assumes opamp is working off a single ended 12 VDC supply, as is common practice). In other words, you haven't given enough information in the question to permit only one answer to be true. If the input signal were AC, you'd also have to provide data on the slew rate of the opamp being used.

To the antenna gurus,

Which is the best anti-oxidant for antenna construction?
Penetrox or Noalox? What have you found is the best?

The Noalox doesn't appear to have the normal
metal particles that provide continuity and tooth
to the beam elements.

Has anyone had problems with this Noalox anti-oxidant?

Source record: 156505

Mr. Whiten sure seems worried! You would think that a man taking a little trip to an exotic place would want to spend every moment possible enjoying the trip! Not true with Rich Whiten! Rich was back on the air this Thurday morning, and was repeating everything that was said about him over the past couple of days!. Poor Rich must have spent the whole time listening to 14.313/300 on his portable shortwave receiver, worried about what was being transmitted about him!

And for good reason! Those tapes of his racist, bigoted transmissions are making their way throughout this great nation! They are being re-broadcast on frequencies all over the amateur spectrum! Why? So people can hear for themselves how far amateur radio has deteriorated!

Mr. Whiten mentioned this Thursday morning how he hopes these "tape broadcasters" are going to get busted by the FCC! Good! That's what we want! We want to get this whole affair into the federal court system! We can't seem to get the FCC to take any actions against WB2OTK, WA9KJI and others, so we're hoping WE can get "busted" so WE can present the evidence before the courts! And if getting a fine or losing my amatuer license means that I can help make the future of amatuer radio a little brighter, so be it!

The FCC will be welcome into my home at ANY time to meet with me! And I guarantee that my attorney and my local ARRL Section Manager will be present when the meeting takes place! Forcing this issue may just bring about a remedy!

Owing to a form of as yet undiagnosed insanity I have decided to start a rest home for RA 17's and there associated parts. That doesn't mean to say I'm going to start running around buying everyone that comes my way, what I'm looking for are those sets that you've been meaning to throw away but haven't had the heart, working or not, they are after all still good sets and do get sold from time to time. I will however consider reasonable prices and please keep in mind that I live in Somerset so collection is going to be an important factor. The sets will not be for re-sale even as spares so don't worry about someone cashing in on your generosity, easy for me to say but true, once I've got em nobody's getting em off me, I may consider passing on parts to other needy soles foc apart from postage, some bits could be heavy. Please email me with the details of what you've got and where you are. Is anyone already doing this ?

Hi Herb,Just curious. How would doubling the voltage change the crystal based oscillator frequency? Also how would doubling the voltage change the 1200 Baud Bell Standard modulation scheme to the CCITT based 2400 modulation scheme.

On the other hand if we reduced the voltage from 5 to 1.25 could we use the modem for rtty? ;-)

Me thinkuth you are tugging our leg.... (grin)

It is dying. It is being kept alive by hams that work for
manufacturers and "hide" code in cellphones. ;-) I suppose you need
to pass a code test to use a Nokia 6162 ???

Code is hidden in all kinds of stuff. We had a UPS in our emergency com
vehicle that beeped out morse to give alarm status. I had to laugh one
time when we let some hams use the truck for a walkathon - and none of
them realized that the UPS was trying to "call" them because the battery
voltage was low. (http://www.ccnet.com/~cwheeler/ercv.html if you want
to see the "old" truck)

Anyone seen "Enemy of the State" yet? Led me to believe that all spy

Dick,

Actually, I think that this is a debating club.... Anyway, I can see
what you mean about the question. What I meant about the "spirit of the
question" was that in an idealized situation, the resistor ratio gets
you a gain of 10, and the "inverting" configuration changes the sign of
the answer. Simple and straight-forward. Admittedly, this is more of a
theory question than an engineering one...

Cheers,

Curt Breneman

SB QST @ ARL $ARLB102
ARLB102 League files "restructuring" comments with FCC

ZCZC AG03
QST de W1AW
ARRL Bulletin 102 ARLB102
From ARRL Headquarters
Newington CT December 3, 1998
To all radio amateurs

SB QST ARL ARLB102
ARLB102 League files ''restructuring'' comments with FCC

The ARRL has filed formal comments in response to the FCC's proposed streamlining of the Amateur Radio rules. The League delivered its comments to the FCC December 1, the final day for comments in the FCC's Notice of Proposed Rulemaking in WT Docket 98-143.

The League's filing promotes the ARRL Board of Directors' restructuring positions, adopted last July and fine-tuned at a special meeting in October. It also takes the FCC to task on a few points. The ARRL said the FCC's NPRM failed to contain ''a comprehensive license restructuring proposal or even an overall review of license restructuring'' and generally ''missed the mark.''

The League called on the FCC to adopt the ARRL Board's restructuring plans as the centerpiece of its streamlining efforts. Among other things, the League plan calls for eliminating the Novice and Tech Plus licenses to reduce the number of license classes from six to four. The ARRL plan automatically upgrades current Novice and Tech Plus licensees to General. The General license would become the entry-level ticket to HF. Existing Novice and Tech Plus HF CW bands would be ''refarmed'' to provide additional phone spectrum for General, Advanced, and Extra class licensees.

The FCC also proposed a four-tier license structure, eliminating the Novice ticket and melding existing Technician and Tech Plus licensees into a common database while allowing current Novices and Tech Pluses to retain their current operating privileges. The ARRL said the FCC was on ''the right track'' in proposing to eliminate the Novice ticket. But the League said its ''instant upgrade'' plan for Novice and Tech Plus operators is a better approach because it permits ''refarming'' the underutilized Novice HF subbands. The League called refarming ''critical to any comprehensive license restructuring proposal.''

The FCC's NPRM sought comments on the issue of Morse code testing and requirements but offered no specific proposals. The ARRL called for a reduction in the number of Morse code examination tiers from three to two--5 and 12 WPM--and changes in the written examinations to make them more relevant and with greater emphasis on current operating practices and newer digital technologies. The League also recommended that the number of written exam questions ''increase incrementally'' for all license classes above Technician.

The League said that Morse code should not be overemphasized in the licensing process, but should be continued as a licensing requirement above the entry level. It has proposed that General class applicants pass a 5 WPM code test, while Advanced and Extra applicants pass the 12 WPM code test. Subsequent to release of its original restructuring plan, the ARRL Board also decided to ask the FCC to permit Technician operators to use Morse code on the General class HF CW segments without passing a specific code examination.

The ARRL said acknowledged abuses of the CW disability exemption process were an enforcement, not a testing, issue. For those claiming a disability waiver for the higher-speed CW test, the League urged testing accommodations as a preferable alternative. The League also urged an end to multiple-choice CW exams and rules specifying that a passing grade for a Morse examination be either 70 percent correct answers to 10 fill-in questions or one minute out of five of solid copy.

The League also praised the ''new dawn'' in amateur enforcement undertaken within the Compliance and Information Bureau by Riley Hollingsworth, K4ZDH. The ARRL suggested that it would be ''reasonable to withhold any further action on amateur enforcement'' for now and let the CIB continue its work.

The ARRL's comments stressed the value of increasing participation in the hobby and making it available to more people. ''By increased participation, Amateur Radio can provide even more service to the United States than it does currently, with a simpler licensing structure,'' the League asserted.

A complete copy of the ARRL's comments in WT Docket 98-143 is available on ARRLWeb at http://www.arrl.org/news/restructuring/ (see ''ARRL's Comments to the FCC on WT Docket 98-143''). Reply comments on the FCC's rulemaking proposals are due January 15, 1999. The FCC is not expected to take action on restructuring at least until sometime next spring.

Hi All,
I get a kick out of the use of the word "radio" to describe what I always thought hams called a "rig". Seems that in recent years, the word "radio" has become common to use as a description for a transmitter, receiver, or transceiver. This is probably due to the increasingly common use of a single "out of the box" radio appliance for the entire ham station. I notice the marketing hype in the mags and even the equipment "reviews" use the term 'radio'. I've always used the word "radio" to mean, as it once did in universally in ham radio, strictly a BC (BroadCast) receiver.
My first rig was a 6V6 tri-tet oscillator, exactly as described in the Dec 1946 issue of QST, except that I built it in March of '55 from an article in "How to Become a Radio Amateur" of the same year. This rig, and a beaten-up and mangled S20R receiver which I found in a hock shop in L.A., enabled me to fill my log book with many many stations all over

the USA, Hawaii, Cuba and Canal Zone on 40 meters, using a 1/4 wave ground plane made of water pipe sitting on a Coke bottle insulator. I still have the XMTR and RCVR today, and they work. About 7 watts out, if carefully tweaked and loaded to whatever antenna you have. The power supply was a sawed-off power supply end of an old BC receiver chassis, a common practice at that time. Perfect novice rig, and I daresay even today it is true.
If one were to build a simple DC, or regenerative, or better yet, a DC phasing-type receiver, coupled with a simple rig like this XMTR, either built with a tube or solid state (either way it is a simple rig) it serves as an excellent starting and cost-effective CW rig today. I know; I use mine on the air. Good rigs all sound the same on the other end, but the $$ spent varies enormously. One simply makes his choices.

73,
Don

4369. Give me a break

Newsgroup: rec.radio.amateur.misc

The ARRL's comments stressed the value of increasing participation in the hobby and making it available to more people. ''By increased participation, Amateur Radio can provide even more service to the United States than it does currently, with a simpler licensing structure,'' the League asserted.

After reading the paragraph above, I suddenly felt a rectal discomfort and had to leave the room for a breath of fresh air. One thing for sure, QST and ARRL membership for me is over. Fortythree years of Amateur Radio has finally become less important to me.

One good thing, there will be plenty of buyers for all the wonderful equipment I will be selling. I feel better already.

Motorboating or picket fencing is a term refering to the rapid flutter on
a signal. Normally associated with VHF/UHF operation.

Fire Bottle: Probably wrong, but far back I think it was refering to
a 250TH or 100TH tube. Its filaments were a BRIGHT white, and the plate
would go fire red at high modulation peaks and heavy CW use.

> If anyone has equal or better reasons for CW speak up!

3. It has been a tradition in my family since the days of Poulsen's
arc, and those fine class B waves. Why mess with a good tradition?
>> I << like it, because of that. Noone else needs to. But, many
do like the tradition and history of it.

4. MY experience has always been that a better class of operator
runs on CW. That does not mean Non-CW folks are not nice, but
just that my experiences have been less than optimal with fone,
in general, over a 30 year period.

5. It is a personal challenge. The tests are easy. Speaking into
a mike or batting away on a keyboard is easy. It takes an op
with some mettle to run some good CW. That mettle does not
come easy, but only with practice and time on watch. You have
to earn it, the old fashioned way....

6. (.....there are others)

ZUT DE NA4G/Bob UP

p.s. Although the days of the SOS are numbering less that 60, I have
had the misfortune to have to hear two of them. One was just an
emergency buoy that floated free of a British sub in the Med.
Sea, and no lives were lost. Sadly, the other incident cost
the lives of 30 seamen, but 2 were saved DUE to that SOS.
That alone makes CW worthwhile in my logbook.

Thx Curt...somebody else who responded to this post said ARRL handbook says to use a balun and people doing it wrong causing inteference give ham a bad name....I talked to an Extra today who says exactly what you say..balun or no balun...it won't make much difference. Said best method would be to raise dipole feedpoint (center insulator) on my mast and use inverted V pattern allowing wires to slant rather than having the whole thing laying on the roof. That's next / / Ferrite rings and AC filtering surge protectors did absolutely nothing to stop inteference...will advise how problem finally cleared for any experiencing similar prob. 73..

They are good at the late of an evening, after the band has
gone quiet, to put some gentle spirit back into ``The Old Man''.
Much better than waving the rettysnitch amok in the air.

> My next question is what is 'motorboating'?

Motorboating is a condition of low frequency oscillation that
occurs in regenerative receivers, as I understand it, by
coupling between the audio stage and back to the detector stage.

It basically puts a low tonality not unlike an old fashioned
inboard motorboat motor at about 100 rpm.

Typically, the fix is to bypass things for audio, or load down
the audio grid (the output of the first interstage audio
transformer) by a resistor of low enough value to stop the
oscillations but not so low a value that the audio output is
cut down markedly.

A properly designed detector and audio stage will not motorboat.

> While I'm at it, I've gotten some conflicting definitions
> of 'fire bottle'. What do you think it means?

That is a generic term for a vacuum tube at filament heat.
(It is hot, like a fire). Lesser vacuum tubes are sometimes
called glowbottles, wherein they don't have so much heat
emanating, but may have a nice glow to the filament.
A typical firebottle might be a classic 50 watter like a 211,
whilst a typical glowbottle might be an '01A, with a soft orange
glow.

Heathkit HW-8, straight key and a two-band dipole made from tv twinlead strung out in the attic. Not an easy rig to work much with as a Novice but I really enjoyed just being to make contacts. I was so excited when I made my first dx contact (Mexico). Used it for about 18 months until I saved enough to buy a more powerful rig.

David Castle has been jamming for six years! And all he's got to show for it from the FCC is "Quiet Hours" for a short time on Saturday night.

Somehow, I don't think a few tape players protesting Mr. Whiten's disgusting amateur radio behavior is going to have much of an impression on "Uncle Charlie".

Bill

4379. Interference on HF, Any suggestions?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-03 00:00:00 UTC

Message-ID: <36673AE1.396C@bit-net.com>
Source record: 156530
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

For the past several weeks I have been observing interference
on the HF band. Here are some of my observations:

1) The interference sounds like raspy static.
2) The signal is several KHz wide.
3) It occurs ~ every 117 KHz.
4) I have tracked it as far down the HF spectrum as 1.9 MHz.
5) It tends to drift in frequency up and down the band.
6) It seems to be several S units louder than the background noise
level, but not a function of the background noise.
7) I have ovserved it on 2 different radios, with all other equipment
turned off (I think).
8) I have observed it outside the house with a loop antenna hooked
to my broadband scanner.
9) It seems always to be present. I have not turned the radio on when
I could not find it.

I suspect it may be leakage from the cable company, but they tell me
that if it were leakage, my TV picture would be degrade. I'm not
entirely sure I aggree with this. And I see evidence of work at 2 of
their polls at the edge of my property in the last few weeks.

Do the characteristics of this signal point to any particular service?
The main problem is that it disrupts my activity on 10 meters. I'm
located in central NH.

Any suggestions would be appreciated.

I'd try to find the S-parameters of the part. HP must have them in
their data books. Trying to guess at the input impedance seems like the
hard way to do it. I've only desiged on paper using a smith chart and
desingning striplne matching networks, but that would be easy to
translate to lumped components. I was given the S-parameters in all
cases, though. Also, you said nothing about the value of inductance
that the ferrite bead provides. Could it be that it's not enough? I
think a few turns of wire around the bead would be better. It couldn't
hurt!

Find a book on RF design. Or ruin your hobby by getting an EE degree,
like me!

Good Luck

If this is a spread spectrum device, then you will likely not get any accurate measurements. That is the nature of spread spectrum. It was developed by the military for stealth communications. (Actually, it was invented, or at least the first treatises were presented by actress Hedy Lamarr, to help make torpedo guidance unblockable by the Germans, but that is another story) It spreads the transmitted intelligence over 100 or so channels, jumping frequencies according to a preset PN code. The result is that at full output, the signal appears, to non spread spectrum receivers, as noise, at a level just barely above the receiver noise floor.

Charles,

Too many IFs. Try it, you'll like it.

Say yer having a six-meteraurora contact with a guy in West Eastville Nebraska.
Just open the map to the Nebraska page, and read the grid square off it.
Don't need to know the lat and long or leave the QSO to get on the internet.

73 de Jack, K9CUN.

I notice that you have conveniently neglected to respond to my other post on this subject, Hanoi Dan. You know...the one where I asked you to explain yourself? Remember? Here, I will refresh your memory, Hanoi Dan:

In article <7411fe$h63$1@nnrp1.dejanews.com>, w4nti@my-dejanews.com writes:

> This is to inform you that I will be forwarding this statement to
> Mr. Hollingsworth at the FCC. You are offering a tape to the jammers so
> they can play it on the frequencies you mentioned. Your intent is to
> create more bedlam and problems. I'm sure Mr. Hollingsworth will be
> interested Drew.

Hello, Hanoi Dan. I see you're no longer content with being a radio cop on 14.313; now you are going to attempt to police the Internet as well. Must be nice to have no source of employment and, consequently, such an abundance of free time on your hands, Hanoi Dan. But I'm afraid I'm going to have to take you to task on this one. Actually, I have two grounds of contention which I would like for you to respond to:

By notifying me that you have reported my actions to a federal agency, I assume you believe me to be guilty of the commission of a crime. Would you please explain to me, Hanoi Dan, which particular illegal or unlawful act(s) you feel I am guilty of here? I was not aware, Hanoi Dan, that offering an audio clip for download over the Internet constitutes a violation of the rules and regulations of the Federal Communications Commission (FCC.) But I'm sure an expert in communications law such as yourself will consider it a high honor to be able to explain this to me.

Furthermore, Hanoi Dan, could you please explain how it is that the Federal Communications Commission (FCC) has jurisdiction over the content of material which is posted to Internet newsgroups by private citizens.

Waiting anxiously for your explanations, Hanoi Dan.

Wake up fella, everyone who has been hamming for any lengh of time is laughing at you.

CW is and will always be the best mode of communications. The only thing wrong with CW is requires some skills that most new comers are unwilling to learn.

Its a good thing no one has to know CW to have sex, our population would dwindle.

Source record: 156588

I am using a Wilson 1000 on my 1998 GMC 1/2 ton pickup truck. I have noticed at highway speeds (give or take 20mph) the whip has an awful bend to it. I tried my SWR meter on it and noticed that the reading goes way up while driving, even though it is excellent while standing still. Is there any specific reason why the Wilson 1000 uses a tapered whip? Would a straight 1/8" whip give me less bend and be more sturdy, thus keeping my SWR in a better range?
When I bought my Wilson 1000 the clerk at the store screwed up and gave me a K40 whip which is a straight 1/8" whip.
Although it was shorter by about 6", I seemed to get more distance than with the tapered whip which I now have. Could this be attributed to the fact that there was less bend with the straight whip? I welcome all suggestions, as I am rather inexperienced to the cb world, although I am learning fast...

You shouldn't mind, then, if I stand in front of your house on the *public*
sidewalk at 4:00 am and exercise my freedom of speech with the loudest sound
system I can find. Maybe a few of the people down the street can switch off in
shifts so we can make it a 24/7 event. If you don't like it, you don't have to
listen to it.
But don't don't worry; We'll all make sure we turn our heads.

Curt,
Your use of two phrases sez it all:

the spirit of the question
assumed split power supply...

Both phrases implie there is too much room
for interpretation by the test taker. Ironically,

someone that is not as knowledgeable as
Gary might simply answer the question on
the basis of what you state should be presumed.
Others, especially those of a significant depth
of understanding could be just as correct by
saying the answer can't be determined because
key factors are not provided.

Cheers,
Bill K2UNK

4417. A Ham's Night Before Christmas

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-03 00:00:00 UTC
From: kn4aq@ipass.NOSPAMatALL.net
Message-ID: <36660cf4.5724250@news.ipass.net>
Source record: 156594

A Ham's Night Before Christmas

(Yet another corruption of Clement Clarke Moore's
classic Christmas tale, this time distorted by
Gary Pearce KN4AQ, and the Raleigh Amateur
Radio Society, Raleigh, NC, December 2, 1996.)

'Twas the night before Christmas,
And all through two-meters,
Not a signal was keying up
Any repeaters.

The antennas reached up
From the tower, quite high,
To catch the weak signals
That bounced from the sky.

The children, Tech-Pluses,
Took their HT's to bed,
And dreamed of the day
They'd be Extras, instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters
For that rare ZK3.

When the meter was pegged
by a signal with power.
It smoked a small diode,
and, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster
Logged a spot of the signal
On the DX PacketCluster,

While I ran to the window
And peered up at the sky,
To see what could generate
RF that high.

It was way in the distance,
But the moon made it gleam -
A flying sleigh, with an
Eight element beam,

And a little old driver
who looked slightly mean.
So I thought for a moment,
That it might be Wayne Green.

But no, it was Santa,
The Santa of Hams.
On a mission, this Christmas,
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax
Right into the shack.

While Mom and I hid
Behind stacks of CQ,
This Santa of hamming
Knew just what to do.

He cleared off the shack desk
Of paper and parts,
And filled out all my late QSLs
For a start.

He ran copper braid,
Took a steel rod and pounded
It into the earth, till
The station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes
In my linear amp...
(Never worked right before --
Now it works like a champ).

A new, low-pass filter
Cleaned up the TV.
He corrected the settings
In my TNC.

He repaired the computer
That would not compute,
And he backed up the hard drive
And got it to boot.

Then, he reached really deep
In the bag that he brought,
And he pulled out a big box.
A new rig? I thought!

A new Kenwood? An Icom?
A Yaesu, for me?!
(If he thought I'd been bad
it might be QRP!)

Yes! The Ultimate Station!
How could I deserve this?
Could it be all those hours
that I worked Public Service?

He hooked it all up
And in record time, quickly
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent.
But the cards and the postage
Will cost two month's rent!

He made final adjustments,
And left a card by the key:
"To Gary, from Santa Claus.
Seventy-Three."

Then he grabbed his HT,
Looked me straight in the eye,
Punched a code on the pad,
And was gone - no good bye.

I ran back to the station,
And the pile-up was big,
But a card from St. Nick
Would be worth my new rig.

Oh, too late, for his final
came over the air.
It was copied all over.
It was heard everywhere.

The Ham's Santa exclaimed
What a ham might expect,
"Merry Christmas to all,
And to all, good DX."

That's nice. Glad you enjoy it. However, this does not justify it's
continued existence as a mandatory testing element for the purposes of
obtaining an amateur radio license.
>>>

CW is not a mandatory testing element for the purposes of obtaining an amateur radio license. Many thousands of No-Code Tech now enjoy the benefits of ham radio without having to know one character of CW.

Passing a CW test will only give them a maximum of almost 17/1000th of 1% more bandwidth to use than what they do now.

4425. what is 'motorboating'?

Newsgroup: rec.radio.amateur.misc
Date: 1998-12-03 00:00:00 UTC
From: Gary Hoffman <gary@carcs3.wustl.edu>

I am continuing my quest to build a ham oprator's
jargon Web page. Thanks to all of you who responded to my
question about '807'.

My next question is what is 'motorboating'?

While I'm at it, I've gotten some conflicting definitions
of 'fire bottle'. What do you think it means?

Thanks.

In my own tests, Spread Spectrum has a much greater range than Digital
or Analog with the same power.

Well Bob, if you would have done a better job of editing, you would
have realized that I didn't write the above sentence. Go back and
read the original message in which you did your follow-up. And
And remember the First Commandment: "Make sure the attribution
line matches the signature."

(My comment read: "CW is the only mode which can be used on any
HF frequency in any HF amateur band. For that reason alone, know-
ledge of code should be mandatory for anyone desiring HF privileges."
Someone@somewhere {you deleted his name} then said "What's the big
deal here? You won't find any CW...." Please use your editor with
care!)

Gimme a break. 90% of the SSB ops couldn't do CW anyway, especially if they're old-timers. When the band fades you sign or lose the contact, whichever happens first, because when the band is gone it's gone for everything. If the bands are crowded the current procedure is to cuss out the offender, not go on CW. How much CW do you hear on 75 meters at night?? If anyone needs it they would...

That's also true. But first, todays equipment doesn't allow mods very easily. I could remove the parts from my old DX20 but I can't even see the parts on my TS870. Second, modern rigs don't drift and chirp or cause key clicks like the old commercial rigs did so no mods are needed. I satisfy my mod urges by buying broken boat anchors at swap meets, but I don't expect modern hams to learn ancient technologies to do this. For most of them it's building antennas or weekend projects, unless they're in the electronics biz. In this I would agree with you, times are a changing....

* NLI amateurs rally for tower exemption;
* Alien hunters, hams join forces

+Available on ARRL Audio News

NORTHWESTERN DIVISION DIRECTOR MARY LOU BROWN, NM7N, SK

Northwestern Division Director Mary Lou Brown, NM7N, of Anacortes, Washington, died December 3, 1998. She was 71. Brown was just re-elected without opposition to a new two-year term on the ARRL Board. Her husband, Bob, NM7M, reports that Director Brown collapsed and died at Los Angeles International Airport, apparently after suffering a heart attack. She was returning from Australia where she had just taken part in the Lord Howe Island, VK9LX, DXpedition.

DXpedition member Nick Hacko, VK2ICV, called Brown was "the most-liked person" on the DXpedition. "Although I knew Mary Lou for only a few days, it was very clear to me and to the other Lord Howe operators that

she was an exceptional person," he said in an Internet posting after learning of her death. He said Brown helped out with all phases of the operation and deserved "a lot of credit for helping the rest of us get a great lot of enjoyment out of our trip."

Brown has been the ARRL Northwestern Division Director since 1995 and was a vice director from 1990 through 1994. She also served as a member of the ARRL Executive Committee.

ARRL Executive Vice President David Sumner, K1ZZ, said Brown was held "in the highest possible esteem" by her peers on the ARRL Board. He noted that Brown was elected to the Executive Committee after just one year as a director, and was re-elected twice. "Her enthusiasm for Amateur Radio extended beyond organizational affairs to on-the-air operating, especially operating with friends," he said. "Anyone who was fortunate enough to able to call Mary Lou their friend--and their numbers are legion, all over the world--knows the true meaning of friendship."

Brown received her doctorate from Columbia University. Before retiring to Washington, she taught physical education at the University of California at Berkeley and served as a department chairperson.

Funeral arrangements are incomplete.

Northwestern Division Vice Director Greg Milnes, W7AGQ, accedes to the position of Director. Milnes also was just re-elected to a new two-year term. The vacancy in the position of Vice Director will be filled in due course by appointment by President Rod Stafford, W6ROD.

LEAGUE FILES "RESTRUCTURING" COMMENTS WITH FCC

The ARRL has filed formal comments in response to the FCC's proposed streamlining of the Amateur Radio rules. The League delivered its comments to the FCC December 1, the final day for comments in the FCC's Notice of Proposed Rulemaking in WT Docket 98-143.

The League's filing promotes the ARRL Board of Directors' restructuring positions, adopted last July and fine-tuned at a special meeting in October. It also takes the FCC to task on a few points. The ARRL said the FCC's NPRM failed to contain "a comprehensive license restructuring proposal or even an overall review of license restructuring" and generally "missed the mark."

The League called on the FCC to adopt the ARRL Board's restructuring plans as the centerpiece of its streamlining efforts. Among other things, the League plan calls for eliminating the Novice and Tech Plus licenses to reduce the number of license classes from six to four. The ARRL plan automatically upgrades current Novice and Tech Plus licensees to General. The General license would become the entry-level ticket to HF. Existing Novice and Tech Plus HF CW bands would be "refarmed" to provide additional phone spectrum for General, Advanced, and Extra class licensees.

The FCC also proposed a four-tier license structure, eliminating the Novice ticket and melding existing Technician and Tech Plus licensees into a common database while allowing current Novices and Tech Pluses to retain their current operating privileges. The ARRL said the FCC was on "the right track" in proposing to eliminate the Novice ticket. But the League said its "instant upgrade" plan for Novice and Tech Plus operators is a better approach because it permits "refarming" the underutilized Novice HF subbands. The League called refarming "critical to any comprehensive license restructuring proposal."

The FCC's NPRM sought comments on the issue of Morse code testing and requirements but offered no specific proposals. The ARRL called for a reduction in the number of Morse code examination tiers from three to two--5 and 12 WPM--and changes in the written examinations to make them more relevant and with greater emphasis on current operating practices and newer digital technologies. The League also recommended that the number of written exam questions "increase incrementally" for all license classes above Technician.

The League said that Morse code should not be overemphasized in the licensing process, but should be continued as a licensing requirement above the entry level. It has proposed that General class applicants pass a 5 WPM code test, while Advanced and Extra applicants pass the 12 WPM code test. Subsequent to release of its original restructuring plan, the ARRL Board also decided to ask the FCC to permit Technician operators to use Morse code on the General class HF CW segments without passing a specific code examination.

The ARRL said acknowledged abuses of the CW disability exemption process were an enforcement, not a testing, issue. For those claiming a disability waiver for the higher-speed CW test, the League urged testing accommodations as a preferable alternative. The League also urged an end to multiple-choice CW exams and rules specifying that a passing grade for a Morse examination be either 70 percent correct answers to 10 fill-in questions or one minute out of five of solid copy.

The League also praised the "new dawn" in amateur enforcement undertaken within the Compliance and Information Bureau by Riley Hollingsworth, K4ZDH. The ARRL suggested that it would be "reasonable to withhold any further [rulemaking] action on amateur enforcement" for now and let the CIB continue its work.

The ARRL's comments stressed the value of increasing participation in the hobby and making it available to more people. "By increased participation, Amateur Radio can provide even more service to the United States than it does currently, with a simpler licensing structure," the League asserted.

A complete copy of the ARRL's comments in WT Docket 98-143 is available on ARRLWeb at http://www.arrl.org/news/restructuring/ (see "ARRL's Comments to the FCC on WT Docket 98-143"). Reply comments on the FCC's rulemaking proposals are due January 15, 1999. The FCC is not expected to take action on restructuring at least until sometime next spring.

FCC PULLS GENERAL UPGRADE

The FCC has pulled back a General Class upgrade from a Kentucky ham because it says the Physician's Certification used to obtain a Morse code testing waiver "is not a valid document." The FCC notified Richard C. Lalone II, KC5GAX, of Fort Campbell, Kentucky, of its action by certified mail November 18. But the Commission stopped short of revoking his license or levying a fine.

An FCC official said that Lalone upgraded at a test session in January 1997. "The doctor's certificate was apparently forged," he said. "The doctor confirmed that he didn't sign it. It wasn't the VEC's fault." The FCC official said Lalone had "let it slip" to another amateur that the certificate was forged and that Lalone failed to answer correspondence from the FCC inquiring into the matter.

A former Texas resident, Lalone, 34, has been told he may no longer operate under General class privileges, his amateur privileges have been returned to Tech Plus, and he has been issued a new license document. The FCC said Lalone's privileges reverted to Tech Plus as of November 23.

The FCC advised Lalone that while it was not pursuing a fine at this time, he could run into problems later if he decides to renew his ticket or to upgrade. At that point, the Commission said, it might later decide to designate the issue for a hearing before an administrative law judge, "in order for the Commission to determine what, if any, enforcement action should be taken and what action to take on the application."

SECTION MANAGER ELECTION RESULTS

Ballots have been counted in contested section manager races, and Missouri has a new section manager. Charles Boyd, KE0K, edged out John Seals, WR0R, 579 to 508 votes, to replace Roger Volk, K0GOB, as Missouri SM. Volk decided not to run for another term. The only other contested race was in the Southern New Jersey section, where incumbent Jean Priestley, KA2YKN, defeated T. J. "Skip" Arey, N2EI, 463 to 243.

Candidates in six other sections ran unopposed and were declared elected. They are Lawrence Ober, W1MW, Eastern Massachusetts; Bill McCollum, KE0XQ, Nebraska; George Tranos, N2GA, New York/Long Island; Leslie Schmarder, WA2AEA, Northern New York; Leslie Shattuck Sr, K4NK, South Carolina; William Edgar, N3LLR, Western Pennsylvania

All elected candidates take office January 1, 1999.

US SIGNS TAMPERE DISASTER MITIGATION CONVENTION

The US joined other governments November 18 at UN Headquarters in signing the Tampere Convention. The international agreement calls on the signing parties to cooperate among themselves and with other organizations "to facilitate the use of telecommunication resources for disaster mitigation and relief."

Thirty-three other countries already have signed the Convention, negotiated in June in Tampere, Finland, at the urging of the humanitarian relief community.

The Tampere Convention will help expedite the movement of telecommunications personnel and equipment into disaster-stricken areas such Honduras and Sudan. US National Coordinator for Tampere Larry Roeder called the accord "a practical instrument for the provision of emergency telecommunications resources." Roeder, a US State Department policy advisor, was chief of the US delegation to the June Intergovernmental Conference on Emergency Telecommunications, which hammered out the Convention.

Signatories to the Tampere Convention agree to end excessive import duties and to minimize administrative and political barriers that could prevent or delay the swift provision across national borders of emergency telecommunications used to locate disaster victims or assisting in transporting food, medicine and supplies. For the first time, signatories also agree to protect relief workers engaging in emergency telecommunications, and their equipment.

For more information and a complete copy of the Convention, see the US government's Tampere Web site, http://www.state.gov/www/issues/relief/tpere1.html.

SAREX MARKS 15th ANNIVERSARY

The Space Amateur Radio EXperiment--or SAREX--program marked its 15th anniversary November 28. On that day in 1983, US astronaut Owen Garriott, W5LFL, was launched into space aboard the shuttle Columbia during the STS-9 mission. "He brought along the first Amateur Radio station on a crew-tended space vehicle," said NASA's Frank H. Bauer, KA3HDO. Bauer is the AMSAT-NA vice president for human spaceflight programs and a member of the SAREX Working Group. Thousands of hams heard W5LFL on 2 meters, and hundreds worked him.

Among those who heard Garriott's Amateur Radio transmissions from space were youngsters at Avery Street School in South Windsor, Connecticut. Lance Collister, WA1JXN (now W7GJ), of Montana is credited with being the first amateur to work an astronaut in orbit.

In addition to random contacts, SAREX has permitted youngsters and youth in classrooms around the world to speak directly with astronauts in space for the first time. Since the inception of SAREX in 1983, Amateur Radio has flown aboard 23 NASA shuttle missions as well as aboard the Russian Mir space station. Students were able to talk directly with astronauts on many of those space flights. The next scheduled SAREX mission is expected to take place next spring.

SAREX is a joint venture of the ARRL, AMSAT-NA, and NASA. ARRL Educational Activities Department Manager Rosalie White, WA1STO, coordinates the SAREX school QSO schedule at ARRL HQ. "SAREX is a very bright star in the Amateur Radio horizon--for schoolchildren, for individual hams and for communities," she said. "It is an activity that

the astronauts tremendously enjoy, because it sparks children's interest in exciting scientific fields, including our great hobby, Amateur Radio."

For more information on the SAREX program, contact Jean Wolfgang, WB3IOS, at ARRL HQ, jwolfgang@arrl.org.

TMSAT-1 NOW AVAILABLE FOR AMATEUR USE

TMSAT-1 (TO-31) now is available for general amateur use. The satellite opened for business the weekend of November 28. The move allows Amateur Radio operators to use the store-and-forward communications transponder on the spacecraft and to download the high-resolution multispectral Earth images taken by the satellite.

Ground station op Chris Jackson, G7UPN/ZL2TPO expressed the hope that ground operators will take advantage of downloading the high resolution multispectral images available from TO-31 "and keep other traffic to a minimum." Due to current limitations with on-board memory, images will only be available on the satellite for a couple of days after they are taken. If other files (especially large files) are uploaded to the satellite, this will ultimately increase the amount of time taken to download images and they may therefore be deleted before they are completed.

Jackson says transmitter problems continue, however, and the downlink is not currently operating over most areas. Amateurs in Europe and Southeast Asia will find the downlink on most of the time, and it will remain on for between 15 and 30 minutes, depending on the operation of the transmitter. Work and testing continue to improve this situation.

During some of these tests, access may be limited to command stations only. Jackson requests that hams not attempt to access the satellite if the BBS indicates it is "SHUT."

The TO-31 downlink frequency is 436.925 MHz, 9600 baud FSK. The uplink frequency is 145.925 MHz, 9600 baud FSK. The BBS call sign is TMSAT1-12; the broadcast call sign is TMSAT1-11.--Chris Jackson, G7UPN/ZL2TPO via AMSAT News Service

ALVIN H. BATTISON, W2IEG, SK

ARRL Western New York Assistant Section Manager and former Vermont SCM Al Battison, W2IEG (ex-W1GNF), of Vestal, New York, died November 19. He was 81. A Dartmouth alumnus and World War II veteran, Battison was a life member of the ARRL. He also belonged to the Antique Wireless Association, the IEEE and the QCWA. As Section Communications Manger for Vermont in the 1930s, Battison provided vital leadership during severe flooding on the Connecticut River. A civil aviator and antique car buff, Battison was more recently known throughout the section for his presentations on radio-controlled sailplanes and early aviation.--Bill Thompson, W2MTA

SOLAR UPDATE

Solar savant Tad Cook, K7VVV Seattle, Washington, reports: HF radio conditions were good over the past week, with moderate geomagnetic conditions and a rising solar flux. Sunspot averages for the week were more than double the week before, and average solar flux was up over 30 points. The high point for the week was on November 29, when solar flux reached 167.8--the highest its been since the beginning of September. Average solar flux for the previous 90 days was 131 and 132, and solar flux was above this level on every day, indicating an upward trend.

Now that November has passed, we can see that solar activity is back up, after a dip in October. Monthly average solar flux for June through November was 108.5, 114.1, 136, 137.7, 117.3 and 138.8.

For December 5-7, look for a solar flux of 150, 148 and 148 with a planetary A index around 10 for all days. After the weekend, solar flux should dip just below 130 around December 9, then bounce around between 130 and 135 until December 17. From December 18 until December 27 flux values should rise to around 150.

N7SO writes to remind us of the NASA Space Weather Bureau Web site at http://www.spaceweather.com, sponsored by Marshall Space Sciences Lab. It contains a lot of data on current conditions as well as a great 10-day animation of the sun at http://www.spaceweather.com/java/solar-anim.html. Don't miss the current image of the aurora updated every seven minutes, as well as information on solar flares.

Sunspot numbers for November 19 through 25 were 57, 58, 55, 56, 56, 74, and 102, with a mean of 65.4. The 10.7-cm flux was 117.9, 121.5, 121.2, 126.1, 129.9, 140.2, and 149.5, with a mean of 129.5. The estimated planetary A indices were 7, 12, 7, 7, 10, 12, and 9, with a mean of 9.1.

Sunspot numbers for November 26 through December 2 were 132, 121, 110, 126, 186, 153, and 144, with a mean of 138.9. The 10.7-cm flux was 156.4, 158.9, 164.8, 167.8, 163.4, 162.7, and 151.7, with a mean of 160.8. The estimated planetary A indices were 11, 8, 5, 6, 13, 13 and 4, with a mean of 8.6.

IN BRIEF:

* This weekend on the radio: The ARRL 160-Meter Contest, the QRP ARCI Holiday Spirits Homebrew Sprint, and the TOPS Activity 3.5 MHz CW Contest are on tap for this weekend. Just ahead: The ARRL 10-Meter Contest and the Great Colorado Snowshoe Run are the weekend of December 12-13. See December QST, page 95, for details. (Complete rules for the ARRL 160-Meter and 10-Meter contests appear in November QST.)

* DC multiplier in the ARRL 10-Meter Contest: Thanks to the hospitality of the Voice of America Amateur Radio Club, the Potomac Valley Radio Club (PVRC) will activate K3VOA for the District of Columbia (DC)

multiplier in the ARRL 10-Meter Contest, December 12-13. The multi-operator team will be active on both CW and SSB. Contest QSLs only go to W3LEO. Include an SASE.--W3LEO

* Vanity update: The FCC in Gettysburg reports it has processed vanity call sign applications received through November 5. In the latest run, the FCC granted 210 applications. Another 266 hit the work-in-process, or WIPs, stack for further processing.

* FCC issues warning on tower lighting: The Federal Communications Commission has warned owners of antenna structures to comply strictly with FCC antenna tower lighting and marking rules. The warning followed a recent nighttime incident in Texas where a helicopter ambulance nearly hit an unlighted radio tower. The FCC notes that tenant licensees, such as repeater owners, are secondarily responsible for tower lighting. The FCC will hold a public forum December 7, 2-4:30 PM ET (with live audio available on the Internet at http://www.fcc.gov/realaudio/) to examine the Year 2000 (Y2K) impact on tower lighting and lighting equipment. Forum materials will be posted to the FCC Y2K site, http://www.fcc.gov/year2000.--FCC

* NLI amateurs rally for tower exemption: The Peconic Amateur Radio Club marshaled support from the Long Island, New York, amateur community to respond November 10 at a meeting of the Southold Town Board to rewrite a local antenna law. Before the meeting, Don Fisher, N2QHV, distributed to Town Board members copies of PRB-1 and a statement of the amateurs' concerns about the inclusion of "all towers" in a rewrite of the antenna law. Nearly 40 people participated in an impressive march on Town Hall. The Suffolk County ARES/RACES meeting was relocated to Southold so that hams from other towns on Long Island were able to express their concern and support. ARRL Hudson Division Director Frank Fallon, N2FF, attended to speak on PRB-1. Ralph Williams, N3VT, gave testimony as an antenna expert and member of the Historical Landmark Preservation Board. Fisher reminded the Town Board of Amateur Radio's mission of support to the town in times of emergency, the hobby's noncommercial status, and the protection given to amateur radio by PRB-1. As a result, the Southold Town Board was favorably influenced to place a specific exemption in the law for amateur radio towers.--Roberta Keis, N2RBU, via The Hudson Loop

* Alien hunters, hams join forces: The SETI League, which supports a privatized search for extraterrestrial intelligence--has announced its affiliation with the Central States VHF Society. Plans were formalized at the annual Central States VHF Conference this past summer for each organizations to join the other as a member society. The two organizations each have several hundred members. Central States Board Chairman Gerald Handley, WA5DBY, called it "a logical affiliation." He said the groups hope to collaborate in "applying the very latest in radio technique to the challenge of interstellar communications." SETI League Executive Director Paul Shuch, N6TX, has served two terms on the Central States board and has been a regular speaker at the society's annual conference for the past 15 years. For more information, see

http://www.setileague.org.--The SETI League

==========
The ARRL Letter is published Fridays, 50 times each year, by the
American Radio Relay League, 225 Main St, Newington, CT 06111; tel
860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President;

Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective within three business days. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe.

(NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

A better method of biasing an RF grounded emitter device is to use a cheap
low frequency PNP as a current source into the NPN's base. Obtain feedback
for the current source from the NPN's collector current.

```
_______Vcc
| |
| R
| |---------- bypass
R |/ |
-----| pnp )
R |\ ( collector feed (coil, choke, res)
| | )
g R |-------->
| |/
>-----*-----| npn
|\
|
g
```

Also bypass the pnp base. Temperature compensation may be added with a
diode in the resistive divider setting up the pnp base voltage.
(I hate ASCII schem's, g=gnd R=res)

Hi,

Thank you very much for all of you who replied to my post regarding tuning a RF transistor. Let me give you an update and some other questions.
I tried the s-parameter method together with real measurement and smith-chart, and finally got the transistor tuned to match input closed to 50ohm. However, it is difficult to tune the output. I have a LC circuit at the input (base -> series coil -> shunt cap -> coupling cap -> input) and a pi-network at the output (collector -> shunt cap -> series coil -> shunt cap -> coupling cap -> output). I could increase the value of the shunt cap closed to the collector to lower s11, but then it increased s22. Then I increased the shunt cap closed to the output, it can lower s22, but then the input get mistuned. At last I decided to tune the input for 50ohm match and let the output mis-tune a little bit, which can be compensated by tuning the antenna or TX/RX switch.
Another question I came across when tuning is: I have to increase the bias voltage to get the transistor well tuned. Right now I have a resistor divider network like this:

```
Vbb (set at around 3.5V)
|
1k
|
o--1k--FerriteBead(coated wires wrap around a ferrite ring)--51ohm--Base
|
1k
|
GND
```

I can increase the bias to set base voltage at around 0.69V. When I have a +5dBm signal at the input, the transistor outputs +25dBm (which is what I want) at Icc=170mA. However, when I remove the input signal and put a 50ohm termination, Icc raises to 230mA. Is that normal? What have I done to make it operate this way? Am I driving the transistor too hard? Thanks.

Artur

I second that. The education greatly enhanced the hobby for me. It gave me the tools to understand a lot more of what I was doing and about the things I'm interested in. I got my degree 17 years after first becoming a ham, and I've been a ham for the 24 years since. I get a chuckle out of the "engineers vs hams" comments I occasionally see -- I'm most definitely both!

There are some longer-range phones available. In the GHz range. See national
magazines for advertising. "Goes a country mile....slightly less in the city."

On your present unit, increasing the power at the base unit will not address
the problem of the handset getting back over the greater distance.

Tune from 28.190 to 28.300 and listen for beacon stations. These are low-powered CW transmitters whose purpose is to announce their presence. When you hear beacons coming in at your location, you can be assured that 10 meters is open in the direction of the beacon station.

Beacon operators solicit reception reports. Many include their e-mail address in the beacon message.

I forgot to mention in what regard it's 'better'. That being, it is not
highly dependant on your NPN Bf or Is. In production the simple divider
will produce a wide range of currents with lot to lot device tolerances.

>teeth using CW. Like riding a bicycle, it's something you never forget
>(although you do lose some speed, which is easily regained after a
>few QSOs). Jeff KH6OO

Well admittedly I guessed at the 90% figure. In my own experience, all (100%) of the guys that I know that got their ticket around when I did (1957) can no longer do any CW, or at least that's what they say when I try to get them to go there. Further an Extra I know that got his ticket in 1991 told me that he can no longer do CW. I suspect that a lot of hams only learn code because they have to, and abandon CW for phone right away after they get the ticket. Eventually when CW is eliminated as a weeder even less will use or know CW.

CW is self testing as the ARRL said so even if the code test is eliminated, it won't affect the present CW ops. If you don't know CW you won't be able to work us. CW is certainly more enjoyable if voluntary and not forced. That's how I got back into it and probably why I now enjoy it more than the old days.

For the first 30 years of my ham career I didn't do much CW and I was real rusty. But about 10 years ago the bug bit (pun intended) and I have been on nothing else since. I never will be a speed demon though as 40 wpm is my barrier. (In my head...I never use paper. It would be much slower if I had to use paper.) However most of the CW ops I work do between 20 and 30 wpm so that has never been a problem.

So I don't see any great advantage in posters assertion that CW is the only mode that can go anywhere. The big advantage to me is that it is fun, and clean. The true ham radio of old...

I'm getting something here (Seattle) in a slightly different form, (same timing though, so it makes me think it's the same stuff). It adds a tinkle like sound to the weaker shortwave broadcasts, which I interpet as the beat from a high speed FM signal. Judging by the way it beats with fixed signals, there's a comb spectrum of signals. About every 10 kHz, but not exactly, as the tone of the beat with the other signals shifts as you tune across the band. The modulation seems to be in the 5-10 Hz range.

My guess is that it's a new over the horizon radar. The return of The Woodpecker in a slightly less obnoxious form.

Sure:
3. 20wpm CW uses less than 100 Hz bandwidth.
4. It's the only mode all the world's HF-licensed hams have in common.
5. It's the only mode permitted on every HF frequency on every HF ham
band. (That in itself is a sufficient enough reason for anyone desiring
HF privileges to know code.)
6. Scanning any HF band will show around 50% of the QSOs are conducted
using CW.

Yesterday, our office's paper shreader, having been unused for a few
minutes, beeped out a "CQ"!! I was stunned - I stood there staring
at it in disbelief.

I don't have any data on that transistor in front of me, but its
stability factor, k is less than 1 at low frequencies. That means
you cannot use lossless matching to get a simultaneous
conjugate-match at both the input and output with that transistor
as-is. If you try, it will oscillate.

From the transistor S parameters, you can calculate and plot
input and output "stability circles" on a Smith Chart, for the
transistor over those frequencies where k<1. These are regions
of input and output impedances that will cause the transistor
to oscillate. You need to assure that the transistor will never
see those impedances, regardless of what loads are applied at
the far end of your I/O matching circuits.

One way to do this is to add a resistor somewhere in the
matching network. For example, if the region of instability
is <10 Ohms, you can put 10 Ohms in series, and assure the
transistor will always be stable. If the region of instability
is >500 Ohms, you can put 500 Ohms in shunt to assure stability.
If you're looking out-of-band, then you can make the
network so that the resistors do not affect in-band performance.
You can work with either the input or output stability.
As you make one stable, the other becomes stable also.

Another way to stabilize the amplifier is to modify the
S-parameters of the "transistor" by introducing feedback.

I'd look at biasing the transistor with RB1 from Vcc
to the base and RB2 from the base to ground. Design RB1
to carry 5 times the base current and RB2 4 times the base
current. Look to see if leaving the resistors in the
RF path helps stabilize it. If not use a bias choke.

The S-parameters should be available at HP's website.
I think there are some free analysis software tools
there too.

You're well aware that the question pools consist of queries that
do not necessarily reside in a real-world setting. The above question
is similar to E7D11 in the Extra Class question pool (except they
use a 1k value for R-in and a 10k value for R-feedback).

Another example of a question from an ideal-world setting would be:
E2C02 When operating during a contest, which of these standards
should you generally follow?
Answer: Always listen before transmitting, be courteous and do not
cause harmful interference to other communications.

A question such as that should *not* be one designated as a fill-in-
the-blank, nor should:

E2C03 What is one of the main purposes for holding on-the-air
operating contests?
Answer: To enhance the communicating and operating skills of
amateurs in readiness for an emergency.

When I wind an air-core inductor by hand, I know the coil will not have
